

THE MARKEY CANCER FOUNDATION CAMPAIGN FOR WORLD-CLASS CANCER CARE

Comprehensive Cancer Center Building

Cancer impacts all of us.

Kentucky has a world-class cancer problem that demands a world-class Markey.

Fortunately for Kentuckians, the Markey Cancer Center is saving lives.

Informed by cutting-edge science, Markey promises that anyone who seeks treatment here will receive the very best of care, in an environment that offers compassion and provides hope.

Markey is among the nation's best.

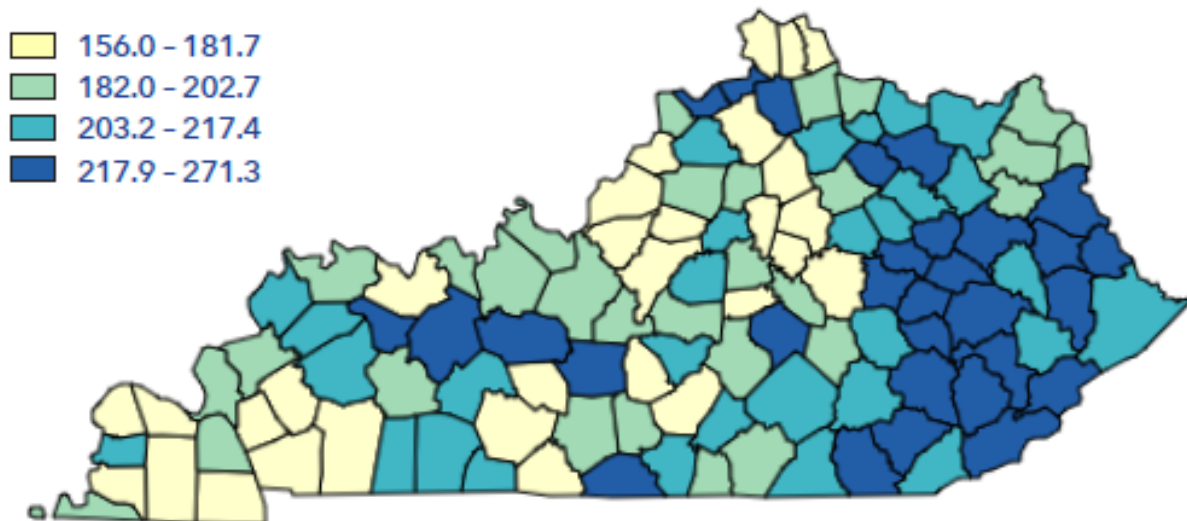

Out of 71 National Cancer Institute (NCI) designated cancer centers in America, Kentucky has only ONE - the Markey Cancer Center. Markey can provide better care for people across the state.

Taking Markey to World-Class Status

Under the leadership of Dr. Mark Evers, the Markey Cancer Center is poised to elevate its ground-breaking cancer research and patient care to world-class standards and recognition by pursuing *National Cancer Institute Comprehensive Status*.

Cancer Mortality Rates in Kentucky 2014-2018

Kentucky Rate: 189.3 per 100,000

World-Class Opportunities

Our Facilities - Tangible evidence of the institutional commitment to excellence is the building of a new facility for patient care and clinical research that creates a centralized home to offer world-class treatment. The new building will double patient capacity, ensure comfort and capable care close to home, and expand Markey's research footprint to pursue insights into the biology of cancer and translate that knowledge into treatments that reduce Kentucky's cancer burden.

Comprehensive Cancer Center Building

A cornerstone of Markey's commitment to winning the battle against cancer is the construction of new state-of-the-art Comprehensive Cancer Center Building to offer world-class patient care, research, and clinical facilities. This new centralized facility will serve as a major driver of clinical growth and early phase trials that address the unmet needs of Kentuckians dealing with all forms of cancer and offer them the most innovative cancer treatments available.

A key component of the new building is the Precision Medicine Center which is dedicated to providing patients with increased access to phase I and phase II clinical trials. Kentuckians will have access to cutting-edge drug trials that are not usually available to patients treated outside an NCI-designated cancer center such as Markey. Cancer patients who are enrolled in early phase clinical trials will receive much of their care in this new space by experienced staff specially trained in this field.

The Precision Medicine Center will serve patient referrals for unique trials and treatment options from UK HealthCare physicians, as well as physicians from across the Commonwealth.

FEATURED NAMED BUILDING OPPORTUNITIES

Precision Medicine Center (\$4 million)

Markey Cancer Center Administration Office Suite (\$1.4 million)

Markey Cancer Center Board Room - plus 3 multi-functional spaces (\$650,000)

Foundation Office Suite (\$650,000)
