# COMMENTARY

---

The Ryan White HIV/AIDS Program (RWHAP) provides a comprehensive system of direct HIV health care, essential support services, and medications for more than half a million people with HIV in the United States. The RWHAP has five statutorily defined Parts that provide funding for core medical and support services, technical assistance, clinical training, and the development of innovative models of care to meet the needs of communities and populations affected by HIV. The RWHAP legislation authorizes that a portion of RWHAP Part B funds to provide grant funding to all 50 U.S. states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and six U.S. Pacific territories be designated for the AIDS Drug Assistance Program (ADAP), which provides U.S. Food and Drug Administration (FDA)–approved medications to low-income people with HIV.

RWHAP ADAP, hereafter referred to as ADAP, funds may be used to provide HIV and HIV-related prescription drugs and access to medications through the purchase of health care coverage for eligible clients and, in some circumstances, for services that enhance access to, adherence to, and monitoring of drug treatments. ADAP is critical to ensuring that people with HIV are able to afford and adhere to medication regimens and remain virally suppressed. People with HIV who reach and maintain an undetectable viral load can live a close-to-normal lifespan and have effectively no risk of sexually transmitting the virus to an HIV-negative partner. The medication and health care coverage assistance offered by ADAP is crucial for attaining optimal HIV health outcomes among people with HIV, for preventing further transmission of the virus, and, ultimately, for ending the HIV epidemic.

## **HISTORY OF HRSA’S RWHAP AIDS DRUG ASSISTANCE PROGRAM**

The RWHAP is administered by the U.S. Department of Health and Human Services (HHS), Health Resources and Services Administration (HRSA), HIV/AIDS Bureau (HAB). The RWHAP legislation was first enacted in 1990 when Congress passed the Ryan White Comprehensive AIDS Resources Emergency (CARE) Act to address the crisis of the HIV epidemic in the United States. This legislation has been amended and reauthorized four times: in 1996, 2000, 2006, and, most recently, in 2009 as the Ryan White HIV/AIDS Treatment Extension Act of 2009.

In 1987, the FDA approved the drug azidothymidine (AZT, zidovudine, Retrovir) to treat HIV in the United States [1]. At that time, the cost of this drug was about \$10,000 per year, per person—preventing access for most people with HIV [2]. In 1991, HRSA launched the AZT Drug Reimbursement Program with \$30 million approved by Congress under a public health emergency provision, allowing low-income people with HIV access to HIV treatment [2]. HRSA’s AZT Drug Reimbursement Program laid the foundation for ADAP, which was authorized under the CARE Act in 1996 as a separate line item under Title II (Part B) and classified as a core medical service.

Each state or territory operates an ADAP, and each is unique due to the state’s or territory’s HIV prevalence, health care system, and administrative structures used to ensure HIV medications are available to eligible people with HIV [2]. The purpose of ADAP, as stated in the RWHAP legislation, is “to provide therapeutics to treat HIV or prevent the serious deterioration of health arising from HIV in eligible individuals, including measures for the prevention and treatment of opportunistic infections” [3]. To be eligible to receive ADAP services, a client must have a documented diagnosis of HIV, have low income (as defined by the recipient; may be determined based on percentage of the federal poverty level [FPL]), and meet the residency criteria established by the ADAP [4].

Since Congress first appropriated funds for ADAP in 1996, ADAPs have expanded considerably, as has the availability of antiretroviral therapy (ART). Between 1996 and its reauthorization in 2000, ADAP funding increased from \$52 million to \$528 million. In addition, for the first time in 2000, ADAPs were permitted to pay health care coverage costs to support coverage of HIV-related medications [2,5]. In 2006, Congress appropriated additional funding in a continued effort to reach underserved populations. During the 2009 reauthorization of ADAP, funding levels reached approximately \$900 million in fiscal year 2011 [1–3,5] and have remained largely consistent.

The significant increases in ADAP funding since the program was first appropriated underscore the important need for ADAP services for people with HIV. The important role of ADAPs is evidenced by the following:

- Increased and improved HIV testing, resulting in more people knowing their HIV status
- Increased number of people on ART after the U.S. Public Health Service’s guidelines indicated the need for early treatment of people with HIV
- More people with HIV living longer
- More intensive use of HIV drugs for long-term HIV survivors
- Increased cost-sharing associated with health care coverage
- Increased cost of medications and health care coverage
- Increased number of people who are virally suppressed, which reduces transmission

As is true for the entire RWHAP, ADAPs serve as the payor of last resort. ADAP grant recipients and subrecipients are expected to enroll clients into health care coverage for which the client may be eligible (i.e., Medicare, Medicaid, or other public and private plans). ADAPs coordinate with other payors and programs to ensure clients have access to HIV medications [2,5].

## **ABOUT THE ADAP CLIENT-LEVEL DATA REPORT**

This report is HRSA HAB’s annual publication of national ADAP client-level data from the ADAP Data Report (ADR) reporting system. It includes client-level data for all clients enrolled in ADAP during calendar years 2016 through 2020, as submitted to HRSA by ADAPs from each of the 50 U.S. states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands. A national partner organization, NASTAD, also publishes an annual report called the *National RWHAP Part B and ADAP Monitoring Project Report* [5], which is based on aggregate-level data it collects directly from RWHAP Part B and ADAPs. The NASTAD report conceptualizes the ADAP structure, budget, and service utilization within the broader RWHAP Part B system.

Data submitted through the ADR include client demographics, socioeconomic factors (e.g., income as a percentage of the FPL, health care coverage), and service utilization among clients enrolled in ADAP. These data can be used to evaluate the reach and impact of ADAP on a national level.

The ADR data do not include information about clients receiving non-ADAP RWHAP services, such as core medical and support services; however, many ADAP clients also receive these services. Together, ADAP services and RWHAP direct care and support services create a comprehensive system of care and treatment for people with HIV. Data for clients receiving non-ADAP RWHAP services are reported to HRSA through the RWHAP Services Report (RSR) and are published annually in the *RWHAP Annual Client-Level Data Report* [6] and the RWHAP Compass Dashboard (see the Additional Resources section).

## REPORT CHANGES

The coronavirus 2019 (COVID-19) pandemic emerged during the 2019 ADAP data submission period and continued through the 2020 collection and submission periods. HRSA HAB acknowledges the incredible efforts ADAP recipients made to report data promptly throughout this time. COVID-19 pandemic–related challenges and associated economic factors may have resulted in some states' having significant increases in the number of clients enrolled in ADAP (i.e., increased numbers of people with HIV with lower incomes due to COVID-19-related unemployment).

Data for the state of Pennsylvania regarding gender, FPL, and services received are not included in this report because of data quality issues (Tables 1–4, 6–7, and 11–13). However, Pennsylvania's data by age group, race/ethnicity, and health care coverage are included.

## HIGHLIGHTS OF ANALYSES

As mentioned previously, each state or territory operates an ADAP, and each is unique based on the state's or territory's HIV prevalence, health care system, and administrative structures used to ensure HIV medications are available to eligible people with HIV [2]. Because of these contextual differences, please use care when interpreting these data.

### RWHAP AIDS Drug Assistance Program Clients

**ADAPs served more than 300,000 people with HIV in 2020.** From 2016 through 2020, the total number of people with HIV enrolled in ADAP increased by nearly 35,000 clients, from 266,147 clients in 2016 to 300,785 clients in 2020 (Table 1). By state, the data have shown variability since 2016 (Table 8); these shifts may be attributed to a variety of reasons, including changes to data collection, each state's health care landscape, eligibility requirements, or other factors.

**The majority of ADAP clients are male.** In 2020, 78.1% of clients were cisgender male (i.e., non-transgender male; hereafter referred to as *male*), 20.4% were cisgender female (hereafter referred to as *female*), and 1.6% identified as transgender (1.3% transgender female [i.e., assigned male sex at birth]; 0.1% transgender male [i.e., assigned female sex at birth]; 0.1% clients with another gender identity; Table 1).<sup>1</sup> The gender distribution of ADAP clients has remained largely consistent since 2016. Please see the Technical Notes for additional information about gender categories.

**Seven out of 10 ADAP clients are from racial/ethnic minority populations.** In 2020, 39.5% of clients self-identified as Black/African American, 27.6% as Hispanic/Latino, and less than 2% each as Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, and people of multiple races. White clients represented 29.6% of all ADAP clients. These race/ethnicity distributions have remained consistent since 2016 (Table 1).

**ADAP clients from racial/ethnic minority populations are younger than White clients.** In 2020, 60.5% of White ADAP clients were aged 50 years or older, compared with 48.0% of American Indian/Alaska Native clients, 40.3% of Native Hawaiian/Pacific Islander clients, 39.6% of Black/African American clients, 38.8% of clients of multiple races, 37.8% of Hispanic/Latino clients, and 34.4% of Asian clients (Table 2).

**More than half of female ADAP clients are Black/African American.** In 2020, among female ADAP clients with a reported race/ethnicity, 56.5% were Black/African American, 23.2% were Hispanic/Latina, 17.5% were White, and less than 2% each were Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, or multiple races (Table 3). In comparison, 34.7% of male clients were Black/African American, 32.8% were White, and 29.1% were Hispanic/Latino.

<sup>1</sup> Due to rounding, percentages may not sum to 100.0%.

## Socioeconomic Factors Among ADAP Clients

**More than one-third of all ADAP clients have no health care coverage.** In 2020, 37.4% of ADAP clients had no health care coverage (Table 1). Although this percentage has remained largely consistent since 2016, it varies by race/ethnicity. Whereas 20.7% of White clients had no health care coverage, 48.2% of Hispanic/Latino clients and 42.8% of Black/African American clients had no health care coverage in 2020 (Table 2). This percentage also varies by gender. Among male clients, the percentage with no health care coverage was 37.8% compared to 36.2% among female clients. Lack of coverage was higher among transgender clients: 34.9% among transgender male clients, 52.6% among transgender female clients, and 59.5% among clients of other gender identities (Table 3).

**Higher percentages of ADAP clients from racial/ethnic minority populations are living at or below 100% FPL compared with White ADAP clients.** In 2020, among race/ethnicity groups, Hispanic/Latino clients had the highest percentage at or below 100% FPL (55.7%), followed by Black/African American clients (53.8%), American Indian/Alaska Native clients (50.0%), clients of multiple races (40.6%), Asian clients (39.5%), Native Hawaiian/Pacific Islander clients (37.6%), and White clients (37.4%) (Table 2).

**Higher percentages of ADAP clients who are female, transgender female, and another gender identity are living at or below 100% FPL compared with male and transgender male ADAP clients.** In 2020, 56.5% of female ADAP clients, 68.1% of transgender female clients, and 65.7% of clients of other gender identities were living at or below 100% FPL. These percentages are compared with 46.8% among male clients and 48.4% among transgender male clients (Table 3).

## Service Utilization

**The percentages of clients receiving full-pay medication support only or medication cost-sharing assistance have remained relatively consistent, whereas an increased percentage of clients are receiving health care coverage premium assistance or a combination of services.** Among ADAP clients for whom service utilization information in 2020 is available, 47.5% received full-pay medication support only, a slight decrease from 48.9% in 2016. The percentage of clients receiving multiple services increased slightly, from 25.6% in 2016 to 27.8% in 2020; however, the 2020 percentage is slightly lower than that in 2018 (28.6%) and 2019 (30.3%) (Table 1). These differences may be attributed to changes in the health care landscape during this time frame.

**The percentage of clients receiving full-pay medication support is higher among clients younger than age 50, and the percentage receiving medication co-pay/deductible assistance is higher among clients aged 50 years and older.** In 2020, 68.5% of clients accessing full-pay medication support were younger than age 50. In comparison, among clients accessing medication co-pay/deductible assistance, 69.9% were aged 50 years and older. The distributions of clients receiving insurance premium assistance or receiving multiple services were relatively even between clients older and younger than 50 years of age (Table 7).

**The distribution of services received differs by HHS region.** In 2020, Region 1 had the highest percentage of ADAP clients using medication co-pay/deductible services (42.2%) when compared to other regions. Meanwhile, Region 6 had the highest percentage of ADAP clients receiving full-pay medication support (69.7%), followed by Region 4 (60.1%). Regions 7 and 8 had the highest percentages of ADAP clients receiving multiple services (49.6% and 46.3%, respectively) (Table 7). See the Technical Notes for the list of states in each HHS region.

# TECHNICAL NOTES

---

The ADR is the HRSA HAB's primary source of annual client-level data to evaluate the reach of the ADAP on a national level. The ADR allows HRSA HAB to describe individuals enrolled in the program and the ADAP-funded services being used, as well as to delineate costs associated with these services [7].

The ADR was developed and implemented in 2013. RWHAP Part B ADAP recipients in the 50 U.S. states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands are required to submit ADR data as a condition of the Part B grant award (the remaining five U.S. Pacific territories do not have this requirement). The ADR consists of two components: (1) the Recipient Report and (2) the Client Report. The Recipient Report is a collection of information about ADAP administration, funding, and policies. The Client Report (or client-level data) is a collection of de-identified records that includes each ADAP client's basic demographic data, enrollment and certification information, and client-level data for clients enrolled during the calendar year reporting period (January 1 to December 31) [7].

Although the ADR may include clients who received both ADAP and non-ADAP RWHAP services during the reporting period, ADR data do not include information on non-ADAP RWHAP services (e.g., outpatient ambulatory health services), nor does the ADR collect information to identify which clients overlap with non-ADAP RWHAP services. Client-level data from non-ADAP RWHAP services are reported through another data system and are published annually in the *RWHAP Annual Client-Level Data Report* [6].

## PRESENTATION OF DATA

The data in this report include information received by HRSA HAB for all ADAP clients during calendar years 2016–2020. The purpose of the client demographics is to describe the sociodemographic characteristics of all clients **enrolled** in ADAP, **regardless of whether they received services** (i.e., a client can be enrolled in ADAP but not use the service) [7].

- Tables 1–7: National-level data—Numbers and percentages of ADAP clients, presented by year, selected demographic stratifications, HHS region, and ADAP (i.e., non-RSR) service received.
- Tables 8–13: State-level data—Numbers and percentages of ADAP clients by state or territory, presented by selected demographic stratifications.

Tables 1–7 display subtotals and the overall totals for each subpopulation. The subtotals are displayed to reflect the denominator used for the percentage calculation of each subpopulation. In some cases, percentages may not sum to 100.0% because of rounding. Because of missing data, the values in each column may not sum to the column total.

## ADAP Clients

To be eligible for enrollment in ADAP services, a client must have a documented diagnosis of HIV, have low income, and meet the residency criteria established by the ADAP [4]. An ADAP client is any person who is certified as eligible to receive ADAP services during the reporting period, regardless of whether the person used ADAP services during the reporting period. In the event of a funding shortage, clients may be placed on a waiting list; however, in 2020, there were no ADAP waiting lists [7].

## Age Group

Recipients are required to report the ADAP client's year of birth. This information is used to calculate the client's age during the designated year as a discrete variable. For tables displaying age groups (Tables 1–7), client ages were categorized to align with the Centers for Disease Control and Prevention's National HIV Surveillance System age group delineations. The age group delineations are as follow: <13, 13–14, 15–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64, and ≥65 years. In Table 9, client ages were categorized using broader age group delineations: <13, 13–24, 25–34, 35–44, 45–54, 55–64, and ≥65 years.

## Race/Ethnicity

Recipients reported race/ethnicity information for ADAP clients according to the Office of Management and Budget (OMB) reporting standards. The OMB standards have five categories for race: American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White. Data on ethnicity have two categories: (1) Hispanic or Latino and (2) not Hispanic or Latino. Race and ethnicity are submitted as separate variables and combined for analysis. In the analysis, the race/ethnicity variable is categorized as American Indian or Alaska Native, Asian, Black or African American, Hispanic or Latino, Native Hawaiian or other Pacific Islander, White, and multiple races (two or more categories of race reported).

In this report, clients categorized as Hispanic/Latino may have had any race also reported. Clients categorized by race (e.g., Black/African American) are non-Hispanic/Latino; however, the number of clients reported in each “non-Hispanic/Latino” race category may include clients with missing data for Hispanic/Latino ethnicity.

ADAP recipients are expected to make every effort to obtain and report race and ethnicity based on each client's self-report. Self-identification is the preferred means of obtaining this information.

## Gender

Gender designations in this report are cisgender (non-transgender) male, cisgender female, or transgender. Transgender is an umbrella term for people whose gender identity and/or expression is different from their sex assigned at birth. Because of the unique health needs of transgender people with HIV, they are discussed separately from cisgender people and are specifically identified as being transgender. HRSA HAB collaborated with the transgender community and other experts in sexual orientation and gender identity data collection methods to successfully designate transgender people receiving HIV care and treatment from RWHAP providers to best inform program decisions.

### ***Reporting and analysis to determine transgender identity***

Transgender variable options for ADR data reporting include transgender female-to-male (FTM), transgender male-to-female (MTF), and transgender other, which includes people who do not identify with the provided transgender variable options and/or do not identify with the binary options of male/female (e.g., nonbinary, two-spirit, genderqueer). Self-identification is the preferred means of obtaining this information.

HRSA HAB requires ADAP recipients to report gender using a two-step method: *sex assigned at birth* (male or female) and the *current gender* (male, female, FTM, MTF, and transgender other). Gender data were analyzed using the two-step method for determining gender identity, which takes into account *sex assigned at birth* and *current gender*. When the reported *current gender* is different from the *sex assigned at birth*, the analysis determines gender using an algorithm designed specifically for this purpose.

### ***Language used in this report***

In this report, for analyses that include clients of all ages, cisgender male clients are referred to as *male*, cisgender female clients as *female*, transgender FTM clients as *transgender male*, and transgender MTF clients as *transgender female*. For analyses that include only clients aged 13 years and older, clients are referred to as *men*, *women*, *transgender men*, and *transgender women*, respectively. Clients designated under the *transgender other* variable option are referred throughout as *clients with another gender identity*, or in the data tables as *other gender identity*.

### **Federal Poverty Level**

FPL characterizes the client's annual household income as a percentage of the FPL at the end of the reporting period. The poverty levels were categorized as 0–100% FPL, 101–138% FPL, 139–250% FPL, 251–400% FPL, and >400% FPL.

### **Health Care Coverage**

Recipients are required to report all sources of health care coverage that each ADAP client had for any part of the reporting period, regardless of whether the ADAP paid for it. Health care coverage was categorized as private employer, private individual, Medicare, Medicaid, Medicare and Medicaid (dual eligibility), Veterans Administration, Indian Health Service, other plan, multiple coverages, and no coverage. The Medicaid classification also includes the Children's Health Insurance Program (CHIP) and other public state health care coverage programs. The Medicare Part D classification is a stand-alone prescription drug coverage insurance for clients on Medicare.

### **ADAP Services**

ADAP services include both full-pay medication assistance and health care coverage premium and cost-sharing assistance, which are provided to eligible clients enrolled in ADAP. All ADAP funds, regardless of their source (e.g., state funds, RWHAP Part B ADAP Base, RWHAP Part B Base, RWHAP Part B Supplemental Funding, ADAP Emergency Relief Funds, RWHAP Part A contributions, 340B rebates, ADAP Crisis Task Force Rebates), are reported in the ADR [6].

Medication assistance (i.e., full-pay medication support) is the use of ADAP funds to purchase FDA-approved medications for the treatment of HIV or for the prevention and treatment of opportunistic infections commonly associated with HIV and to support a client's retention in care.

Health care coverage assistance is the use of ADAP funds to pay for one or more of the following:

- Full premium payment
- Partial premium payment
- Medication co-pay/deductible (including Medicare Part D coinsurance, co-payment, or donut hole coverage)

A full premium payment is when the ADAP pays 100% of the client's health care coverage premium. A partial payment is when the ADAP pays a portion (i.e., <100%) of the health care coverage premium. A medication co-pay/deductible is when the ADAP pays the co-pay/deductible for the client's HIV-related medication, including Medicare Part D–related costs. Medication co-pays, deductibles, and coinsurance are considered health care coverage assistance services, not medication services [7].

## HHS Region

HHS uses 10 geographic designations for classifying regions of the United States that encompass all states and territories. The classification of states and territories within these regions is as follows:

- Region 1: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
- Region 2: New Jersey, New York, Puerto Rico, U.S. Virgin Islands
- Region 3: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia
- Region 4: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee
- Region 5: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin
- Region 6: Arkansas, Louisiana, New Mexico, Oklahoma, Texas
- Region 7: Iowa, Kansas, Missouri, Nebraska
- Region 8: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming
- Region 9: Arizona, California, Guam, Hawaii, Nevada
- Region 10: Alaska, Idaho, Oregon, Washington

The six U.S. Pacific jurisdictions are included in HHS Region 9; however, only Guam submits client-level data. The other jurisdictions, therefore, are not included in this report. Puerto Rico and the U.S. Virgin Islands are included in Region 2.

## State

State data are displayed in Tables 8–13. Clients enrolled in ADAP in multiple states are not de-duplicated and are included in each state’s data; however, these clients make up less than 1% of all ADAP clients. In addition, data presented by state include data for all clients served by state ADAPs and are not separated by the type of ADAP-specific funding used (i.e., RWHAP Part B, RWHAP Part B Supplemental, and ADAP Emergency Relief Funds).

Note: See Technical Notes for information regarding gender identity determination.

\*To ensure confidentiality, data have been suppressed.

<sup>a</sup> Row totals include clients in the specified subpopulation with reported gender information.

<sup>b</sup> Hispanics/Latinos can be of any race.

<sup>c</sup> Subtotals for each subpopulation are displayed to reflect the denominator used for the percentage calculation of each subpopulation; due to missing data, the values in each column may not sum to the column total. Due to rounding, percentages may not add to 100.0%.

Notes: Percentages shown are based on the row total. Due to rounding, percentages may not add to 100.0%.

Data are not de-duplicated across states. Clients may be counted in multiple states; however, these clients make up less than 1% of the total ADAP population.

Notes: Percentages shown are based on the row total. Due to rounding, percentages may not add to 100.0%.

Data are not de-duplicated. Clients may be counted in multiple states; however, these clients make up less than 1% of the total ADAP population.

<sup>a</sup> Includes Medicare Part D co-insurance, co-payment, or donut hole coverage.

<sup>b</sup> 2020 ADAP services data for Pennsylvania are unavailable.
