

**USDA-ARS/
U.S. Wheat and Barley Scab Initiative
FY19 Final Performance Progress Report
Due date: August 31, 2021**

Cover Page

Principle Investigator (PI):	Jason Cook
Institution:	Montana State University
E-mail:	jason.cook@montana.edu
Phone:	406-994-5060
Fiscal Year:	2019
USDA-ARS Agreement ID:	59-0206-9-121
USDA-ARS Agreement Title:	Development of Montana Adapted FHB Resistant Winter Wheat Varieties
FY19 USDA-ARS Award Amount:	\$ 26,866
Recipient Organization:	Montana State University Office of Sponsored Programs Montana State University PO Box 172470 Bozeman, MT 59717-2470
DUNS Number:	625447982
EIN:	81-6010045
Recipient Identifying Number or Account Number:	W7936
Project/Grant Reporting Period:	5/6/19 - 8/5/21
Reporting Period End Date:	8/5/2021

USWBSI Individual Project(s)

USWBSI Research Category*	Project Title	ARS Award Amount
HWW-CP	Development of Montana Adapted FHB Resistant Winter Wheat Varieties	\$ 26,866
FY19 Total ARS Award Amount		\$ 26,866

Principal Investigator

8/30/2021

Date

* MGMT – FHB Management
 FST – Food Safety & Toxicology
 R – Research
 S – Service (DON Testing Lab)
 GDER – Gene Discovery & Engineering Resistance
 PBG – Pathogen Biology & Genetics
 EC-HQ – Executive Committee-Headquarters
 BAR-CP – Barley Coordinated Project
 DUR-CP – Durum Coordinated Project
 HWW-CP – Hard Winter Wheat Coordinated Project
 VDHR – Variety Development & Uniform Nurseries – Sub categories are below:
 SPR – Spring Wheat Region
 NWW – Northern Soft Winter Wheat Region
 SWW – Southern Soft Red Winter Wheat Region

Project 1: *Development of Montana Adapted FHB Resistant Winter Wheat Varieties*

1. What are the major goals and objectives of the research project?

- 1) Integrate FHB resistance genes from FHB resistant winter and spring wheat germplasm into MSU's winter wheat breeding program using both conventional breeding and marker assisted backcrossing (MAB) to increase FHB resistant allele frequencies in the Montana winter wheat breeding program.
- 2) Phenotype Montana adapted winter wheat experimental lines for FHB resistance during the 2019 and 2020 field seasons. Experimental lines found to have FHB resistance will be considered for public release.

Deployment of FHB resistant winter wheat varieties adapted to Montana will help protect Montana's winter wheat grain producers and end-users from FHB infections and unacceptable deoxynivalenol (DON) levels that would prevent the sale of FHB infected winter wheat.

2. What was accomplished under these goals or objectives? (For each major goal/objective, address these three items below.)

a) What were the major activities?

Major activities included using MAB to integrate known FHB resistance genes into Montana adapted winter wheat germplasm. Secondly, crosses were made between FHB resistant winter wheat lines and susceptible Montana adapted winter wheat germplasm for conventional breeding. Lastly, experimental lines were phenotyped in FHB screening nurseries for FHB resistance.

b) What were the significant results?

Fifteen MT experimental lines were submitted to the 2020 FHB hard red winter wheat uniform screening nursery. Infection levels at all uniform screening nurseries were very good for differentiating FHB susceptible versus moderately resistant lines. I have not received DON data from these trials and suspect it is due to COVID-19 delays.

We also had excellent disease incidence at our mist irrigated FHB screening nursery located at the Southern Ag Research Center (SARC). The nursery contained 45 experimental lines and four check varieties. Data collected from the experimental lines showed FHB Severity was 47.2% (19.8 - 64.8), FHB Incidence was 100 for all lines and the FHB Index was the same as the severity ratings. Mean DON levels were 29.0 ppm and ranged from 3.5 ppm to 72.8 ppm. Emerson, our resistant check variety, had a severity rating of 19.8% and a DON level of 19.5 ppm. Our susceptible check variety,

Yellowstone, had a severity rating of 55% and a 72.8 ppm DON level. Experimental lines that stood out as having moderate resistance in the regional and SARC FHB screening nurseries were MT19116 and MT19122.

Marker assisted breeding is being used to incorporate *Fhb1* and *Fhb5A* into Montana adapted winter wheat lines with an emphasis on developing varieties resistant to both FHB and wheat stem sawfly. A total of 420 lines were planted in the field for evaluation and seed increase during the 2020 growing season and several lines were advanced for further testing in 2021. We are also using MAB to incorporate an *Fhb1* + Sr2 positive allele linkage group into our germplasm with the goal of maintaining both positive alleles in the winter wheat breeding program.

Lastly, our longtime winter wheat breeder, Dr. Phil Bruckner, retired in March 2021. We are currently in the process of hiring a new breeder, and we will inform the USWBSI when that is finalized.

c) List key outcomes or other achievements.

Key outcomes from our breeding efforts include acquiring FHB resistance information on Montana adapted experimental lines that carry *Fhb1* and native resistance from Emerson. Based on multiple years of data the *Fhb1* gene did not negatively impact yield and agronomic performance relative to the recurrent parents. Experimental lines with moderate FHB resistance were advanced in the breeding pipeline for additional testing in the 2021 yield trials. An additional set of 36 lines derived from FHB resistance sources are being evaluated in yield trials located in Huntley, MT, and Bozeman, MT during the 2021 growing season. Lines developed using MAB that carry *Fhb1* and *Fhb5A* have been planted for field evaluation in 2021.

3. Was this research impacted by the COVID-19 pandemic (i.e. university shutdowns and/or restrictions, reduced or lack of support personnel, etc.)? If yes, please explain how this research was impacted or is continuing to be impacted.

COVID-19 did not impact our operations.

4. What opportunities for training and professional development has the project provided?

None

FY19 Final Performance Progress Report

PI: Cook, Jason

USDA-ARS Agreement #: 59-0206-9-121

Reporting Period: 5/6/19 - 8/5/21

5. How have the results been disseminated to communities of interest?

We now have enough FHB data where we can provide FHB resistance ratings to Montana adapted varieties. Ratings and our work with the USWBSI have been communicated to Montana wheat producers and stakeholders through the use of periodicals, field days and social media. Our efforts to develop Montana adapted FHB resistant winter wheat varieties has received positive responses from the Montana wheat growing community.

Training of Next Generation Scientists

Instructions: Please answer the following questions as it pertains to the **FY19 award period (5/6/19 - 8/5/21)**. The term “support” below includes any level of benefit to the student, ranging from full stipend plus tuition to the situation where the student’s stipend was paid from other funds, but who learned how to rate scab in a misted nursery paid for by the USWBSI, and anything in between.

1. Did any graduate students in your research program supported by funding from your USWBSI grant earn their MS degree during the FY19 award period?

Yes No Not Applicable

If yes, how many? [Click to enter number here.](#)

2. Did any graduate students in your research program supported by funding from your USWBSI grant earn their Ph.D. degree during the FY19 award period?

Yes No Not Applicable

If yes, how many? [Click to enter number here.](#)

3. Have any post docs who worked for you during the FY19 award period and were supported by funding from your USWBSI grant taken faculty positions with universities?

Yes No Not Applicable

If yes, how many? [Click to enter number here.](#)

4. Have any post docs who worked for you during the FY19 award period and were supported by funding from your USWBSI grant gone on to take positions with private ag-related companies or federal agencies?

Yes No Not Applicable

If yes, how many? [Click to enter number here.](#)

Release of Germplasm/Cultivars

Instructions: In the table below, list all germplasm and/or cultivars released with full or partial support through the USWBSI during the **FY19 award period (5/6/19 - 8/5/21)**. All columns must be completed for each listed germplasm/cultivar. Use the key below the table for Grain Class abbreviations.

NOTE: Leave blank if you have nothing to report or if your grant did NOT include any VDHR-related projects.

Name of Germplasm/Cultivar	Grain Class	FHB Resistance	FHB Rating (0-9)	Year Released
Bobcat	HRW - Hard Red Winter	S - Susceptible	8	2019
Flathead	HRW - Hard Red Winter	S - Susceptible	8	2019
StandClear CLP	HRW - Hard Red Winter	S - Susceptible	8	2019

Publications, Conference Papers, and Presentations

Instructions: Refer to the FPR_Instructions for detailed more instructions for listing publications/presentations about your work that resulted from all of the projects included in the FY19 grant award. Only citations for publications published (submitted or accepted) or presentations presented during the **award period (5/6/19 - 8/5/21)** should be included. If you did not publish/submit or present anything, state 'Nothing to Report' directly above the Journal publications section.

NOTE: Directly below each citation, you **must** indicate the Status (i.e. published, submitted, etc.) and whether acknowledgement of Federal support was indicated in the publication/presentation. See example below for a poster presentation with an abstract:
