INSIDE

Hurricane Charley

- System became a Tropical Depression on August 9th near the Windward Islands
- Became Tropical Storm Charley 18 h later over the eastern Caribbean Sea
- Steadily strengthen while moving across the Caribbean, reaching hurricane status on August 11th
- Landfall near Playa del Cajio, Cuba as a 120-mph Category 3 hurricane
- Eye crossed Cuba in about 90 minutes
- High-end category 2 hurricane when it moved into the Florida Straits

...THIRD TROPICAL DEPRESSION OF THE SEASON FORMS NEAR THE WINDWARD ISLANDS...

Hurricane Charley

Compact but well organized

**August 11 - Near the time Charley
Became a Hurricane**

**August 12 – Charley becomes better
organized while approaching Cuba**

Hurricane Charley

- **Rapidly strengthened in the hours before landfall**
 - 110-mph Category 2 to a 150-mph Category 4 hurricane in 5 hours
- **Landfall as a category 4 hurricane near Cayo Costa, Florida, on August 13, 2004**
 - Maximum winds 150 mph
 - Minimum pressure 941 mb
- **Landfall occurred about 50 h after Charley became a hurricane**
- **Strongest hurricane to hit the U.S. since Andrew (1992)**

BULLETIN

HURRICANE CHARLEY ADVISORY NUMBER 19

NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL

5 PM EDT FRI AUG 13 2004

...CHARLEY MAKES LANDFALL AS A CATEGORY FOUR HURRICANE NEAR CHARLOTTE HARBOR FLORIDA...

Hurricane Charley

- **Wind:**

- Most instruments failed
- Observing site at Punta Gorda, measured 90 mph (78 kt) sustained winds and a gust to 112 mph (97 kt)
- Well inland, the observing site at Orlando Int'l Airport measured a sustained wind of 79 mph (69 kt) with a gust to 105 mph (91 kt)

- **Storm Surge:**

- 6 to 7 ft on Sanibel and Estero Islands
- 4.2 ft measured by a tide gauge in Estero Bay (near Fort Myers Beach)
- Storm surge of 3.4 to 3.6 ft was measured on tide gauges on the Caloosahatchee River, near Fort Myers

- **Rainfall:**

- 9.88 inches Bud Slough, Florida (near Myakka State Park)

*2023 Dollars

Charley (2004) vs. Ian (2022)

Similar Strength but Different Very Different Impact Footprint

Ian

- Size: TS winds ~ 150 miles (175 max)
H winds ~ 36 miles (52 max)

Charley

- Size: TS winds ~ 70 miles (85 max)
H winds ~ 17 miles (23 max)

Differences in Core Size (Radius of Maximum Winds)

Charley: Radius of Maximum Winds ~ 6 n mi

Differences in Core Size (Radius of Maximum Winds)

Charley: Radius of Maximum Winds ~ 80mmi

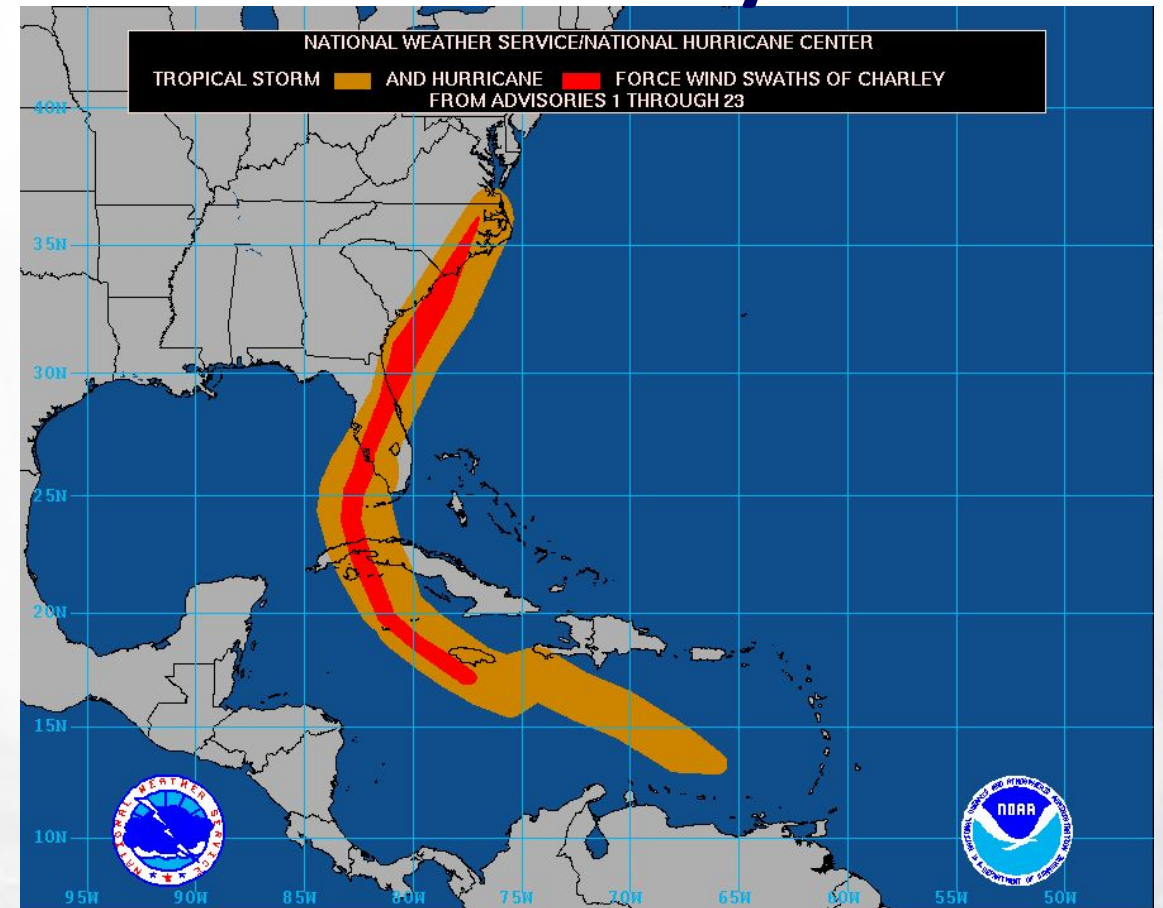

Charley – Narrow Swath of Extreme Winds but More Inland Penetration

Ian

Ian's slower forward speed allowed the storm to weaken faster so less inland wind penetration occurred

Charley

Charley's fast forward speed resulted in hurricane-force winds crossing the entire Florida Peninsula. Extreme wind damage occurred in Arcadia and Orlando

Improved Building Codes Implemented in the 1990s Likely Reduced Wind Damage

Wind Damage during Charley (2004) from two homes in Punta Gorda

Home built in 1961 (pre-Florida building codes)

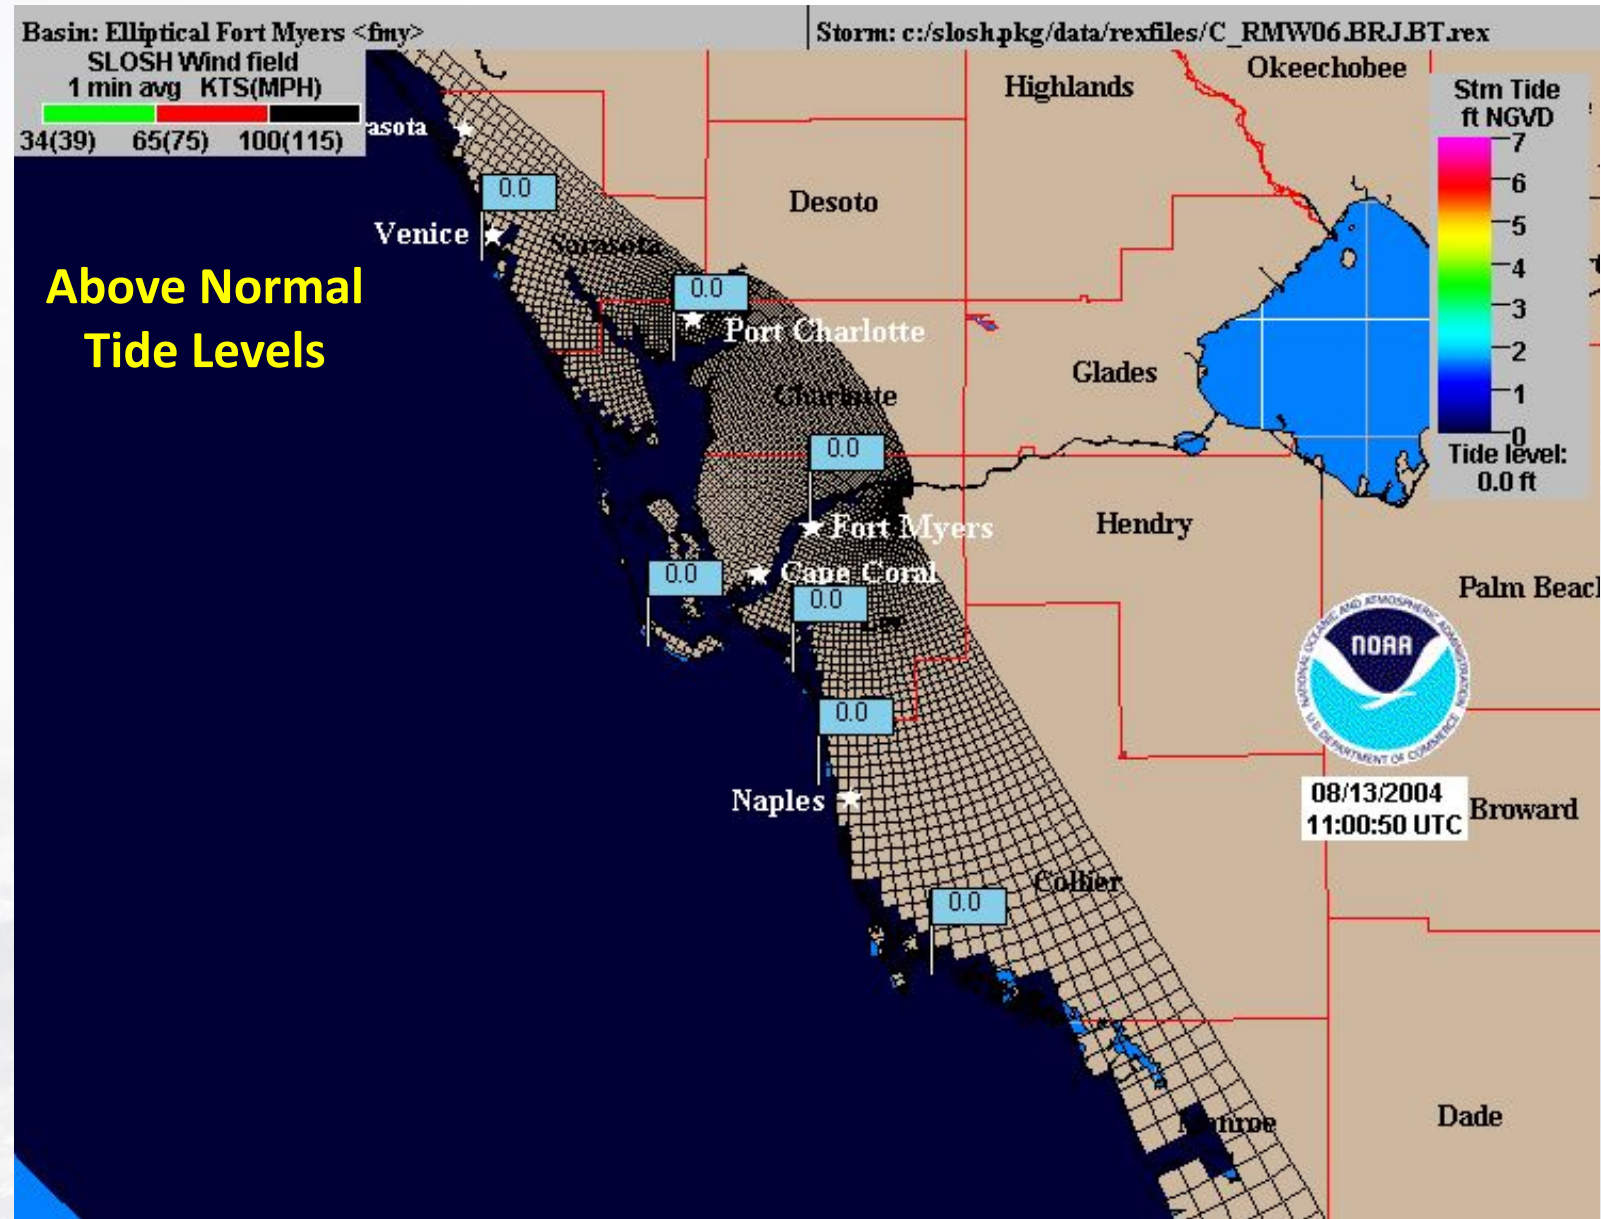

Model home (2004) in Punta Gorda Isles

Lessons learned from Charley likely mitigated wind damage from Ian (2022)

Charley's Small Core Limited its Storm Surge Footprint

- Peak storm surge of 6 to 7 ft on Sanibel and Estero Islands
- 4.2 ft measured by a tide gauge in Estero Bay (near Fort Myers Beach)
- Storm surge of 3.4 to 3.6 ft was measured on tide gauges on the Caloosahatchee River, near Fort Myers

Charley's Storm Surge Caused Breach in North Captiva

North Captiva Island, FL
September 29, 1999

August 15, 2004

U.S. Geological Survey Photo

Fast Motion of Charley Limited Rainfall Potential in Florida

- Charley's forward speed of about 20 mph kept rainfall totals relatively low across the Florida Peninsula
 - Center only took less than 7 hours to cross the peninsula
- Swath of the 3–6 inches fell from from southwest Florida across Orlando to near Daytona Beach
- Maximum 9.68 inches at Bud Slough

Charley Produced 9 Tornadoes in Florida

- Tornadoes mostly occurred in central Florida closer to the path of Charley due to the storm's small size
- Strongest in south Daytona Beach that produce a quarter-mile track of F-1 damage

Red dots were preliminary tornado reports

TWOAT
TROPICAL WEATHER OUTLOOK
NWS/TPC NATIONAL HURRICANE CENTER MIAMI FL
530 AM EDT MON AUG 9 2004

FOR THE NORTH ATLANTIC...CARIBBEAN SEA AND THE GULF OF MEXICO...

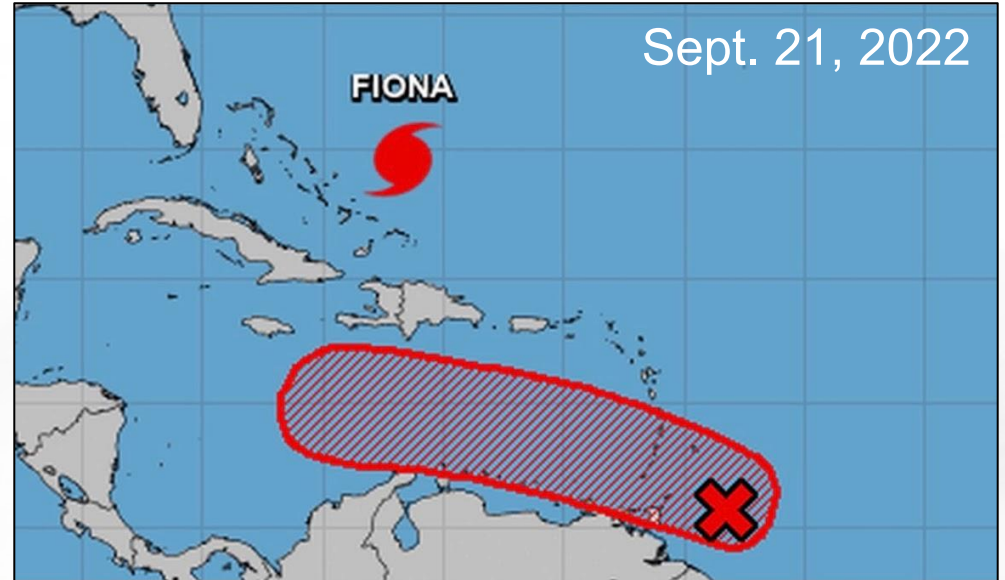

THE REMNANTS OF TROPICAL DEPRESSION TWO ARE CENTERED IN THE EXTREME SOUTHEASTERN GULF OF MEXICO ABOUT 75 MILES NORTH OF CANCUN. THIS SYSTEM CONTINUES TO SHOW SIGNS OF ORGANIZATION AND COULD RE-DEVELOP INTO A TROPICAL CYCLONE LATER TODAY. AN AIR FORCE RESERVE RECONNAISSANCE AIRCRAFT IS SCHEDULED TO INVESTIGATE THE SYSTEM THIS AFTERNOON.

A TROPICAL WAVE IS CENTERED ABOUT 150 MILES EAST OF THE WINDWARD ISLANDS. THIS SYSTEM IS MOVING WEST-NORTHWESTWARD AT ABOUT 25 MPH...AND THERE ARE NO SIGNS OF TROPICAL CYCLONE FORMATION AT THIS TIME. HOWEVER... THUNDERSTORMS ASSOCIATED WITH THIS SYSTEM ARE BEGINNING TO SPREAD ACROSS PORTIONS OF THE LESSER ANTILLES.

ELSEWHERE...TROPICAL STORM FORMATION IS NOT EXPECTED THROUGH TUESDAY.

FORECASTER FRANKLIN

In 2004, the Outlook was a text product only covering 1 to 2 days. Less than 12 h before the system that became Charley, development was not expected

Tropical system heading toward Caribbean is likely to become hurricane, with Florida in its long-term path

In 2022, the system that became Ian was introduced into the Outlook 3 ½ days before formation. Media outlets discussed the possibility of Florida impacts a week before.

Atlantic Track Error Trends

NHC Official Track Error Trend
Atlantic Basin

Average track errors have been cut in half since 2004.

This results in about an additional day to a day in a half of predictability.

Evolution of the NHC Forecast Cone

- Cone size decreased dramatically from its inception until the early 2010s.
- Much smaller reduction during the past decade.

Charley Track Guidance

About 12 hour before landfall, guidance was still showing a track toward the west-central coast of Florida.

PUNTA GORDA — With a Searson's hotel, Hurricane Charley slammed ashore at the mouth of Charlotte Harbor on Friday and cut a swath of destruction through Southwest and Central Florida, demolishing buildings, snapping palm trees and tossing airplanes around like toys.

The Category 4 storm pounded Lee and Charlotte counties with winds of more than 145 mph. Then it pummed inland, wreaking still more havoc.

"It was flat rocking and rolling," said R.W. "Bill" Caldwell III, a former Gulfport resident who rode out the storm on the Lee County Island community of Boca Grande. "It was absolutely ferocious."

Hardest hit was idyllic Captiva. Three fatalities were reported, but emergency officials were still trying to assess whether more people were killed or injured. Few were traffic accidents. The third was an unidentified Fort Myers 20-year-old who stepped outside to smoke a cigarette. A bus was thrown off on him, Lee County officials said.

Gov. Jeb Bush estimated the property damage would exceed \$15-billion, but the state's chief financial officer, Tom Gallagher, urged caution.

"Anyone who gives you a number is making it up," Gallagher said.

About two hours after Charley's 3:45 p.m. landfall near Captiva, President Bush declared a state of emergency.

Tampa Bay relieved as storm brushes by

By JAMIE THOMPSON
Times Staff Writer

By nightfall, Tampa Bay had one concern: Going home.

Beyond for a punch, Pinellas and Hillsborough counties received only a glancing blow from the powerful Category 4 storm that pummeled Charlotte Harbor with 145 mph winds.

County officials lifted evacuation orders in Pinellas, Hillsborough, Pasco, Hernando, Citrus and Manatee counties on Friday evening.

Power wasn't lost, little if any damage was reported and streets didn't flood.

"We were very, very lucky," said Charlie Paxton, meteorologist with the National Weather Service.

St. Petersburg and Tampa received less than an inch of rain, and winds topped out at about 30 mph, Paxton said.

Please see **BRACED 11A**.

Everyone where you turn, devastation

BY CHRISTY MCKENRY
Times Staff Writer

PORT CHARLOTTE — For 45 minutes, Bill and Mary Turse, 60, huddled in one small bedroom of their home, wondering whether they would live or die.

"Metal crashed on metal. Glasses broke. Bookshelves toppled."

The house groaned and creaked as the malevolent eye of Hurricane Charley passed within miles of their home, devastating much of the town.

"I just held onto him and said, please let it stop," said Mary Turse.

They emerged to total devastation. Sky where the roof used to be. Kitchen supplies flung into the bedroom. Living room furniture and all their possessions strewn around a wreckage they hardly recognized as their home.

The Turseellos and some of their neighbors had decided to ride out the storm at home, listening to the television and the radio.

"I just wanted to be close to my house, to my stuff," said Robert Angel of Tarpon Springs, who sought safety in a Lakeland motel. "I spent hundreds of dollars to be in the center of a hurricane. Our house is safe, but now I'm in a motel."

Officials were hoping that residents would not see their effort to flee as wasted, saying Tampa Bay could have just as

Storm surge packs a powerful punch

In addition to high winds and powerful rain, Hurricane Charley hit the Port Charlotte area with storm surge flooding of 10-15 feet. The surge is going to be the main killer," said Max Mayfield, director of the National Hurricane Center in Miami.

Map area: **FLORIDA**

Damage estimates put at \$15 billion; at least 3 die in storm

BY KEN KAYE AND LINDA KLEINHEINT
Times Staff Writers

Hurricane Charley gut-punched Gulf Coast towns with 145-mph winds and a devastating storm surge, then chewed up the homes and businesses of thousands of people as it sliced its way through the archipelago and amusement park playgrounds of Orlando on Friday night heading for Daytona Beach and more nourishment in the Atlantic Ocean.

"This is the nightmare scenario that we've been talking about for years," said Max Mayfield, director of the National Hurricane Center in Miami-Dade County.

The first estimates of damage came in at a staggering \$15 billion. At least three people died.

By 11 p.m. Friday, Charley had charged through Orlando with 100-mph gusts and a deluge of rain and was 10 miles southwest of Daytona Beach, hurtling forward at 25 mph. Hurricane warnings were posted all the way up to the North Carolina coast.

It was the state's most catastrophic hurricane since Andrew left \$40 billion in damage (adjusted to 2004 dollars), mostly in south Miami.

NHC Forecast

Sep 9 - 5 am (Adv 28)

Sep 13 - 5 am (Adv 44)

Track Forecasting Progress

NHC track errors are 40-50% lower now than they were then!

Hurricane Ivan at the Alabama Landfall

*Official Landfall – Pine Island Beach, Alabama
Category 3 – 120 mph winds
0650 UTC 16 September*

U.S. Impacts

- - *Ivan The Terrible*
- 25 direct fatalities – 14 in FL, 8 in NC, 2 in GA, and 1 in MS
- 32 indirect fatalities
- ~32 billion dollars of damage due to the combination of storm surge, inland flooding, wind damage and tornadoes

Storm Surge

- Storm surge was generally in the 10-15 ft range from Destin, FL to Mobile Bay, AL
- Extensive coastal damage, portions of Interstate 10 was damaged, bridge collapse
- Perdido Key, FL was essentially leveled.

Rainfall

- Locally rainfall amount of 15-17 inches occurred near the landfall spot.
- Large swath of rain greater than 5 inches occurred along the track from the deep south to New England.
- Widespread flooding occurred due to saturated grounds from other hurricanes just a few weeks prior

Ivan's Inland Flooding in WV & OH

Photo Credit: Jake Mecklenborg; WFO Pittsburgh; WRTF; Michael Stahl

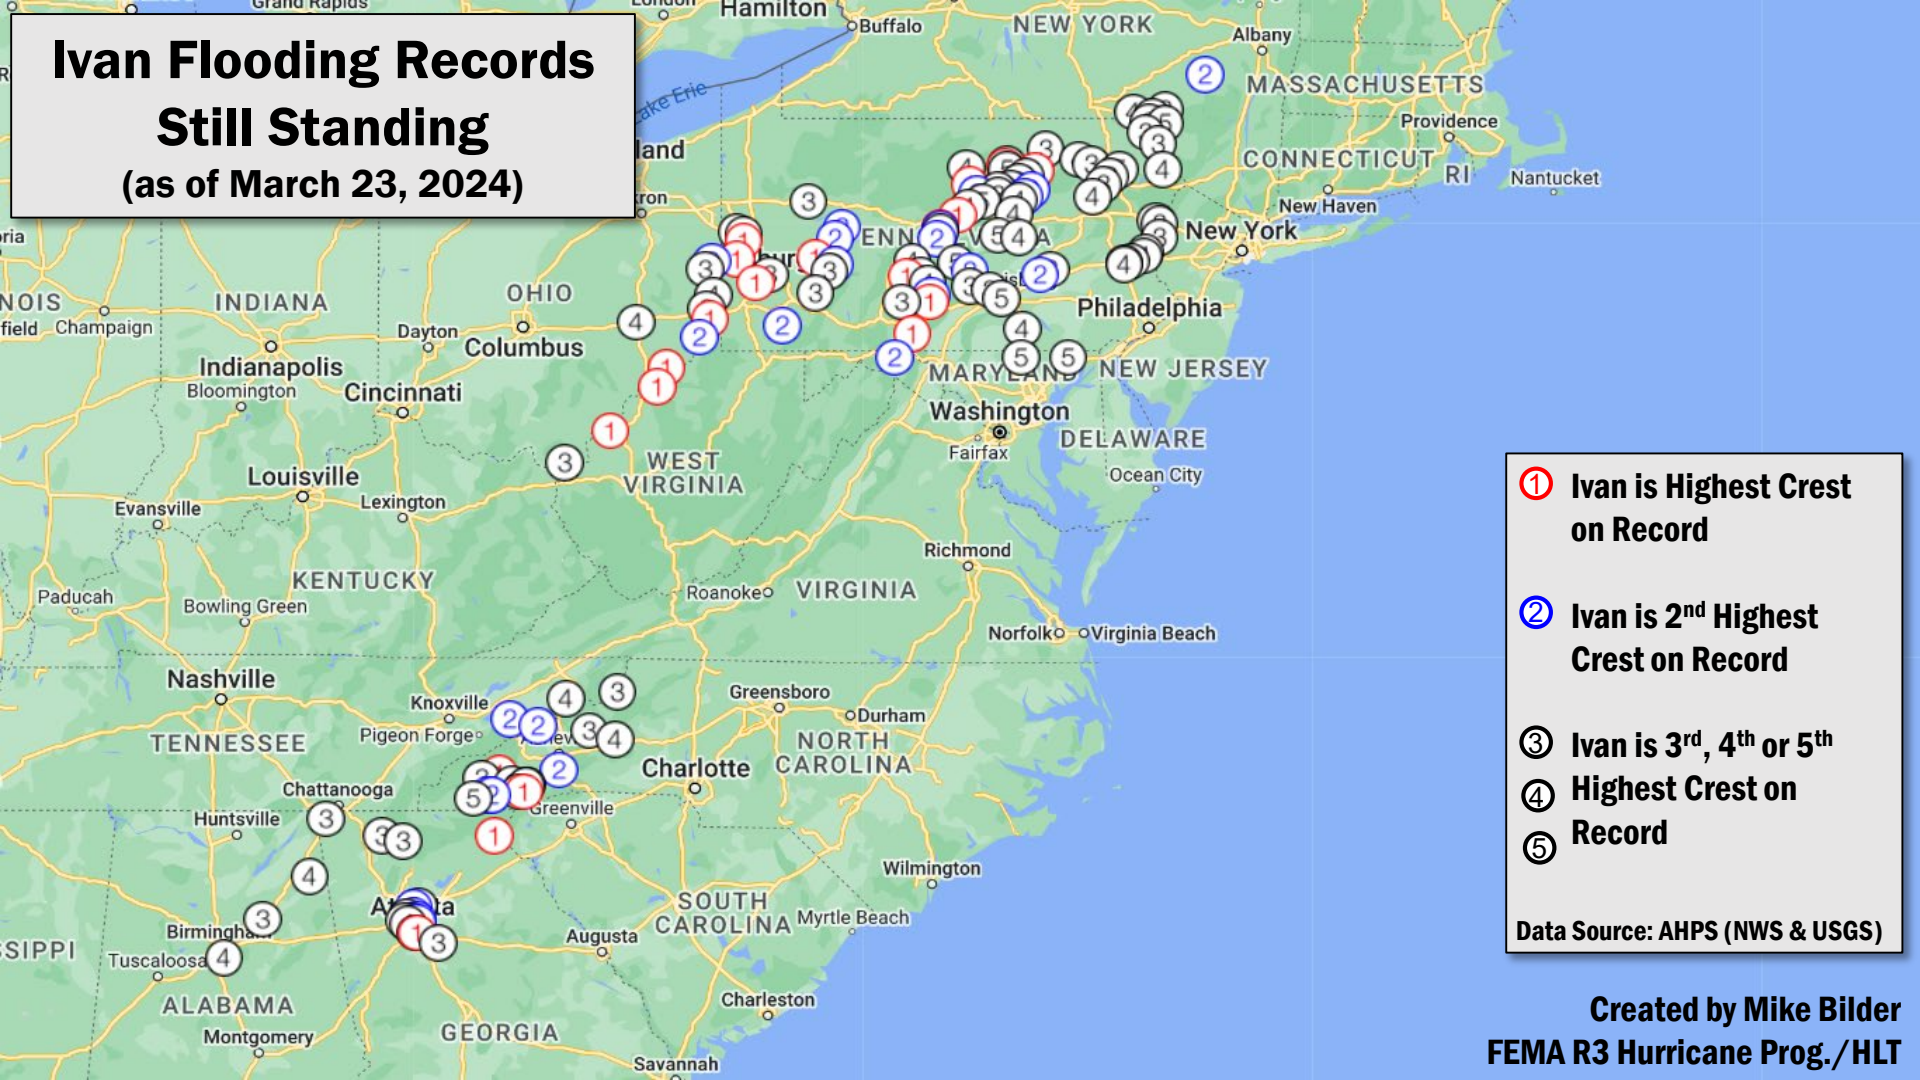

Debris Flow in Macon Co., NC

The southern mountains of NC, incl. Macon County, received the highest rainfall totals during both Frances and Ivan. The massive debris flow from the peak of Fishhawk Mountain hit Peaks Creek community in the middle of the night, destroying about 15 homes in a matter of seconds, killing four people and seriously injuring several more.

Ivan Flooding Records Still Standing (as of March 23, 2024)

AHPS (NWS & USGS)**

Flooding Testimonials from PA, WV & OH

- At least 12 deaths in Pennsylvania from inland flooding, including a man swept away by flooding after clinging to a tree for 45 minutes. One person suffered a heart attack and another adult and a 2-year-old girl drowned.
- In Marietta, OH, streets were underwater near the river and about 200 people had to leave their homes in what could be the city's worst flooding since 1959.
- The 126-year-old Rinard Covered Bridge over the Little Muskingum River near Bloomfield, OH “literally disappeared.”
- All around West Virginia, flooding and mudslides had blocked more than 200 roads and damaged hundreds of houses, authorities said.
- About 1,700 people were out of their homes in eastern Ohio.
