Solving the collaboration paradox: Survey shows how teams can save time with AI

Zoom commissioned a Morning Consult survey in August 2023 to see how workers feel about collaboration, AI, and the future of work, and how to thrive. We're breaking down the results and what intelligent companies should be most up to date learning now with AI-powered tools and workplace strategies that can save time and boost productivity.

In this report

01 Solving the collaboration paradox with AI

02 Saving time is a top benefit of AI

03 Employees significantly more hesitant toward AI than leaders

04 Overcoming barriers to adoption: Companies may be holding their own teams back

05 Next steps: Preparing for success with AI

Share this post

Morning Consult conducted this survey on behalf of Zoom from August 4–8, 2023, among 2,200 adults ages 18 and older in the United States. The interviews were conducted online, and the data were weighted by education, age, race, sex, and region to reflect the demographic composition of the United States.

Solving the collaboration paradox with AI

Modern collaborative teams need to find ways to collaborate effectively when they don't or to be able physically be in the same location. Fortunately, AI can help bridge the gap between in-person and remote collaboration. Here's how AI can help your team collaborate effectively:

- **Offer AI leaders and SMEs** an employee panel or town hall where a small group can share and learn from AI strategies
- **Create AI champions** who can empower and help drive updates on projects to teammates and share what they've learned

The majority of leaders and employees spend at least a few times a week working remotely or in a hybrid environment

Sharing work and ideas from anywhere

Providing clear, actionable feedback and collaboration

Some teams may see resources or even support efforts like standing meeting notes or action items, but they may not have the most effective collaboration. When teams don't get to work together in person, it can be challenging to build trust, share ideas, and work together effectively. Luckily, AI can help bridge the gap by adding activities and focus on teamwork. Learn how AI-powered tools can help teams collaborate and overcome the challenges of working remotely.

Work like AI collaboration can help teams work better, more productive, and more engaging.

Here's how the collaboration paradox—having to work in person to be more productive—can help solve the challenges of working remotely:

- **Leaders have the ability** to increase collaboration with AI tools
- **SMEs say they have some skills** to share with their teams
- **Employees want to learn** how AI can help them work in the same location

Team leaders say AI has positive effects on working together

Saving time is a top benefit of AI

When employees and leaders were asked to identify which benefits of using AI at work were the most helpful, they ranked saving time at the top. Whether it's improving the quality of meetings or boosting team productivity, AI can help save time by:

- **SMEs or employee panelists** having team meetings and training more time to focus on AI-powered tools and strategies
- **Leaders can support learning** more than the workplace challenges and benefits of AI

According to employees and leaders, the top benefits of AI for collaboration are:

Likewise, leaders echoed teams can fit all work-wise while results from the use of AI tools.

- **76%** of leaders agreed their coworkers have been more productive since using AI tools
- **76%** agreed they welcomed digital upskilling

Most leaders agree their teams are positively impacted by AI

By automating or getting assistance with some of these low-value, employees can focus their time and efforts on more meaningful activities that increase output, drive revenue, and eliminate hours the leaders spend managing employees.

Leaders can also help employees learn how to use AI in a way that's beneficial at work. You're right on one thing, and it's a key area that's worth leveraging. Employees are interested in using AI tools for efficiency and productivity, but leaders can help employees learn how to use AI tools in the best way at work.

The three biggest challenges employees identified are:

The three biggest leaders identified are:

The benefit of saving more time to focus on other things it seems isn't the results – people who are currently using AI tools at work say it saves them time. Interestingly, leaders who say it's at work as a benefit are more likely to use AI tools. **SMEs** can help support these tools and ensure that they are being used at full potential.

Time saved by AI

Leaders have the most to gain from saving time with AI

Leaders and their teams can spend hours and hours on one-on-one meetings that can be streamlined with AI tools. Leaders can also use AI tools to help them prepare for meetings, projects, and follow-ups. That's especially noticeable if the they could use more time to learn in their role.

- Nearly **80%** of leaders say they could use more time to learn in their role
- **80%** of leaders say they spend more time on it than they want to

Leaders spend more time than they want to on role or repetitive tasks.

Two-thirds of leaders indicate they could use more time to train dogs.

The opportunity cost being paid by AI avoidance

On the other hand, those who don't see AI at work won't recognize how much time they could potentially be saving.

While leaders may be concerned about how much time they could be saving using AI tools, employees and SMEs of leaders who don't use AI tools may not realize how much time they're losing out on. Employees who don't use AI tools at work are more likely to say they don't have time to learn how to use AI tools at work.

Those who don't use AI don't recognize the potential for time savings.

Employees who don't use AI don't recognize the potential for time savings.

Out of those who don't use AI, **40%** of leaders and **38%** of employees said they'd be open to it in the future. Leaders who don't use AI tools at work are more likely to say they don't have time to learn how to use AI tools at work (39%) compared to those who say they're interested in it (40%). Leaders who don't use AI tools at work are more likely to say they're interested in it (40%) compared to those who say they don't have time to learn how to use AI tools at work (39%).

What would it take to make them AI-curious?

Employees and leaders have similar ideas about what they would like to see more time to free up their time for AI tools:

- Employees
  - Increasing access to company tools and **SMEs**
  - Learning how to use AI tools in their role **(39%)**
  - Learning how to integrate AI tools into workflows **(38%)**
- Leaders
  - Increasing access to company tools and **SMEs**
  - Learning how to use AI tools in their role **(39%)**
  - Learning how to integrate AI tools into workflows **(38%)**

Employees significantly more hesitant toward AI than leaders

There's an overwhelming gap between leaders and employees when it comes to how familiar and excited they are about AI.

- **SMEs** of leaders said they have the same level of AI skills more than half of them saying they have more AI skills than their employees
- **SMEs** of leaders said they were excited about AI, compared to **57%** of employees

Leaders and employees have different levels of AI skills

Leaders are excited about AI, employees are not

Familiarity with the technology might have something to do with it – people tend to be excited about AI in the workplace when they're familiar with it. Leaders are more likely to be familiar with AI tools at work and excited by its uses.

- **SMEs** of leaders said they were familiar with AI, with nearly half of leaders describing themselves as "very familiar." In contrast, only **43%** of employees said they were familiar with AI tools.
- Leaders are 8 as well as more than twice the rate of employees, **79%** of leaders said they were excited about AI, compared to only **43%** of employees who said the same.
- **SMEs** of leaders said they were familiar with AI tools at work and excited about its uses, while only **43%** of employees said they were familiar with AI tools at work and excited about its uses.

Employees, leaders split on drawbacks

Out of wondering that as a whole employees see more drawbacks to using AI and what their leaders. Their biggest concerns are inaccurate information (**39%**), cybersecurity risks (**38%**), and bias and discrimination (**37%**). Leaders, on the other hand, are more concerned about AI's ethical implications like how they would have to be kept up with when it comes to using AI.

- Potential of inaccurate use data **(39%)**
- Cybersecurity risks **(38%)**
- Bias and discrimination **(37%)**

Leaders see drawbacks to a slightly lesser degree, and their perceived drawbacks are related to employees' concerns. Leaders are most concerned about AI's ethical implications and inaccurate data.

- Potential of inaccurate use data **(39%)**
- Cybersecurity risks **(38%)**
- Bias and discrimination **(37%)**

Among respondents who don't use AI at work, leaders and employees were evenly split on the issue of AI's ethical implications and inaccurate data. Leaders are more likely to be of the opinion that AI can help at work to remove bias from work.

28% vs. **16%**

Leaders who don't use AI at work were more likely than employees to say they don't have to.

Leaders | Employees

This is a surprising discovery as a whole, leaders seem more hesitant on AI and its benefits. However, leaders who don't use AI at work are overwhelmingly more conservative on AI benefits and more likely to see AI's potential for inaccurate data and bias as a reason to avoid it.

Employees are more likely to be leaving work because AI – APAC countries in general showed more excitement. U.S. employees showed more mixed feelings, with 47% indicating they would be more likely to leave their employer because of AI, while 53% said they would not be more likely to leave because of AI.

Overcoming barriers to adoption: Companies may be holding their own teams back

A lot needs to be learned about how using AI tools in the **SMEs** leaders want to learn workplace **SMEs**, and how employees can leverage AI tools to help them work more effectively.

Among those who don't use AI at work, leaders more than twice as likely as employees to say they don't have a need to use it. But employees may be the reason for their unwillingness: not providing clear and actionable feedback on AI tools at work.

Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Employees who don't use AI at work are more likely to say they don't have a need to use it more than leaders. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Despite having an overall positive view of AI, leaders recognized potential barriers to adoption that employees may face, including:

- **79%** of leaders say teachers to their team using AI to evaluate their work in tasks to achieving their goals
- **80%** say their work wouldn't have time to learn
- **80%** say it's because their team isn't savvy with technology

Reasons for not using AI at work

SMEs in leaders believe at least some training is necessary to execute on their company, utilizing the right tools, and leveraging AI to its full potential. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

In talking to them that we're doing the same process currently available for those who use AI at work. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Training and education should be part of onboarding employees how to use their potential at at their company. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Next steps: Preparing for success with AI

As with any new technology, there's bound to be some hesitancy and concerns. But AI can be a powerful tool for empowering teams when they're ready to incorporate its efficient collaborating for them while it does it for them. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.

Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams. Leaders can help employees learn how to use AI tools at work by creating a plan for **SMEs** to be **SMEs** and share their knowledge with their teams.
