

USDA-ARS
U.S. Wheat and Barley Scab Initiative
FY18 Final Performance Report
NCE for FY19
Due date: September 30, 2020

Cover Page

Principle Investigator (PI):	Carl Bradley
Institution:	University of Kentucky
E-mail:	carl.bradley@uky.edu
Phone:	859- 562-1306
Fiscal Year:	2018 (<i>NCE for FY19</i>)
USDA-ARS Agreement ID:	59-0206-5-007
USDA-ARS Agreement Title:	Applied Management of Fusarium Head Blight in Kentucky.
FY18 USDA-ARS Award Amount:	\$ 38,452
Recipient Organization:	University of Kentucky Research Foundation University Station Lexington, KY 40506-0057
DUNS Number:	939017877
EIN:	61-6033693
Recipient Identifying Number or Account Number:	3200000233
Project/Grant Reporting Period:	09/08/19 - 09/07/20
Reporting Period End Date:	9/7/2020

USWBSI Individual Project(s)

USWBSI Research Category*	Project Title	ARS Award Amount
MGMT	Applied Management of Fusarium Head Blight in Kentucky.	\$ 26,636
MGMT	Educating Soft Winter Wheat Producers on MR Varieties as the Foundation of FHB Management.	\$ 11,816
FY18 Total ARS Award Amount		\$ 38,452

Principal Investigator

9/28/2020

Date

* MGMT – FHB Management
 FST – Food Safety & Toxicology
 GDER – Gene Discovery & Engineering Resistance
 PBG – Pathogen Biology & Genetics
 EC-HQ – Executive Committee-Headquarters
 BAR-CP – Barley Coordinated Project
 DUR-CP – Durum Coordinated Project
 HWW-CP – Hard Winter Wheat Coordinated Project
 VDHR – Variety Development & Uniform Nurseries – Sub categories are below:
 SPR – Spring Wheat Region
 NWW – Northern Soft Winter Wheat Region
 SWW – Southern Soft Red Winter Wheat Region

Project 1: *Applied Management of Fusarium Head Blight in Kentucky.*

1. What are the major goals and objectives of the research project?

The overall project goal is to improve management of FHB and DON. The specific objectives of the proposed study are: 1) evaluate the integrated effects of fungicide treatment and genetic resistance on FHB and DON in all major grain classes, with emphasis on a new fungicide, Miravis Ace; 2) compare the efficacy of Miravis Ace when applied at heading or at anthesis to that of standard anthesis application of Prosaro or Caramba; 3) generate data to further quantify the economic benefit of FHB/DON management strategies; 4) develop more robust “best-management practices” for FHB and DON; and 5) generate data to validate and advance the development of FHB and DON risk prediction models.

2. What was accomplished under these goals or objectives? (*For each major goal/objective, address items a-b) below.*)

a) What were the major activities?

The major activities including conducting an “integrated management trial” and a “uniform fungicide trial” at the UK-Research & Education Center at Princeton, KY. The collected data were then sent to Dr. Pierce Paul’s (Ohio State University) research program for multi-state data analyses. Results from the research trials also were presented at scientific and extension meetings

b) What were the significant results?

For the “integrated management trial”, mean FHB index values ranged from 0.1 to 12.5, and mean DON values ranged from 0.2 to 4.6 ppm. Overall, the FHB index values and DON values were greatest in the cultivar that was most susceptible to FHB (FHB index values of 12.5 vs. 8.3 vs. 1.4, and DON values of 4.6 ppm vs. 1.5 ppm vs. 0.7 ppm for the non-treated controls of the MR vs MS vs S cultivars, respectively). For the S and MS cultivars, all fungicide treatment significantly ($P \leq 0.05$) reduced FHB index values relative to the non-treated controls. For the MR cultivar, FHB index values were too low to observe any significant differences among treatments. For the S cultivar, all fungicide treatments significantly reduced DON values relative to the non-treated control. For the MS cultivar, all fungicide treatments, except Miravis Ace applied at Feekes 10.3, reduced DON values relative to the non-treated control. For the MR cultivar, no differences among treatments for DON values were observed due to the low DON values in all treatments (DON values were ≤ 0.7 ppm for the MR cultivar).

For the “uniform fungicide trial”, mean FHB index values ranged from 0.2 to 8.3, and DON values ranged from 2.1 to 7 ppm. All treatments, except Headline at Feekes 10, significantly reduced FHB index relative to the non-treated control. The only treatments that significantly reduced DON values relative to the non-treated control were treatments with Miravis Ace at Feekes 10.51 that were followed with either Prosaro, Caramba, or Folicur 4 days later. Headline applied at Feekes 10 significantly increased DON relative to the non-treated control.

c) List key outcomes or other achievements.

Much-needed information about how well the new fungicide Miravis Ace performs in managing FHB and DON was obtained. Wheat farmers in Kentucky and the region, are eager to see unbiased research results with this new fungicide. As observed in previous studies and confirmed in this research, the greatest reduction in FHB and DON occurs when moderately resistant cultivars are planted and sprayed with an effective fungicide at the correct application timing.

3. Was this research impacted by the COVID-19 pandemic (i.e. university shutdowns, reduced or lack of support personnel, etc.)? If yes, please explain how this research was impacted or is continuing to be impacted.

A reduction in summer seasonal technical help was applied at the University of Kentucky. In addition, restrictions on the number of people per university vehicle was applied. These changes resulted in longer hours (in some cases overtime being accrued) for support personnel as well as additional expenses on University of Kentucky motor pool vehicles.

4. What opportunities for training and professional development has the project provided?

Conducting this research allowed one undergraduate student (from Murray State University), a M.S. graduate student from the University of Kentucky, a postdoctoral scholar from the University of Kentucky, a research analyst from the University of Kentucky, and an extension associate from the University of Kentucky to gain hands-on learning about the Fusarium head blight disease cycle, impacts of this disease, and management options. In addition, the project has allowed the PI and a graduate student to attend the National Fusarium Head Blight Forum, which has promoted interaction with other scientists working on this disease. Results from this project are presented to farmers, crop consultants, and others, which presents opportunities for their professional development and learning.

5. How have the results been disseminated to communities of interest?

Results of the Coordinated Management Trials have been disseminated to the scientific community through journal articles and through posters presented at the National Fusarium Head Blight Forum and the American Phytopathological Society Annual Meeting. Results also have been disseminated to stakeholders (i.e. farmers, Extension personnel, crop consultants, industry representatives, and commodity representatives) through presentations at Extension meetings, field days, and articles written in on-line Extension newsletters and blogs.

Project 2: *Educating Soft Winter Wheat Producers on MR Varieties as the Foundation of FHB Management.*

1. What are the major goals and objectives of the research project?

This project was aimed at strengthening the message and enhancing adoption of variety resistance, particularly in soft winter wheat. The objectives included: developing a national webinar focused on certified crop advisors (CCAs), seeking opportunities to address and inform millers, elevator operators, and other grain purchasers at their meetings and via their information networks, and coordinating with state extension specialists to ensure state commodity groups are receiving and disseminating research-based results.

2. What was accomplished under these goals or objectives? (For each major goal/objective, address items a-b) below.)

a) What were the major activities?

The major activity that occurred was the development of a 2-part webinar series titled, “Management of Fusarium head blight (scab) of wheat”. The two webinars in the series were titled, “Understanding the basics of Fusarium head blight” and “Management of Fusarium head blight (scab) of wheat with fungicides”, and were presented live on February 11th and 18th, 2019, respectively. These webinars were presented as part of the Agronomy Society of America’s on-line training program that is focused on allowing CCAs to get continuing education units (CEUs). Although these webinars were presented live prior to this reporting period, the recorded webinars are still freely available on-line for CCAs and others to watch.

b) What were the significant results?

The two webinars were successful. Registration of attendees for the live webinars approached 1,000 people, and the recorded webinars available on-line continue to be viewed.

c) List key outcomes or other achievements.

In total, approximately 1,000 people attended both webinars. In addition, the recorded webinars are available on-line and can be accessed at any time. We continue to utilize these webinars to help educate stakeholders about the importance of utilizing moderately-resistant varieties for managing FHB and DON.

3. Was this research impacted by the COVID-19 pandemic (i.e. university shutdowns, reduced or lack of support personnel, etc.)? If yes, please explain how this research was impacted or is continuing to be impacted.

This project was not impacted by the COVID-19 pandemic.

FY18 Final Performance Report
PI: Bradley, Carl
USDA-ARS Agreement #: 59-0206-5-007
Reporting Period: 09/08/19 - 09/07/20

4. What opportunities for training and professional development has the project provided?

These webinars provided an opportunity for many CCAs across the U.S. to learn more about FHB and how to utilize moderately-resistant varieties as part of an overall FHB management program.

5. How have the results been disseminated to communities of interest?

The webinar is available on-line at: <https://www.agronomy.org/education/classroom/classes>. Information about the webinar was disseminated through e-mail list-servs, through press releases, and through on-line newsletters distributed by commodity groups and university extension specialists.

Training of Next Generation Scientists

Instructions: Please answer the following questions as it pertains to the FY18 award period (09/08/19 - 09/07/20). The term “support” below includes any level of benefit to the student, ranging from full stipend plus tuition to the situation where the student’s stipend was paid from other funds, but who learned how to rate scab in a misted nursery paid for by the USWBSI, and anything in between.

- 1. Did any graduate students in your research program supported by funding from your USWBSI grant earn their MS degree during the FY18 award period?**

No

If yes, how many?

- 2. Did any graduate students in your research program supported by funding from your USWBSI grant earn their Ph.D. degree during the FY18 award period?**

No

If yes, how many?

- 3. Have any post docs who worked for you during the FY18 award period and were supported by funding from your USWBSI grant taken faculty positions with universities?**

No

If yes, how many?

- 4. Have any post docs who worked for you during the FY18 award period and were supported by funding from your USWBSI grant gone on to take positions with private ag-related companies or federal agencies?**

No

If yes, how many?

FY18 Final Performance Report
 PI: Bradley, Carl
 USDA-ARS Agreement #: 59-0206-5-007
 Reporting Period: 09/08/19 - 09/07/20

Release of Germplasm/Cultivars

Instructions: In the table below, list all germplasm and/or cultivars released with full or partial support through the USWBSI during the FY18 award period. All columns must be completed for each listed germplasm/cultivar. Use the key below the table for Grain Class abbreviations.

NOTE: Leave blank if you have nothing to report or if your grant did NOT include any VDHR-related projects.

Name of Germplasm/Cultivar	Grain Class	FHB Resistance (S, MS, MR, R, where R represents your most resistant check)	FHB Rating (0-9)	Year Released

Add rows if needed.

NOTE: List the associated release notice or publication under the appropriate sub-section in the ‘Publications’ section of the FPR.

Abbreviations for Grain Classes

- Barley - BAR
- Durum - DUR
- Hard Red Winter - HRW
- Hard White Winter - HWW
- Hard Red Spring - HRS
- Soft Red Winter - SRW
- Soft White Winter - SWW

USDA-ARS Agreement #: 59-0206-5-007
Reporting Period: 09/08/19 - 09/07/20

Publications, Conference Papers, and Presentations

Instructions: Refer to the FY18-FPR_Instructions for detailed more instructions for listing publications/presentations about your work that resulted from all of the projects included in the FY18 grant award. Only citations for publications published (submitted or accepted) or presentations presented during the **award period (09/08/19 - 09/07/20)** should be included. If you did not publish/submit or present anything, state 'Nothing to Report' directly above the Journal publications section.

NOTE: Directly below each citation, you **must** indicate the Status (i.e. published, submitted, etc.) and whether acknowledgement of Federal support was indicated in the publication/presentation.

Journal publications.

Anderson, N. R., A. N. Freije, G. C. Bergstrom, C. A. Bradley, C. Cowger, T. Faske, C. Hollier, N. Kleczewski, G. B. Padgett, P. Paul, T. Price, and K. A. Wise. 2020. Sensitivity of *Fusarium graminearum* to metconazole and tebuconazole fungicides before and after widespread use in wheat in the United States. *Plant Health Progress* 21:85-90.
