

Unnamed subtropical storm added to 2013 season count

As part of its routine post-season review, the National Hurricane Center (NHC) occasionally identifies from new data or meteorological interpretation a previously undesignated tropical or subtropical cyclone. The NHC re-analysis of 2013 has concluded that a short-lived low that developed south of the Azores during early December was a subtropical storm.

The Tropical Cyclone Report regarding this unnamed subtropical storm is linked at:
http://www.nhc.noaa.gov/data/tcr/AL152013_Unnamed.pdf

With this addition, the 2013 Atlantic season ended with 14 tropical and subtropical storms. Two, Ingrid and Humberto, became hurricanes, but neither became a major hurricane.
