

USDA-ARS | U.S. Wheat and Barley Scab Initiative
FY21 FINAL Performance Progress Report

Due date: July 26, 2023

Cover Page

USDA-ARS Agreement ID:	59-0206-0-163
USDA-ARS Agreement Title:	FHB Management in Barley: QTL Deployment and Phenotyping
Principle Investigator (PI):	Thomas Baldwin
Institution:	North Dakota State University
Institution UEI:	EZ4WPGRE1RD5
Fiscal Year:	2021
FY21 USDA-ARS Award Amount:	\$23,715
PI Mailing Address:	North Dakota State University, Department of Plant Pathology PO Box 6050, Dept. 7660 Fargo, ND 58108-6050
PI E-mail:	thomas.t.baldwin@ndsu.edu
PI Phone:	701-231-7078
Period of Performance:	6/12/21 - 6/11/23
Reporting Period End Date:	6/11/2023

USWBSI Individual Project(s)

USWBSI Research Category*	Project Title	ARS Award Amount
BAR-CP	Coordination of NABSEN and Collaborative Screening of Western US Barley Germplasm.	\$13,175
BAR-CP	Development of 2-rowed FHB Resistance Germplasm and Cultivars	\$2,640
BAR-CP	Identification, Characterization, & Development of Widely-adapted FHB-resistant Germplasm	\$2,444
BAR-CP	Genomics Selection for FHB Resistance and Malting Quality in Spring Malting Barley	\$5,456
FY21 Total ARS Award Amount		\$23,715

I am submitting this report as a: FINAL Report

I certify to the best of my knowledge and belief that this report is correct and complete for performance of activities for the purposes set forth in the award documents.

 PBG – Pathogen Biology & Genetics
 TSCL – Transformational Science
 VDHR – Variety Development & Uniform Nurseries
 NWW – Northern Soft Winter Wheat Region
 SPR – Spring Wheat Region
 SWW – Southern Soft Red Winter Wheat Region

Project 1: Coordination of NABSEN and Collaborative Screening of Western US Barley Germplasm.

1. What are the major goals and objectives of the research project?

The North American Barley Scab Evaluation Nursery is a long running coordinated FHB screening nursery and provides a pivot role for evaluating elite barley lines for the highest level of FHB and DON resistance prior to variety release. This program coordinated, received and distributed advanced breeding lines seed form the University of Minnesota, Busch Ag, USDA-ARS, Canadian breeding Group and NDSU breeding programs in our FHB nurseries in Fargo, and Langdon, ND. These advanced lines were grown across five locations, Fargo, Casselton and Langdon, ND and Crookston and St. Paul, MN. Plant nurseries were grown to compare FHB severity and incidence, heading date and DON accumulation on misted and dryland plots. The overall project goal is to promote collaboration between North American barley breeding programs to advance and distribute elite barley germplasm with resistance to Fusarium head blight. Coordinate the exchange and distribution of advanced FHB resistant barley germplasm between NABSEN collaborators to expedite the development of resistant barley varieties

2. What was accomplished under these goals or objectives? (For each major goal/objective, address these three items below.)

a) What were the major activities?

We grew, evaluated, and harvested a total of 45 advanced breeding lines planted in short rows and with 3 replications in 2021 in Fargo and Langdon misted nurseries. The misted nurseries were inoculated with infected FHB corn spawn to ensure good infection. Heading date, FHB incidence and severity notes were collected along with DON accumulation.

b) What were the significant results?

Note that 2021 saw record drought across the country and this drought severely affected FHB in the Fargo nursery. However, the Langdon ND nursery had comparable or even higher disease ratings and DON levels as prior years.

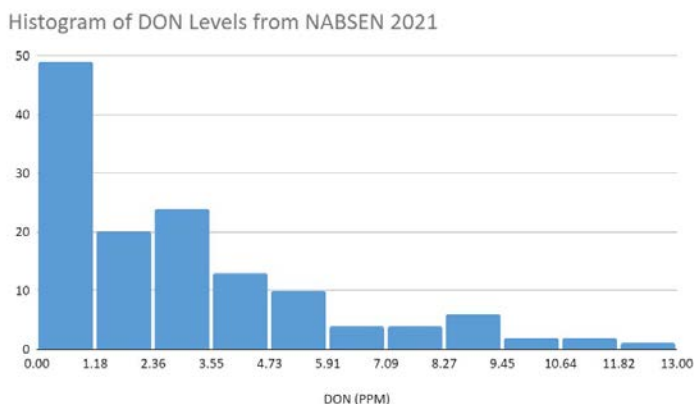

Figure 1: histogram of DON measurements from Fargo Misting Nursery in 2021

Figure 2: histogram of DON measurements from Langdon Misting Nursery in 2021

c) List key outcomes or other achievements.

In 2021 elite barley lines were evaluated for FHB and DON resistance

3. What opportunities for training and professional development has the project provided?

Research Specialist and Graduate Student associated with this program was sent to the 2022 Scab forum

4. How have the results been disseminated to communities of interest?

The results of NABSEN 2021 were published in the USWBSI website and data was uploaded to T3.

Project 2: Development of 2-rowed FHB Resistance Germplasm and Cultivars

1. What are the major goals and objectives of the research project?

This project aims to conduct multiple-year/location evaluation of barley breeding lines from Idaho and introduced lines for FHB resistance. We hope to obtain enough data to conclude which lines are FHB resistant or produce low DON from Dr. Gongshe Hu's breeding program.

1. What was accomplished under these goals or objectives? *(For each major goal/objective, address these three items below.)*

a) What were the major activities?

100 Lines from Dr. Gongshe Hu's program were planted in 3 replicates in Fargo and Langdon misted nurseries. FHB scores were taken and lines were processed for DON analysis.

b) What were the significant results?

FHB scores and DON levels were reported to Dr. Hu.

c) List key outcomes or other achievements.

Significantly lower disease was noted in Fargo nurseries for 2021. However, the Langdon, ND nursery had significant disease

2. What opportunities for training and professional development has the project provided?

NA

3. How have the results been disseminated to communities of interest?

FHB scores and DON levels were reported to Dr. Hu.

Project 3: Identification, Characterization, & Development of Widely-adapted FHB-resistant Germplasm

1. What are the major goals and objectives of the research project?

This project will broaden the adaptability of Aberdeen, Idaho barley germplasm by producing elite spring and winter germplasm with broad spectrum disease resistance with an emphasis on Fusarium head blight resistance. To accomplish this, we will identify resistant lines in elite winter germplasm; cross FHB resistant spring lines to malting germplasm carrying broad-spectrum disease resistance.

2. What was accomplished under these goals or objectives? *(For each major goal/objective, address these three items below.)*

a) What were the major activities?

Four biparental populations were planted only in Langdon misted nursery in 2021 for direct comparison of the population of spring malt barley. One replication was planted for each line for an initial assessment of the breeding material (2,000 plots total).

b) What were the significant results?

Langdon misted nursery in 2021 had above average levels of FHB and DON.

c) List key outcomes or other achievements.

Key outcomes include successful screening of biparental mapping populations for FHB in Langdon, ND. This allowed for lines to be chosen for the testing the following year.

3. What opportunities for training and professional development has the project provided?

NA

4. How have the results been disseminated to communities of interest?

FHB scores and DON levels were reported to Dr. Kathy Klos for analysis.

Project 4: Genomics Selection for FHB Resistance and Malting Quality in Spring Malting Barley

1. What are the major goals and objectives of the research project?

To increase the level of FHB resistance in Aberdeen malting barley germplasm while maintaining outstanding malt quality.

Project Objectives:

1) Evaluate FHB resistance and malt quality of lines in a training population selected to represent the Aberdeen, ID spring malting barley breeding program.

2) Develop and apply a genomic selection prediction model for FHB resistance in the Aberdeen spring malting barley germplasm, accounting for the need to maintain acceptable malt quality.

2. What was accomplished under these goals or objectives? (For each major goal/objective, address these three items below.)

a) What were the major activities?

In 2021, the Aberdeen training population was planted in the Fargo misted FHB nursery. It was planted in two replicated blocks (total of 500 plots). Plots were rated for FHB severity, harvested and processed for DON analysis.

b) What were the significant results?

2021 Fargo nursery was significantly affected by the 2021 drought and produced little FHB disease and low DON measurements.

c) List key outcomes or other achievements.

The Aberdeen, ID malt barley training population was evaluated in Fargo, ND in 2021. This nursery was greatly affected by the drought. As a result, FHB and DON score were significantly lower than in previous years.

3. What opportunities for training and professional development has the project provided?

NA

4. How have the results been disseminated to communities of interest?

FHB scores and DON levels were reported to Dr. Kathy Klos for analysis.

Publications, Conference Papers, and Presentations

Please include a listing of all your publications/presentations about your FHB work that were a result of funding from your FY21 grant award. Only citations for publications published (submitted or accepted) or presentations presented during the **award period** should be included.

Did you publish/submit or present anything during this award period?

- Yes, I've included the citation reference in listing(s) below.
 No, I have nothing to report.

Journal publications as a result of FY21 award

List peer-reviewed articles or papers appearing in scientific, technical, or professional journals. Include any peer-reviewed publication in the periodically published proceedings of a scientific society, a conference, or the like.

Identify for each publication: Author(s); title; journal; volume; year; page numbers; status of publication (published [include DOI#]; accepted, awaiting publication; submitted, under review; other); acknowledgement of federal support (yes/no).

Books or other non-periodical, one-time publications as a result of FY21 award

Report any book, monograph, dissertation, abstract, or the like published as or in a separate publication, rather than a periodical or series. Include any significant publication in the proceedings of a one-time conference or in the report of a one-time study, commission, or the like.

Identify for each one-time publication: Author(s); title; editor; title of collection, if applicable; bibliographic information; year; type of publication (book, thesis, or dissertation, other); status of publication (published; accepted, awaiting publication; submitted, under review; other); acknowledgement of federal support (yes/no).

Other publications, conference papers and presentations as a result of FY21 award

Identify any other publications, conference papers and/or presentations not reported above. Specify the status of the publication.
