The sanctuary is home to numerous shipwrecks, reminders of our nation's maritime heritage.

Gerry E. Studds Stellwagen Bank National Marine Sanctuary (SBNMS)

stretches between Cape Ann and Cape Cod and is east of the Boston metropolitan region. The 842 square mile sanctuary hosts one of the most biologically diverse ecosystems in the Gulf of Maine. The underwater landscape was formed by the retreat of glaciers during the last Great Ice Age. Renowned for its biological diversity and remarkable productivity, the sanctuary is a critical feeding and nursery ground for several whale and dolphin species and has become one of the world's premier whale watching destinations. Named an Important Bird Area by the National Audubon Society, the sanctuary's rich waters serve as a stopover location for migrating birds and a seasonal destination for both summer and winter species. The sanctuary's position astride the historic shipping routes and fishing grounds for Massachusetts's oldest ports also makes it a repository for shipwrecks representing several hundred years of maritime transport.

Research and Monitoring

On-going projects are focused in three main areas: (1) marine mammal protection, (2) biodiversity conservation, and (3) maritime heritage preservation. Researchers study hump-

back whale behaviors through the use of non-invasive tags that record data, while other scientists measure man-made noises and analyze the effects on right whale communication. With satellite tags, scientists study great shearwater flight paths and prey distribution. Periodic seabird surveys by researchers and volunteers help the sanctuary determine distribution and abundance. Other studies include shipwreck identification and documentation; forage fish abundance, distribution and status; internal wave formation; seafloor habitat characterization; and cod spawning ground determination using acoustic technologies.

Education and Outreach

The sanctuary produces a variety of print and electronic publications, including the online newsletter, "Stellwagen Bank E-Notes". The sanctuary co-sponsors an annual K-12 marine art contest with Massachusetts Marine Educators and helps organize an introductory marine science course with Massasoit Community College. The sanctuary also co-sponsors education programs for recreational boaters and the whale watching community; provides curricular materials for educators; offers informal education programs on shipwrecks and whales; and supports short and long-term exhibits at several of the region's major museums and aquariums.

Stellwagen Bank National Marine Sanctuary is one of the best whale watching destinations in the world.

Stellwagen Bank National Marine Sanctuary

Location

25 miles east of Boston,
3 miles southeast of
Cape Ann and 3 miles
north of Cape Cod

Protected Area

842 square miles

Designation

November 1992

Habitats

Boulder ridges
Gravel banks
Muddy basins
Open ocean
Rocky ledges
Sandy banks

Key Species

American lobster
Atlantic bluefin tuna
Atlantic cod
Atlantic white-sided dolphin
Great shearwater
Humpback whale
North Atlantic right whale
Razorbill
Sand lance
Wilson's storm petrel

NATIONAL MARINE SANCTUARY SYSTEM
