# COMMENTARY

---

The Ryan White HIV/AIDS Program (RWHAP), first enacted by U.S. Congress in 1990, provides a comprehensive system of direct HIV health care, essential support services, and medications for more than half a million people with HIV in the United States. The RWHAP has five statutorily defined Parts that provide funding for core medical and support services, technical assistance, clinical training, and the development of innovative models of care to meet the needs of different communities and populations affected by HIV. The RWHAP provides grant funding to all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and six U.S. Pacific jurisdictions to support HIV care and treatment services. The RWHAP legislation authorizes a portion of Part B funds to be designated for the AIDS Drug Assistance Program (ADAP), which provides U.S. Food and Drug Administration (FDA)–approved medications to low-income people with HIV with limited or no health care coverage.

ADAP funds may be used to provide HIV and HIV-related prescription drugs and to provide access to medications through the purchase of health care coverage for eligible clients and for services that enhance access to, adherence to, and monitoring of drug treatments. The ADAP is critical to ensuring that people with HIV are able to afford and adhere to medication regimens and remain virally suppressed. People with HIV who achieve and maintain an undetectable viral load have effectively no risk of sexually transmitting the virus to an HIV-negative partner. The medication and health care coverage assistance offered by ADAP is crucial for attaining optimal HIV health outcomes among people with HIV, for preventing further transmission of the virus, and, ultimately, for ending the HIV epidemic.

## **HISTORY OF HRSA’S RWHAP AIDS DRUG ASSISTANCE PROGRAM**

The RWHAP is administered by the U.S. Department of Health and Human Services (HHS), Health Resources and Services Administration (HRSA), HIV/AIDS Bureau (HAB). The RWHAP legislation was first enacted in 1990 when Congress passed the Ryan White Comprehensive AIDS Resources Emergency (CARE) Act to address the crisis of the HIV epidemic in the United States. This legislation has been amended and reauthorized four times: in 1996, 2000, 2006, and, most recently, in 2009 as the Ryan White HIV/AIDS Treatment Extension Act of 2009.

In 1987, the FDA approved the drug azidothymidine (AZT, zidovudine, Retrovir) to treat HIV in the United States [1]. At that time, the cost of this drug was about \$10,000 per year, per person—preventing access for most people with HIV [2]. In 1991, HRSA launched the AZT Drug Reimbursement Program with \$30 million approved by Congress under a public health emergency provision allowing low-income people with HIV access to HIV treatment [2]. HRSA’s AZT Drug Reimbursement Program laid the foundation for ADAP, authorized under the CARE Act in 1996 as a separate line item under Title II (Part B) and classified as a core medical service.

Each state or territory operates an ADAP, and each is unique due to the state or territory’s HIV prevalence, health care system, and administrative structures used to ensure HIV medications are available to eligible people with HIV [2]. The purpose of ADAP, as stated in the RWHAP legislation, is “to provide therapeutics to treat HIV or prevent the serious deterioration of health arising from HIV in eligible individuals, including measures for the prevention and treatment of opportunistic infections” [3]. To be eligible to receive assistance from a state or territory under ADAP, the client must have a medical diagnosis of HIV and meet the federal poverty level (FPL) threshold determined by the state or territory.

Since Congress first appropriated funds for ADAP in 1996, ADAPs have expanded considerably, as has the availability of antiretroviral medication. Between 1996 and its reauthorization in 2000, ADAP program funding increased from \$52 million to \$528 million. In addition, for the first time in 2000, ADAPs

were permitted to pay health care coverage costs to support coverage of HIV-related medications [2,4]. In 2006, funding rose another 50%, in a continued effort to reach underserved populations. During the 2009 reauthorization of ADAP, funding levels reached approximately \$900 million in fiscal year 2011 [1–4] and have remained largely consistent.

The significant increases in ADAP funding since the program was first appropriated underscore the important need for ADAP services for people with HIV. The important role of ADAPs is evidenced by the following:

- increased and improved HIV testing, resulting in more people knowing their HIV status
- increased number of people on ART after the U.S. Public Health Service’s guidelines indicated the need for early treatment of people with HIV
- more people living longer with HIV
- more intensive use of HIV drugs for long-term survivors
- increased cost-sharing associated with health insurance
- increased cost of medications and health care coverage
- reduced number of new HIV infections resulting from successful HIV treatment outcomes

As is true for the entire RWHAP, ADAPs serve as the payor of last resort. ADAP grant recipients and subrecipients are expected to enroll clients into health care coverage for which the client may be eligible (i.e., Medicare, Medicaid, or other public and private plans). ADAPs coordinate with other payors and programs to ensure clients have access to HIV medications [2,4].

## **ABOUT THE ADAP CLIENT-LEVEL DATA REPORT**

This report is the second annual ADAP Client-Level Data Report and includes client-level data reported to HRSA by each state and territory ADAP for all clients receiving ADAP services during calendar years 2014 through 2018. NASTAD also publishes an annual report on aggregate data it collects from RWHAP Part B and ADAP programs, the *National RWHAP Part B and ADAP Monitoring Project Annual Report* [4], which conceptualizes the ADAP program structure, budget, and service utilization within the broader RWHAP Part B system.

Data submitted through the ADAP Data Report (ADR) include client demographics, socioeconomic factors (e.g., income as a percentage of the FPL, health care coverage), and service utilization among clients enrolled in ADAP. These data can be used to evaluate the reach and impact of ADAP on a national level.

The ADR data do not include information about clients receiving non-ADAP RWHAP services, such as core medical and support services. However, many ADAP clients also receive these services. Together, ADAP services and RWHAP direct care and support services create a comprehensive system of care and treatment for people with HIV. Data for clients receiving non-ADAP RWHAP services are reported to HRSA through the RWHAP Services Report (RSR) and are published annually in the *RWHAP Annual Client-Level Data Report* [5].

## **HIGHLIGHTS OF ANALYSES**

Given the diversity of the ADAPs nationally and the complexity of the data, the data presented in this report should be interpreted with caution.

## RWHAP AIDS Drug Assistance Program Clients

**ADAPs served approximately 285,000 people with HIV in 2018.** From 2014 through 2017, the total number of people with HIV receiving ADAP services nationally was largely consistent. In 2018, however, this number increased to 285,101 clients (Table 1). By state, the data have shown variability since 2014 (Table 8); these shifts may be attributed to a variety of reasons, including changes to data collection, each state's health care landscape, eligibility requirements, or other factors.

**The majority of ADAP clients are male.** In 2018, 77.3% of clients were male, 21.4% were female, and 1.2% were transgender (Table 1). The gender distribution of ADAP clients has remained largely consistent since 2014. See Technical Notes for information about gender designation.<sup>1</sup>

**Nearly three-quarters of ADAP clients are from racial/ethnic minority populations.** In 2018, 39.1% of clients self-identified as Black/African American, 26.4% as Hispanic/Latino, and less than 2% each as Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, and people of multiple races. Nearly one-third (31.2%) of ADAP clients self-identified as White. These race/ethnicity distributions have remained consistent since 2014 (Table 1).

**ADAP clients from racial/ethnic minority populations are younger than White clients.** In 2018, 56.5% of White ADAP clients were aged 50 years or older, compared with 42.5% of American Indians/Alaska Natives, 41.1% of Native Hawaiians/Pacific Islanders, 39.3% of Blacks/African Americans, 36.5% of Hispanics/Latinos, 36.4% of clients of multiple races, and 30.6% of Asians (Table 2).

**More than half of female ADAP clients are Black/African American.** In 2018, among female ADAP clients whose race/ethnicity was reported, 55.7% were Black/African American, 22.7% were Hispanic/Latina, 18.8% were White, and less than 2% each were Asian, American Indian/Alaska Native, Native Hawaiian/Pacific Islander, or multiple races (Table 3). In comparison, 34.4% of male clients were Black/African American, 34.9% were White, and 27.2% were Hispanic/Latino.

### Socioeconomic Factors Among ADAP Clients

**More than one-third of all ADAP clients have no health care coverage.** In 2018, 38.4% of ADAP clients had no health care coverage, a decrease from 44.4% in 2014. (Table 1). This percentage varied by race/ethnicity, with 49.1% of Hispanics/Latinos and 43.2% of Blacks/African Americans with no coverage compared with 24.4% of White clients (Table 2). This percentage also varied by gender. The percentages with no health care coverage was 38.2% among males and 38.4% among females. The lack of coverage was 47.5% among transgender women and 43.3% among transgender men (Table 3).

**Higher percentages of ADAP clients from racial/ethnic minority populations are living at or below 100% FPL compared with White ADAP clients.** In 2018, among race/ethnicity groups, Hispanics/Latinos had the highest percentage of clients at or below 100% FPL (49.2%), followed by American Indians/Alaska Natives (48.6%), Blacks/African Americans (47.9%), clients of multiple races (42.4%), Native Hawaiians/Pacific Islanders (38.4%), Asians (36.5%), and Whites (33.7%) (Table 2).

**Higher percentages of female and transgender ADAP clients are living at or below 100% FPL compared with male clients.** In 2018, among female clients, 51.4% were living at or below 100% FPL, compared with 41.0% of male clients. Among transgender women, transgender men, and clients of other gender identities, 62.1%, 51.2%, and 66.7%, respectively, were living at or below 100% FPL (Table 3).

<sup>1</sup> Due to rounding, percentages may not sum to 100.0%.

## Service Utilization

**The percentage of clients receiving only full-pay medication assistance has decreased, whereas an increased percentage of clients are receiving other services or a combination of services.**

Among ADAP clients with service utilization information in 2018, 47.7% received full-pay medication assistance only, a decrease from 64.1% in 2014. Concurrently, 19.4% of ADAP clients in 2018 received medication co-pay/deductible assistance from ADAPs, compared with 12.3% in 2014. The percentage of clients receiving multiple services also increased from 17.1% in 2014 to 28.6% in 2018 (Table 1). These changes may be attributed to changes in the health care landscape during this timeframe.

**The percentage of clients receiving full-pay medication assistance is higher among clients younger than age 50 years, and the percentage receiving medication co-pay/deductible assistance is higher among clients aged 50 years and older.** In 2018, 68.4% of clients accessing full-pay medication assistance were younger than age 50. In comparison, among clients accessing medication co-pay/deductible assistance, 67.0% were aged 50 years and older. The distributions of clients receiving insurance premium assistance or receiving multiple services were relatively even between clients older and younger than 50 years of age (Table 7).

**For each assistance type, distribution differs by HHS Region.** In 2018, among clients receiving medication co-pay/deductible assistance, the highest percentage were in Region 9 (26.6%; Arizona, California, Guam, Hawaii, and Nevada). Among ADAP clients receiving full-pay medication only, the highest percentage was in Region 4 (37.5%; Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee). Region 4 also had the highest percentage of ADAP clients receiving multiple services (21.9%) and insurance premium assistance (20.0%) compared with other regions (Table 7).

# TECHNICAL NOTES

---

The AIDS Drug Assistance Program (ADAP) Data Report (ADR) is the U.S. Department of Health and Human Services (HHS), Health Resources and Services Administration (HRSA), HIV/AIDS Bureau's (HAB) primary source of annual client-level data to evaluate the reach of the ADAP program on a national level. The ADR allows HAB to characterize individuals using the program, describe ADAP-funded services being used, and delineate costs associated with these services [6].

The ADR was developed and implemented in 2013. All Part B ADAP recipients are required to submit ADR data as a condition of the Ryan White HIV/AIDS Program (RWHAP) Part B grant award. The ADR consists of two components: (1) the Recipient Report and (2) the Client Report. The Recipient Report is a collection of information about ADAP administration, funding, and policies. The Client Report (or client-level data) is a collection of de-identified records that includes each ADAP client's basic demographic data, enrollment and certification information, and client-level data for clients enrolled during the calendar year reporting period (January 1 to December 31) [6].

Although the ADR may include clients who received both ADAP and non-ADAP RWHAP services during the reporting period, ADR data do not include information on non-ADAP RWHAP services (e.g., outpatient ambulatory health services), nor does the ADR collect information to identify which clients overlap with other RWHAP services. Client-level data from non-ADAP RWHAP services are reported through another data system and are published annually in the *RWHAP Annual Client-Level Data Report* [5].

## PRESENTATION OF DATA

The data in this report include information received by HRSA HAB for clients served by ADAP during calendar years 2014–2018. The purpose of the client demographics is to describe the sociodemographic characteristics of all clients **enrolled** in the ADAP, **regardless of whether they received services** (i.e., a client can be enrolled in ADAP but not use the service) [6].

- Tables 1–7: National-level data—Numbers and percentages of clients served by ADAP (non-RWHAP Services Report [RSR]), presented by year, selected demographic stratifications, HHS region, and services received.
- Tables 8–13: State-level data—Numbers and percentages of clients served by the ADAP (non-RSR) by state, presented by selected demographic stratifications

Tables 1–7 display subtotals and the overall totals for each subpopulation. The subtotals are displayed to reflect the denominator used for the percentage calculation of each subpopulation. In some cases, percentages may not sum to 100.0% because of rounding. Because of missing data, the values in each column may not sum to the column total.

## ADAP Clients

To be eligible for enrollment in ADAP services, a client must have a diagnosis of HIV and have a low income (defined by the ADAP in the state of residence). An ADAP client is any person who is certified as eligible to receive ADAP services during the reporting period, regardless of whether the person used ADAP services during the reporting period. In the event of a funding shortage, clients may be placed on a waiting list; however, in 2018, there were no ADAP waiting lists [6].

## Age Group

Recipients are required to report the ADAP client's year of birth. This information is used to calculate the client's age during the designated year as a discrete variable. For tables displaying age groups

(Tables 1–7), client ages were categorized to align with the Centers for Disease Control and Prevention’s National HIV Surveillance System age group delineations. The age group delineations are as follow: <13, 13–14, 15–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64, and ≥65 years. In Table 9, client ages were categorized using broader age group delineations: <13, 13–24, 25–34, 35–44, 45–54, 55–64, and ≥65 years.

## **Race/Ethnicity**

Recipients reported race/ethnicity information for ADAP clients according to the Office of Management and Budget (OMB) reporting standards. The OMB standards have five categories for race: American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White. Data on ethnicity have two categories: (1) Hispanic or Latino, and (2) not Hispanic or Latino. Race and ethnicity are submitted as separate variables and combined for analysis. The race/ethnicity variable is categorized as American Indian or Alaska Native, Asian, Black or African American, Hispanic or Latino, Native Hawaiian or other Pacific Islander, White, and multiple races (two or more categories of race reported).

In this report, clients categorized by race did not report a Hispanic or Latino ethnicity. Clients categorized as Hispanic/Latino can be of any race. ADAP recipients are expected to make every effort to obtain and report race and ethnicity, based on each client’s self-report. Self-identification is the preferred means of obtaining this information.

## **Gender**

Gender designations in this report are male, female, or transgender. Transgender is an umbrella term for people whose gender identity or expression is different from their sex assigned at birth. Transgender variable options in the ADR include transgender female-to-male (FTM), transgender male-to-female (MTF), and transgender other, which includes people who do not identify with the provided transgender variable options and/or do not identify with the binary options of male/female (e.g., non-binary, two spirit, genderqueer). Gender-related data are based on client self-report. Self-identification is the preferred means of obtaining this information.

## **Federal Poverty Level**

Federal poverty level (FPL) characterizes the client’s annual household income as a percentage of the FPL at the end of the reporting period. The poverty levels were categorized as 0–100% FPL, 101–138% FPL, 139–250% FPL, 251–400% FPL, and >400% FPL.

## **Health Care Coverage**

Recipients are required to report all sources of health care coverage that each ADAP client had for any part of the reporting period, regardless of whether the ADAP paid for it. Health care coverage was categorized as private employer, private individual, Medicare, Medicaid, Medicare and Medicaid (dual eligibility), Veterans Administration, Indian Health Service, other plan, multiple coverages, and no coverage. The Medicaid classification also includes the Children’s Health Insurance Program (CHIP) and other public state health care coverage programs. The Medicare Part D classification is a stand-alone prescription drug coverage insurance for clients on Medicare.

## **ADAP Services**

ADAP services include both full-pay medication assistance and health care coverage premium and cost-sharing assistance, which are provided to eligible clients enrolled in ADAP. All ADAP funds, regardless of their source (e.g., state funds, RWHAP Part B ADAP Base, RWHAP Part B Base, RWHAP Part B

Supplemental Funding, ADAP Emergency Relief Funds, RWHAP Part A contributions, 340B rebates, ADAP Crisis Task Force Rebates), are reported in the ADR [6].

Medication assistance (i.e., full-pay medication support) is the use of ADAP funds to purchase U.S. Food and Drug Administration–approved medications for the treatment of HIV or for the prevention and treatment of other opportunistic infections commonly associated with HIV/AIDS and to support a client’s retention in care.

Health care coverage assistance is the use of ADAP funds to pay for one or more of the following:

- Full premium payment
- Partial premium payment
- Medication co-pay/deductible (including Medicare Part D coinsurance, co-payment, or donut hole coverage)

A full premium payment is when the ADAP pays 100% of the client’s health insurance premium. A partial payment is when the ADAP pays a portion (i.e., <100%) of the health insurance premium. A medication co-pay/deductible is when the ADAP pays the co-pay/deductible for the client’s HIV-related medication, including Medicare Part D–related costs. Medication co-pays, deductibles, and coinsurance are considered health care coverage assistance services, not medication services [6].

## Region

HHS uses 10 geographic designations for classifying regions of the United States that encompass all states and territories. The classification of states and territories within these regions are as follows:

- Region 1: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
- Region 2: New Jersey, New York, Puerto Rico, U.S. Virgin Islands
- Region 3: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia
- Region 4: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee
- Region 5: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin
- Region 6: Arkansas, Louisiana, New Mexico, Oklahoma, Texas
- Region 7: Iowa, Kansas, Missouri, Nebraska
- Region 8: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming
- Region 9: Arizona, California, Guam, Hawaii, Nevada
- Region 10: Alaska, Idaho, Oregon, Washington

The six U.S. Pacific jurisdictions are included in HHS Region 9; however, only Guam submits client-level data. The other jurisdictions, therefore, are not included in this report. Puerto Rico and the U.S. Virgin Islands are included in Region 2.

## State

State data are displayed in Tables 8–13. State-level analyses include data submitted for all RWHAP ADAP services. Clients receiving services in multiple states are not included in state-specific totals; these clients make up less than 2% of the total RWHAP population. In addition, data presented by state include data for all clients served by State ADAPs and are not separated by the type of ADAP-specific funding (i.e., RWHAP Part B, RWHAP Part B Supplemental, and ADAP Emergency Relief Funds).
