

## VENDORS OF BENEFICIAL ORGANISMS IN NORTH AMERICA

Jen White and Doug Johnson, Extension Entomologists

This publication is an update of Entfact-125, completely updating the list of vendors, their contact information, and the beneficial organisms they provide. The authors would like to thank Mr. Larry G. Bezark and the California Biological Control Services Program for graciously providing some of the information included in this publication.

Inclusion in this publication does not imply any endorsement nor does exclusion imply any criticism of suppliers or their products. Microbial, or single-celled, organisms (BeBp, CGB, FBt, GPBb, LBt, ONI) are considered pesticides under current government regulations. Before using these biologicals, consult your county Extension agent for information concerning legal use.

### Introduction

Current attitudes in the United States concerning food safety and environmental quality have raised the general public's interest in alternative (non-synthetic pesticide) pest controls. Although unknown to most people, research and implementation of biological control projects has a long history in the United States. The year 2010 marks the 121st anniversary of the importation and release of the Vedalia beetle into the citrus groves of California. This "lady beetle" predator single-handedly reduced a major pest (Cottony Cushion Scale) to sub-economic levels. Kentucky also has successfully utilized biological control. Importation and release of parasites and management of a fungal disease have greatly reduced the first generation of alfalfa weevil.

Although the use of one living organism (beneficial) to control another (pest) works, it can be quite complicated. Simple purchase of a beneficial organism may not be the answer to your pest problem. However, if you are willing to experiment and learn, you may find that use of the various forms of biological control provides good pest control.

### Conditions for Success

Biological control (biocontrol) is very different from the use of insecticides for controlling insect pests. Biocontrol is less harsh on the environment and is safer for people to handle, but is more complicated to implement. Unlike chemical insecticides, biocontrol organisms, called beneficials, are alive. They have behaviors that must be understood and are subject to the same adverse environmental factors as are the pest insects.

For best success, ensure that there is some prey (food) for your beneficial organisms to feed on. (Pest insects are the food source of beneficials.) If beneficial organisms are released into an area with no prey, they will either leave in search of prey or die of starvation. Second, use as little insecticide as possible. Beneficials will be killed just as easily as pests by these materials. Additionally, because pest insects are prey (food) for beneficials, killing the pests removes the beneficials' food source. Therefore, beneficials are hit twice as hard as pests by

any insecticidal application. As you become more adept at using beneficials, you will find that there are some "insecticides" that may be employed with no, or slight, harm to your beneficial insects.

The following list of vendors includes both producers of beneficial organisms (insectaries) and distributors. Because these are living organisms, storage and shipment conditions can affect the quality of the organisms, which in turn will affect their ability to control pest insects. When ordering, you should ask the vendor questions such as 1) Will the beneficial organisms be shipped directly from an insectary? 2) If not, how long have they been stored prior to shipment? 3) How are the beneficial organisms shipped? 4) What will the beneficial insects look like when they arrive, and how can you, the customer, evaluate their quality? 5) Are there "best practices" for releasing your organisms that give them the best chance for success? Some vendors have a lot of information about beneficial organisms on their web sites, and many will send tips for successful use of the organisms along with shipment. For more information on biological control, here are some other helpful web sites:

Last updated: 9/28/2010

Comments, corrections and updates are welcome. Please contact Jen White at the Entomology Dept., University of Kentucky

## BENEFICIAL ORGANISMS CURRENTLY AVAILABLE

Each beneficial organism has been assigned a code that indicates the usual use of that organism. For example, organisms used to control aphids all have codes that start with Ap. Where many beneficial organisms are listed for controlling the same group of pests, the beneficials may differ in which pest species are attacked, life stages (eggs, larvae, etc) of pest attacked, or optimal environmental conditions. Please consult with the vendor about the best beneficial organism(s) for your particular situation.

### Aphid control

ApAb	<i>Aphelinus abdominalis</i> -- parasitic wasp
ApAc	<i>Aphidius colemani</i> -- parasitic wasp
ApAe	<i>Aphidius ervi</i> -- parasitic wasp
ApAm	<i>Aphidius matricariae</i> -- parasitic wasp
ApAp	<i>Aphidoletes aphidimyza</i> -- parasitic midge

### Beetle control

BeAc	<i>Anisopteromalus calandrae</i> -- wasp for stored product beetles
BeBp	<i>Bacillus papillae</i> -- bacterium for Japanese beetle
BeHb	<i>Heterorhabditis bacteriophora</i> -- parasitic nematode
BeHm	<i>Heterorhabditis megidis</i> -- parasitic nematode for black vine weevil
BePf	<i>Pediobius foveolatus</i> -- parasitic wasp
BePN	unspecified parasitic nematodes
BeSk	<i>Steinernema kraussei</i> -- parasitic nematode for black vine weevil
BeXf	<i>Xylocoris flavipes</i> -- predatory bug for stored products beetles

### Crown gall control

CGB	<i>Agrobacterium radiobacter</i> -- bacteria
-----	--

### Fly control

FAC	<i>Atheta coriaria</i> -- rove beetle for fungus gnats
FBt	<i>Bacillus thuringiensis</i> 1 -- bacterium
FDi	<i>Diglyphus isaea</i> -- parasitic wasp for leafminers
FDs	<i>Dacnusa sibirica</i> -- parasitic wasp for leafminers
FH	Hister beetles -- for filth flies
FHa	<i>Hypoaspis aculeifer</i> -- predatory mite for fungus gnats, also collembola, nematodes
FHm	<i>Hypoaspis miles</i> -- predatory mite for fungus gnats
FMr	<i>Muscidifurax raptor</i> -- parasitic wasp for filth flies
FMrs	<i>Muscidifurax raptorellus</i> -- parasitic wasp for filth flies
FMz	<i>Muscidifurax zaraptor</i> -- parasitic wasp for filth flies
FNv	<i>Nasonia vitripennis</i> -- parasitic wasp for filth flies
FP	unspecified fly parasites
FS	<i>Spalangia</i> sp. -- parasitic wasp for filth flies
FSc	<i>Spalangia cameroni</i> -- parasitic wasp for filth flies
FSe	<i>Spalangia endius</i> --parasitic wasp for filth flies
FSf	<i>Steinernema feltiae</i> -- parasitic nematode for flies, also ants, pest nematodes
FT	<i>Trichomalopsis</i> -- parasitic wasp for filth flies

### General Predators and Parasites

GPAb	<i>Adalia bipunctata</i> , Two-Spotted Ladybeetle
GPBb	<i>Beauveria bassiana</i> -- fungus
GPCM	<i>Stagmomantis carolina</i> , Carolina Mantis
GPLG	<i>Chrysoperla carnea</i> or <i>rufilabris</i> , Green Lacewing
GPHa	<i>Harmonia axyridis</i> , Asian Ladybeetle

GPLB	<i>Hippodamia convergens</i> , Convergent Ladybeetle
GPMPB	<i>Orius insidiosus</i> or <i>laevigatus</i> , Minute Pirate Bug
GPN	Unspecified generalist parasitic nematodes
GPPM	<i>Tenodera aridifolia sinensis</i> , Praying Mantis
GPSC	<i>Steinernema carpocapsae</i> , parasitic nematode
GPSSB	<i>Podisus maculiventris</i> , Spined Soldier Bug

### Lepidopteran (moth, butterfly, caterpillar) control

LBt	<i>Bacillus thuringiensis</i> k -- bacterium
LBh	<i>Bracon hebetor</i> -- parasitic wasp of larvae
LCp	<i>Cotesia plutellae</i> -- parasitic wasp of larvae
LGl	<i>Goniozus legneri</i> -- parasitic wasp for navel orangeworm
LSr	<i>Steinernema riobravis</i> -- parasitic nematode, also attacks weevils
LT	<i>Trichogramma</i> sp. -- parasitic wasp of eggs
LTb	<i>Trichogramma brassicae</i> -- parasitic wasp of eggs
LTm	<i>Trichogramma minutum</i> -- parasitic wasp of eggs
LTpl	<i>Trichogramma platneri</i> -- parasitic wasp of eggs
LTpr	<i>Trichogramma pretiosum</i> -- parasitic wasp of eggs

### Lygus bug control

LyPd	<i>Peristenus digoneutis</i> -- parasitic wasp
------	--

### Mealybug control

MbAp	<i>Anagyrus pseudococci</i> -- parasitic wasp
MbCm	<i>Cryptolaemus montrouzieri</i> , Mealybug Destroyer beetle
MbLd	<i>Leptomastix dactylopii</i> -- parasitic wasp

### Mite control

Mi	unspecified predatory mites
MiAa	<i>Amblyseius andersoni</i> -- predatory mite
MiAf	<i>Amblyseius (Neoseiulus) fallacies</i> -- predatory mite
MiFa	<i>Feltiella acarisuga</i> -- predatory midge
MiGh	<i>Galendromus helveolus</i> -- predatory mite
MiGo	<i>Galendromus occidentalis</i> -- predatory mite
MiGp	<i>Galendromus pyri</i> -- predatory mite
MiMl	<i>Mesoseiulus longipes</i> -- predatory mite
MiNc	<i>Neoseiulus (Amblyseius) californicus</i> -- predatory mite
MiPm	<i>Phytoseiulus macropilus</i> -- predatory mite
MiPp	<i>Phytoseiulus persimilis</i> -- predatory mite
MiSs	<i>Scolothrips sexmaculatus</i> , Six-Spotted Thrips
MiSp	<i>Stethorus punctillum</i> , Spider Mite Destroyer -- beetle

### Orthopteran (grasshoppers and crickets) control

ONI	<i>Nosema locustae</i> -- microsporidian
OSs	<i>Steinernema scapterisci</i> -- nematode for mole crickets

### Pollinators

PB	<i>Bombus</i> sp. -- Bumblebee
PBi	<i>Bombus impatiens</i> -- Bumblebee
PBo	<i>Bombus occidentalis</i> -- Bumblebee
PMB	Orchard mason bee

### Scale control

ScAp	<i>Aphytis melinus</i> , Golden Chalcid -- parasitic wasp
ScCn	<i>Cybocephalus nipponicus</i> -- predatory beetle
ScM	<i>Metaphycus</i> spp. -- parasitic wasp for soft scales
ScRI	<i>Rhyzobius (Lindorus) lopanthae</i> , Scale Destroyer beetle

### **Snail control**

SnRd *Rumina decollata*, Decollate Snail  
only available for 12 CA counties

### **Thrips control**

TAc *Amblyseius (Neoseiulus) cucumeris* -- predatory mite  
TAd *Amblyseius degenerans* -- predatory mite  
TAs *Amblyseius swirskii* -- predatory mite, also for whitefly

### **Weed control**

WdAm *Aceria malherbae* -- mite for field bindweed  
WdAa *Agonopterix alstroemeriana* -- moth for poison hemlock  
WdAc *Aphthona cyparissiae* -- flea beetle for leafy spurge  
WdAf *Aphthona flava* -- flea beetle for leafy spurge  
WdAl *Aphthona czerwinae (lacertosa)* -- flea beetle for leafy spurge  
WdAn *Aphthona nigricutis* -- flea beetle for leafy spurge  
WdAp *Aplocera plagiata* -- moth for St. Johnswort  
WdBo *Bangasternus orientalis* -- weevil for star thistle  
WdCa *Cyphocleonus achates* -- root weevil for knapweed  
WdClu *Calophasia lunula* -- moth for toadflax  
WdCli *Ceutorhynchus litura* -- stem weevil for Canada thistle  
WdCq *Chrysolina quadrigemina* beetle for St. Johnswort  
WdEv *Eustenopus villosus* -- weevil for yellow starthistle  
WdGp *Galerucella pusilla* -- leaf beetle for purple loosestrife  
WdGa *Gymnetron antirrhini* -- seed weevil for toadflax  
WdLm *Larinus minutus* -- flowerhead weevil for knapweed  
WdLo *Larinus obtusus* -- flower weevil for knapweed  
WdLj *Longitarsus jacobaeae* -- flea beetle for tansy ragwort  
WdMj *Mecinus janthinus* -- boring weevil for toadflax  
WdMla *Microlarinus lareynii* -- seed-feeding weevil for puncturevine  
WdMly *Microlarinus lypriformis* -- stem-boring weevil for puncturevine  
WdOe *Oberea erythrocephala* -- stem borer for leafy spurge  
WdSe *Spurgia esulae* -- shoot-tip gall midge for leafy spurge  
WdTh *Trichosirocalus horridus* -- rosette weevil for musk thistle  
WdTl *Tytta luctuosa* -- moth for field bindweed  
WdUc *Urophora cardui* -- stem gall fly for Canada thistle  
WdUs *Urophora stylata* -- fly seed predator for bull thistle

### **Whitefly control**

WfDc *Delphastus catalinae (pusillus)* -- predatory beetle  
WfEf *Encarsia formosa* -- parasitic wasp  
WfEe *Eretmocerus eremicus* -- parasitic wasp  
WfEm *Eretmocerus mundus* -- parasitic wasp

### **Ag Bio Chem Inc.**

10795 Bryne Avenue  
Los Molinos, CA 96055  
(530) 586-1561  
[www.agbiochem.com](http://www.agbiochem.com)  
organisms: CGB

### **Applied Bionomics**

Victoria, B.C., Canada  
(250) 656-2123  
[www.appliedbionomics.com/products.html](http://www.appliedbionomics.com/products.html)  
organisms: ApAm, ApAp, FAc, FHm, MiAf, MiPp, MiSp, TAc, WfEf, WfDc

### **ARBICO, Inc.**

PO Box 8910  
Tucson AZ 85738  
(800) 827-2847  
[www.arbico.com](http://www.arbico.com)

organisms: ApAb, ApAc, Ap Ae, ApAp, BeBp, BeHb, BePf, FBt, FDi, FDs, FHm, FSf, GPL, GPLB, GPMPB, GPPM, GPSc, GPSSB, LBb, LCp, LTm, LTpl, MbCm, MiAf, MiFa, MiGo, MiMi, MiNc, MiPp, ONI, PBi, ScAp, ScRl, SnRd, Tac, WfDc, WfEe, WfEf,

### **Arnold Brothers**

PO Box 450  
Fairacres, NM 88033  
(575) 526-6165  
organisms: FP, GPL, GPLB, LT

### **Associates Insectary**

P.O. Box 969  
Santa Paula CA 93060  
(805) 933-1301  
[www.associatesinsectary.com](http://www.associatesinsectary.com)  
organisms: MbAp, MbCm, MiNc, ScAp, SnRd

### **Becker Underwood**

801 Dayton Avenue  
Ames, IA 50010  
(800) 232-5907  
[www.beckerunderwood.com](http://www.beckerunderwood.com)  
organisms: BeHb, BeHm, BeSk, FSf, GPSc, LSr, OSs

### **Beneficial Insect Company**

PO Box 471143  
Charlotte, NC 28247-1143  
(704) 607 - 1631  
[www.thebeneficialinsectco.com](http://www.thebeneficialinsectco.com)  
organisms: BeBp, BeHb, FBt, FP, GPL, GPLB, GPPM, GPSc, MiPp, MiMi, MiNc,

### **Beneficial Insectary, Inc.**

9664 Tanqueray Ct.  
Redding, CA 96003  
(800) 477-3715  
[www.insectary.com](http://www.insectary.com)  
organisms: FP, GPL, LTb, LTpl, LTp

## **RETAIL AND WHOLESALE SUPPLIERS**

### **A-1 Unique Insect Control**

5504 Sperry Drive  
Citrus Heights CA 95621  
(916) 961-7945  
[www.a-1unique.com](http://www.a-1unique.com)  
organisms: BeHb, FMr, FSe, GPLB, GPL, GPPM, GPSc, LTm, LTpr
