NOAA TECHNICAL MEMORANDA
National Weather Service, Western Region Subseries

The National Weather Service (NWS) Western Region (WR) Subseries provides an informal medium for the documentation and quick dissemination of results not appropriate, or not yet ready, for formal publication. The series is used to report on work in progress, to describe technical procedures and practices, or to relate progress to a limited audience. These Technical Memoranda will report on investigations devoted primarily to regional and local problems of interest mainly to personnel, and hence will not be widely distributed.

Papers 1 to 25 are in the former series, ESSA Technical Memoranda, Western Region Technical Memoranda (WRTM); papers 24 to 59 are in the former series, ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM). Beginning with 60, the papers are part of the series, NOAA Technical Memoranda NWS. Out-of-print memoranda are not listed.

Papers 2 to 22, except for 5 (revised edition), are available from the National Weather Service Western Region, Scientific Services Division, 125 South State Street - Rm 1210, Salt Lake City, Utah 84138-1102. Paper 5 (revised edition), and all others beginning with 25 are available from the National Technical Information Service, U.S. Department of Commerce, Sills Building, 5285 Port Royal Road, Springfield, Virginia 22161. Prices vary for all paper copies; microfiche are $3.50. Order by accession number shown in parentheses at end of each entry.

ESSA Technical Memoranda (WRTM)

2 Climatological Precipitation Probabilities. Compiled by Lucianne Miller, December 1965.
3 Western Region Pre- and Post-FP-3 Program, December 1, 1965, to February 20, 1966. Edward D. Diemer, March 1966.
5 Station Descriptions of Local Effects on Synoptic Weather Patterns. Philip Williams, Jr., April 1966 (Revised November 1967, October 1969). (PB-17800)
8 Interpreting the RAREP. Herbert P. Benner, May 1966 (Revised January 1967).
11 Some Electrical Processes in the Atmosphere. J. Latham, June 1966.
17 A Digitalized Summary of Radar Echoes within 100 Miles of Sacramento, California. J. A. Youngberg and L. B. Overaas, December 1966.
21 An Objective Aid for Forecasting the End of East Winds in the Columbia Gorge, July through October. D. John Coparanis, April 1967.
22 Derivation of Radar Horizons in Mountainous Terrain. Roger G. Pappas, April 1967.

ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM)

25 Verification of Operation Probability of Precipitation Forecasts, April 1966-March 1967. W. W. Dickey, October 1967. (PB-176240)
26 A Study of Winds in the Lake Mead Recreation Area. R. P. Augulis, January 1968. (PB-177830)
28 Weather Extremes. R. J. Schmidli, April 1968 (Revised March 1986). (PB86 177672/AS). (Revised October 1991 - PB92-115062/AS)
29 Small-Scale Analysis and Prediction. Philip Williams, Jr., May 1968. (PB178425)
30 Numerical Weather Prediction and Synoptic Meteorology. CPT Thomas D. Murphy, USAF, May 1968. (AD 673365)
31 Precipitation Detection Probabilities by Salt Lake ARTC Radars. Robert K. Belesky, July 1968. (PB 179084)
32 Probability Forecasting--A Problem Analysis with Reference to the Portland Fire Weather District. Harold S. Ayer, July 1968. (PB 179289)
36 Temperature Trends in Sacramento--Another Heat Island. Anthony D. Lentini, February 1969. (PB 183055)
37 Disposal of Logging Residues Without Damage to Air Quality. Owen P. Cramer, March 1969. (PB 183057)
39 Upper-Air Lows Over Northwestern United States. A.L. Jacobson, April 1969. PB 184296)
40 The Man-Machine Mix in Applied Weather Forecasting in the 1970s. L.W. Snellman, August 1969. (PB 185068)
43 Forecasting Maximum Temperatures at Helena, Montana. David E. Olsen, October 1969. (PB 185762)
44 Estimated Return Periods for Short-Duration Precipitation in Arizona. Paul C. Kangieser, October 1969. (PB 187763)
46 Applications of the Net Radiometer to Short-Range Fog and Stratus Forecasting at Eugene, Oregon. L. Yee and E. Bates, December 1969. (PB 190476)
47 Statistical Analysis as a Flood Routing Tool. Robert J.C. Burnash, December 1969. (PB 188744)
48 Tsunami. Richard P. Augulis, February 1970. (PB 190157)
49 Predicting Precipitation Type. Robert J.C. Burnash and Floyd E. Hug, March 1970. (PB 190962)
50 Statistical Report on Aeroallergens (Pollens and Molds) Fort Huachuca, Arizona, 1969. Wayne S. Johnson, April 1970. (PB 191743)
51 Western Region Sea State and Surf Forecaster's Manual. Gordon C. Shields and Gerald B. Burdwell, July 1970. (PB 193102)

CLIMATE OF GREAT FALLS, MONTANA

Matt Jackson and D.C. Williamson

1.0 INTRODUCTION

The purpose of this text is to gather together as much pertinent climatic data as possible for Great Falls, Montana. The data is primarily intended as a reference for the local media, as well as agricultural, livestock, engineering and recreational interests in and around the city.

Great Falls weather records date back to the early 1890's with data being collected from a variety of sites during that time frame. It should also be noted that the Region in the vicinity of Great Falls displays a wide variety of micro-climates. As a result, some of the data presented in this publication may not adequately represent the actual conditions at any given location.

Finally, users must view this data in the context of a dynamically evolving earth-atmosphere system. Climatic conditions are best represented on a time scale of millennia or longer. This publication in no way guarantees that the climate of Great Falls will remain comparable to that observed during the last century.

1.1 GEOGRAPHY AND PHYSIOGRAPHY

Great Falls, Montana is a small metropolitan area (population 55,000) located in the high plains of central Montana (Figure 1). The city is situated along the main stem of the Missouri River, at its confluence with the Sun River, at an elevation of 3600 feet above mean sea level (msl).

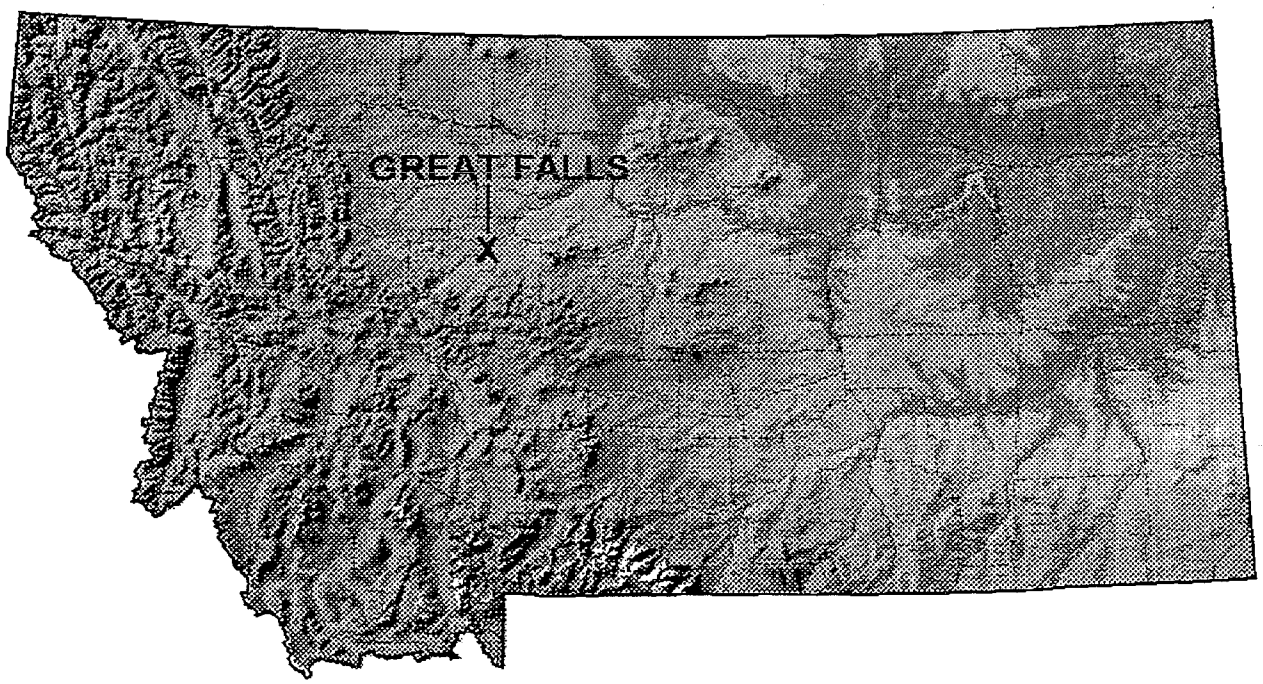

Figure 1 Topographic relief map of Montana showing location of Great Falls.

The National Weather Service Forecast Office (NWSFO) is located near the International Airport on a nearby plateau between the Sun and Missouri Rivers and about 2 miles southwest of their confluence. This plateau is about 200 feet higher than the immediate surrounding area. Nearby mountain ranges partially encircle this portion of the Missouri River valley. These include the Highwood and Little Belt Mountains, which are about 30 miles away to the east and south, respectively. The Big Belt Mountains are 40 miles distant to the southwest and the Front Range of the Rocky Mountains varies between 60 and 100 miles distance to the west and northwest.

Topography plays a major role in Great Falls' climate. The Continental Divide, along with the Big and Little Belt Mountains, plays a large role in the formation of the chinook winds which frequently occur during the fall and winter. This topography also contributes to upslope precipitation events during arctic outbreaks. The elevation difference between the city and NWSFO also influences temperature differences at these two points. This difference is especially noticeable when chinook winds warm the area surrounding the airport while the city is still experiencing bitter arctic cold.

1.2 SITE HISTORY

Native Americans inhabited the Great Falls area for at least 10,000 years prior to European assimilation. The area was first explored by whites in July of 1805 when members of the Lewis and Clark expedition viewed the Great Falls of the Missouri River and Black Eagle Falls. The explorers spent approximately three weeks in the area and recorded in their journals majestic descriptions of the falls and surrounding area which would eventually fuel interest in settlement.

The area remained essentially unchanged for the next 75 years, with only occasional incursions by trappers, hunters and gold seekers. In 1884, Paris Gibson founded the city of Great Falls at the confluence of the Sun and Missouri Rivers and the city was incorporated in 1888 (Yuill, 1984).

Cooperative weather observations began at Great Falls on January 1, 1892 from a location at the end of Central Avenue across Park Drive. Observations were collected by C. L. Herzog until June 30, 1898. Robert Deardorf continued data collection at this site between July 1, 1898 and May 31, 1901.

The weather observation site was moved to the roof of the Minot Building at the corner of Central Avenue and 2nd Street on July 1, 1901. Observations were taken by S. H. Bauman at the same location between June 1, 1901 and July 4, 1913.

On July 5, 1913, the observation location was moved onto the grounds of the United States Post Office at 1st Avenue North, between 2nd and 3rd Streets. Mr. Bauman continued collecting observations at this location until August 16, 1914.

Observations were next moved three blocks north to the residence of George Raban at 423 4th Avenue North and

continued at this site until March 31, 1918. Between April 1, 1918 and September 30, 1919 the observation site was located one mile east at 1709 3rd Avenue North.

Cooperative observations were assumed by the Great Falls Fire Department at 412 13th Street North on October 1, 1919 and continued at this location until March 31, 1937. The United States Weather Bureau office at the Municipal Airport on Gore Hill assumed responsibility for the collection of weather data on April 1, 1937 and has maintained the records until the present day.

In June, 1994 the Weather Service Forecast Office moved from the International Airport to it's present location on Tri-Hill Frontage Road, about 2 miles to the west-southwest. At that time, ASOS (Automatic Surface Observing System) became operational at the airport and is now the primary weather data collection system.

2.0 CHARACTERISTICS OF GREAT FALLS CLIMATE

The climate in Great Falls is generally characterized by pleasant summers with warm, mostly sunny days and cool nights. Summer rainfall usually falls in the form of showers or thundershowers, but prolonged stratiform rain events do occur during late spring and early summer.

Although Great Falls' average annual precipitation would normally classify the area as semiarid, it should be noted that about 70 percent of the annual total normally falls during the April - September growing season. Favorable temperatures during the peak of the growing season combined with long hours of summer sunshine and nearly 10 inches of precipitation during the critical months make the climate very favorable for dryland farming.

During summer months of historical record, freezing temperatures have not occurred in July and are very rare during June and August. The transition months of May and September will normally have two or three days of freezing temperatures, while frost occurs frequently during April and October.

Winters are warmer than would be expected, as a result of the frequent chinook winds. Sub-zero weather normally occurs several times during a winter. However, the duration of a typical cold spell ranges from only several days to a week after which it can be abruptly terminated by southwesterly chinook winds. The sudden warming associated with these chinooks can produce temperature rises of nearly 40 degrees in less than a day. Conversely, strong intrusions of bitterly cold arctic air sweep down from northern Canada several times each winter bringing sharp temperature drops of 30 to 40 degrees within 24 hours.

Precipitation generally falls as snow during the winter, late fall and early spring. Rain intermittently occurs during these periods as well, although freezing rain is very rare. Summer, late spring and early fall precipitation is usually in liquid form, although snow has been known to fall as early as mid August. Hail is occasionally observed in late spring

and early summer thunderstorms and is generally smaller than one quarter inch in diameter.

2.1 TEMPERATURE

The average annual temperature based upon the full historical data set is 45.3 degrees Fahrenheit (°F). This is 0.5°F above the 30-year average annual temperature (1961-1990) of 44.8°F. The maximum annual temperature of 49.6°F was recorded in 1934 and the minimum of 40.4°F was recorded in 1951.

Using historical data, the average daily high temperature is 57.1°F and the average daily low is 33.5°F. These averages are 0.7°F and 0.4°F warmer than the 30-year average maximum and minimum temperatures of 56.4°F and 33.1°F, respectively. The highest temperature recorded in Great Falls was 107°F on July 25, 1933. The extreme minimum of -49°F was recorded on February 15, 1936.

A 10-year (decadal) running average of annual temperatures reveals a general decline in temperatures beginning in the early years of this century and continuing until the late 1920's (page 15). This trend is followed by increasing decadal temperatures which top out in the early 1940's then decline until the late 1950's. A brief climb in decadal temperatures occurs during the 1960's before another drop in the early 1970's. Decadal temperatures remained somewhat constant through most of the 1970's and 1980's before a sharp increase occurs just prior to 1990.

2.2 PRECIPITATION

The average annual precipitation at Great Falls, as based upon the entire historical database, is 14.98 inches. The thirty-year (1961-1990) annual average is 15.21 inches, a difference of 0.23 inches. Yearly extremes in precipitation range from a maximum of 25.24 inches in 1975 to a minimum of 6.68 inches in 1904.

Thirty-year averaged monthly precipitation amounts vary from a maximum of 2.52 inches for the month of May to a minimum of 0.57 inches which occurs in February. May, 1953 is the wettest month on record with 8.13 inches. At the other extreme, November, 1917 is distinguished as the only month during the last 103 years that did not receive at least a trace of precipitation.

Decadal averages show a steady increase in precipitation totals during the early years of this century (page 57). This trend is followed by a steady decline which begins in the early teens and continues until reaching a minimum about 1940. Another steady rise in decadal precipitation continues until the mid 1950's followed by a sharp decrease which bottoms at around 1960. Decadal precipitation averages have been slowly rising over the last 30 to 35 years with the exception of a short lived increase in the late 1970's followed by a sharp but short decrease in the early 1980's.

Ten and thirty year running averages of annual mean temperatures and precipitation are presented on pages 58 and 59. In these figures there appears to be a correlation between temperature increases and precipitation decreases.

This apparent correlation is most notable during the dust bowl years of the 1930's.

2.2.1 SNOWFALL

The thirty-year average annual snowfall at Great Falls is 62.8 inches. This is considerably more than the average annual snowfall of historical record, 52.3 inches. The maximum seasonal snowfall of 117.5 inches occurred in the winter of 1988-1989. The minimum seasonal snowfall, 17.9 inches, was recorded during the winter of 1904-1905.

Decadal averages of snowfall are nearly steady for the period beginning about 1910 and continuing until the mid 1930's (page 119). A slight drop during the mid to late 1930's is followed by a substantial increase in snowfall totals from the early 1940's until the mid 1950's. Another sharp drop in decadal averages occurs during the late 1950's with averages again increasing in the late 1960's. Much greater variability is observed over the last 30 years than at any other time in the historical record. However, the overall trend in decadal snowfall averages appear more or less constant during this time frame.

It is possible that the dramatic increase in decadal snowfall averages during the 1940's may be related to the relocation of the official observation site to the airport in 1937. However, unofficial present day comparisons of snowfall amounts between downtown Great Falls and the airport do not indicate quite so large a discrepancy as has been noted in this study.

2.3 WINDS

Recorded wind data is sparse at Great Falls. This is especially unfortunate in that wind direction has a profound impact on temperatures and precipitation in the area, especially during the winter months. While the prevailing winds at Great Falls are from the southwest to west-southwest, occasional north to northeasterly winds during the late winter and early spring contribute to significant upslope precipitation events (pages 134 & 135). The greatest variability in wind direction in the Great Falls area results from thunderstorm outflow winds, primarily during spring and summer afternoons (pages 137 & 140).

The average wind speed recorded at Great Falls between 1951 and 1995 is 12.3 miles per hour (mph). Winds averaged on a monthly basis are at a maximum (15.2 mph) during December and are lowest (9.7 mph) in July. The highest wind speed recorded at Great Falls was 40.0 mph on January 29, 1974.

Daily peak wind gusts recorded between 1970-1995 average out to 28.8 mph. Monthly averaged peak wind gusts top out at 31.6 mph in December and are at a minimum of 27.6 mph in August. The peak wind gust recorded at the Great Falls International Airport was 82 mph on November 4, 1978.

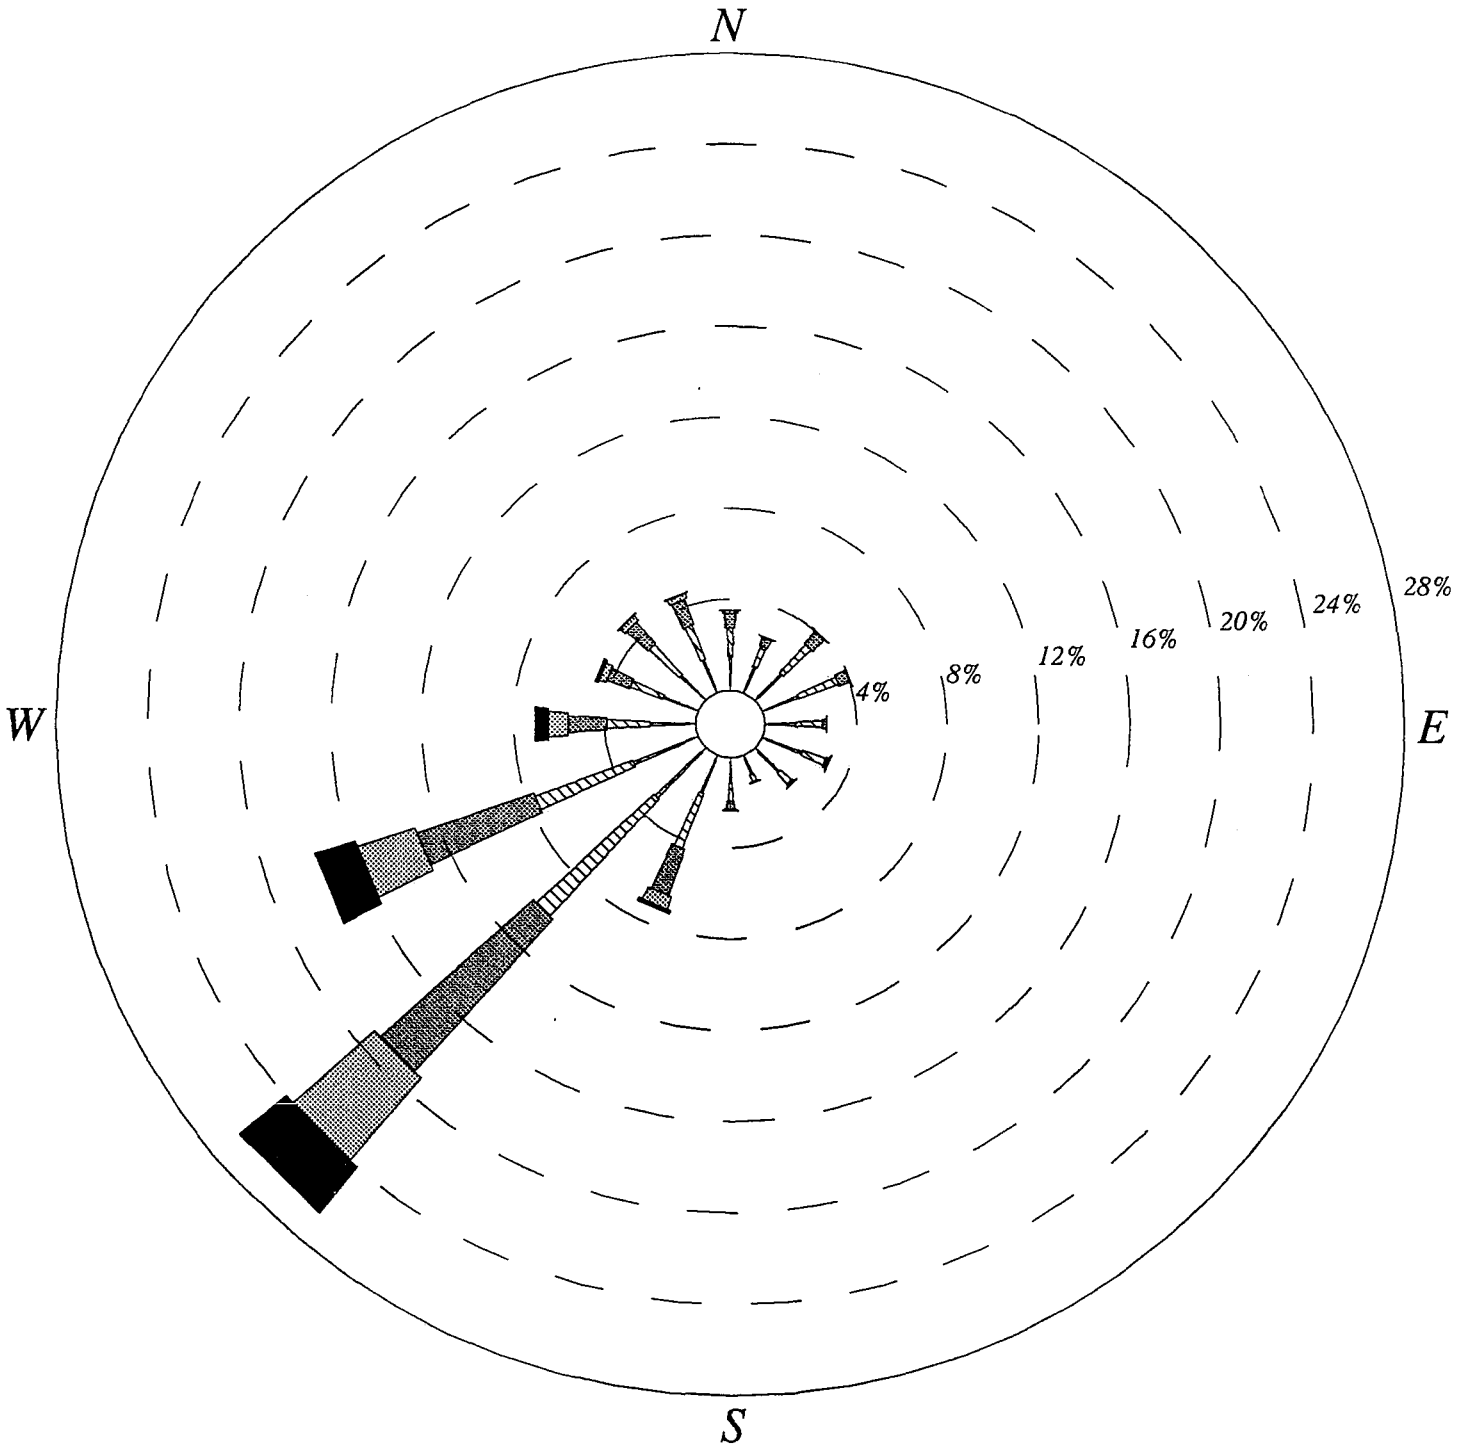
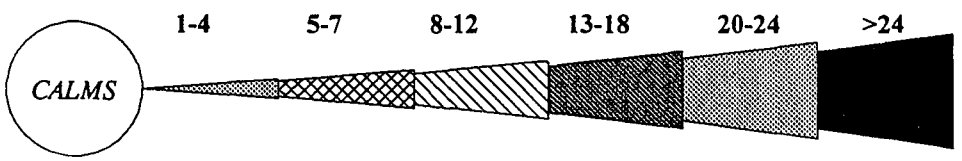
WIND DATA

MEAN WIND DIRECTION AND SPEED
ANNUAL



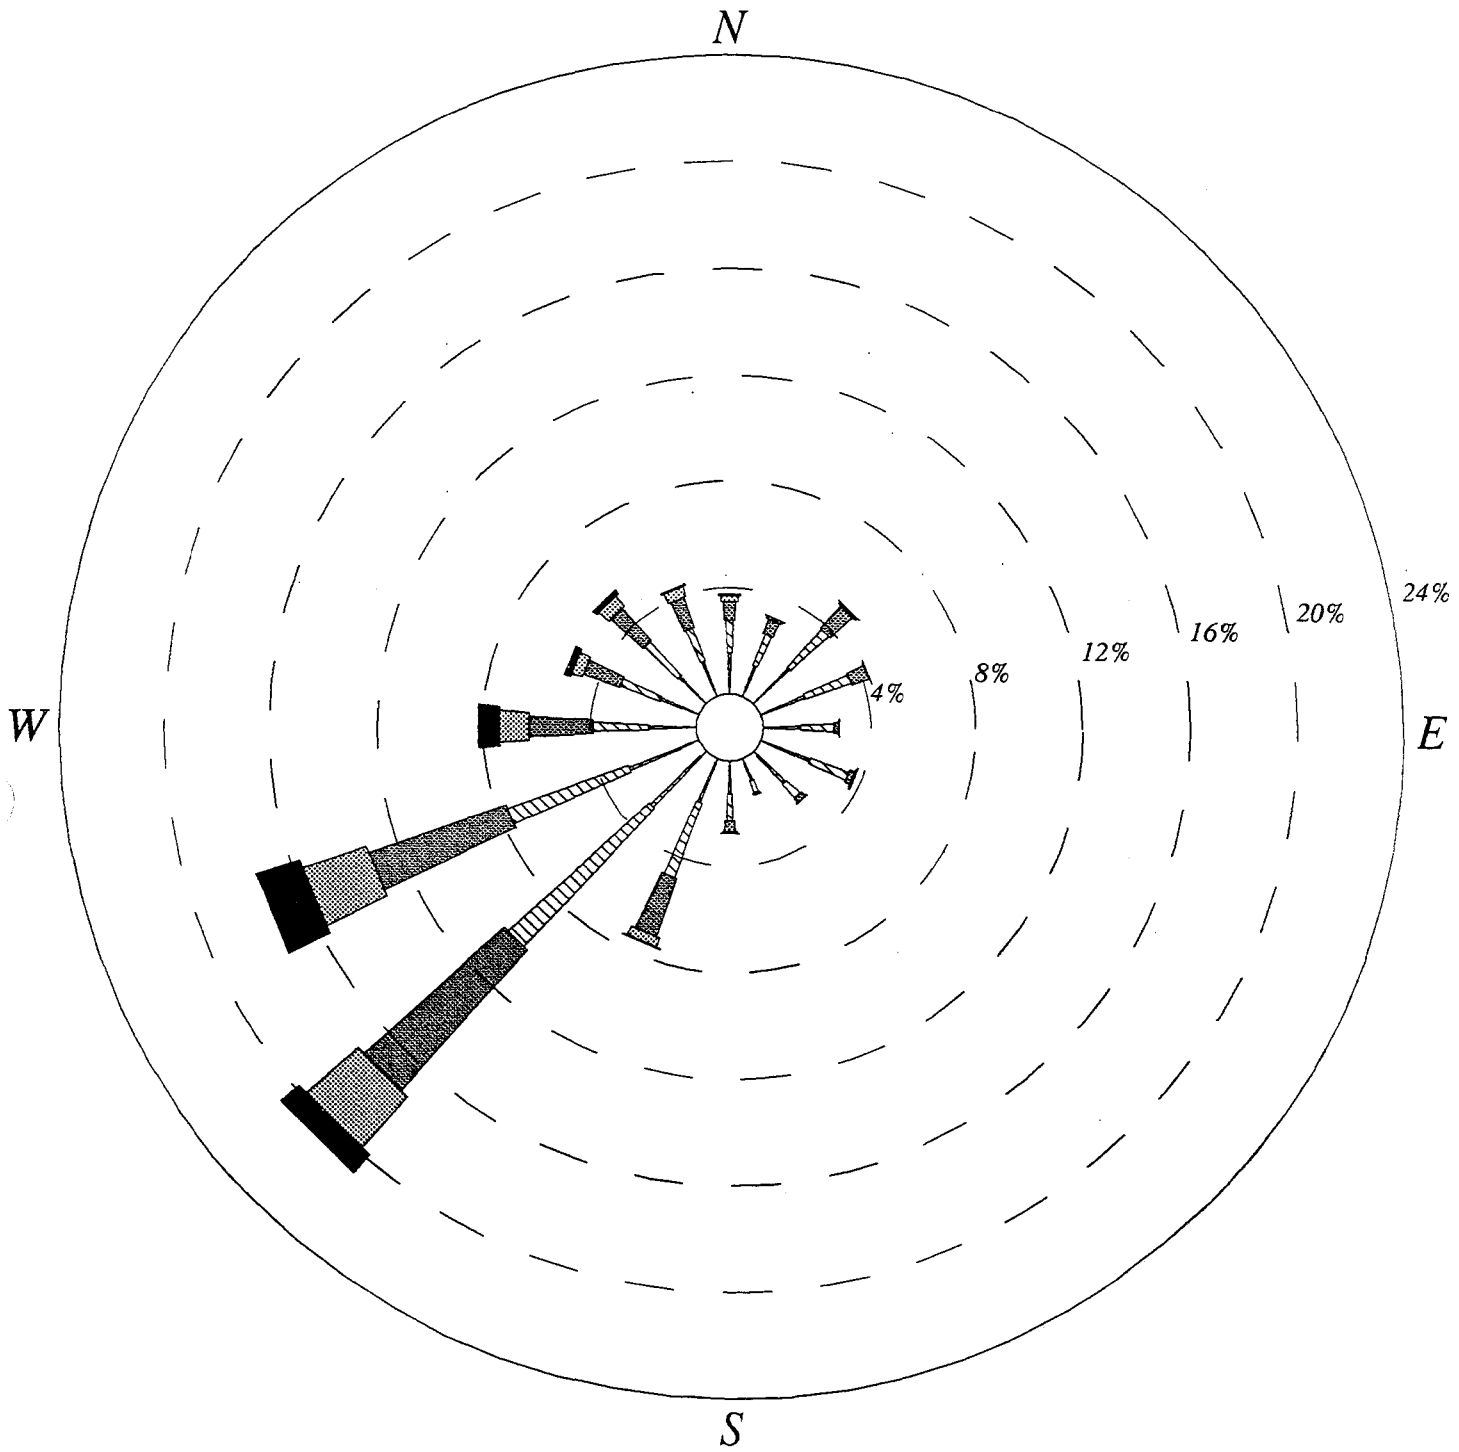
CALM WINDS 1.24%

WIND SPEED (MPH)



NOTE: Frequencies indicate direction from which the wind is blowing.

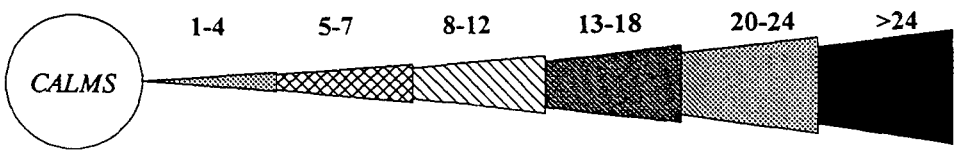
MEAN WIND DIRECTION AND SPEED
SPRING



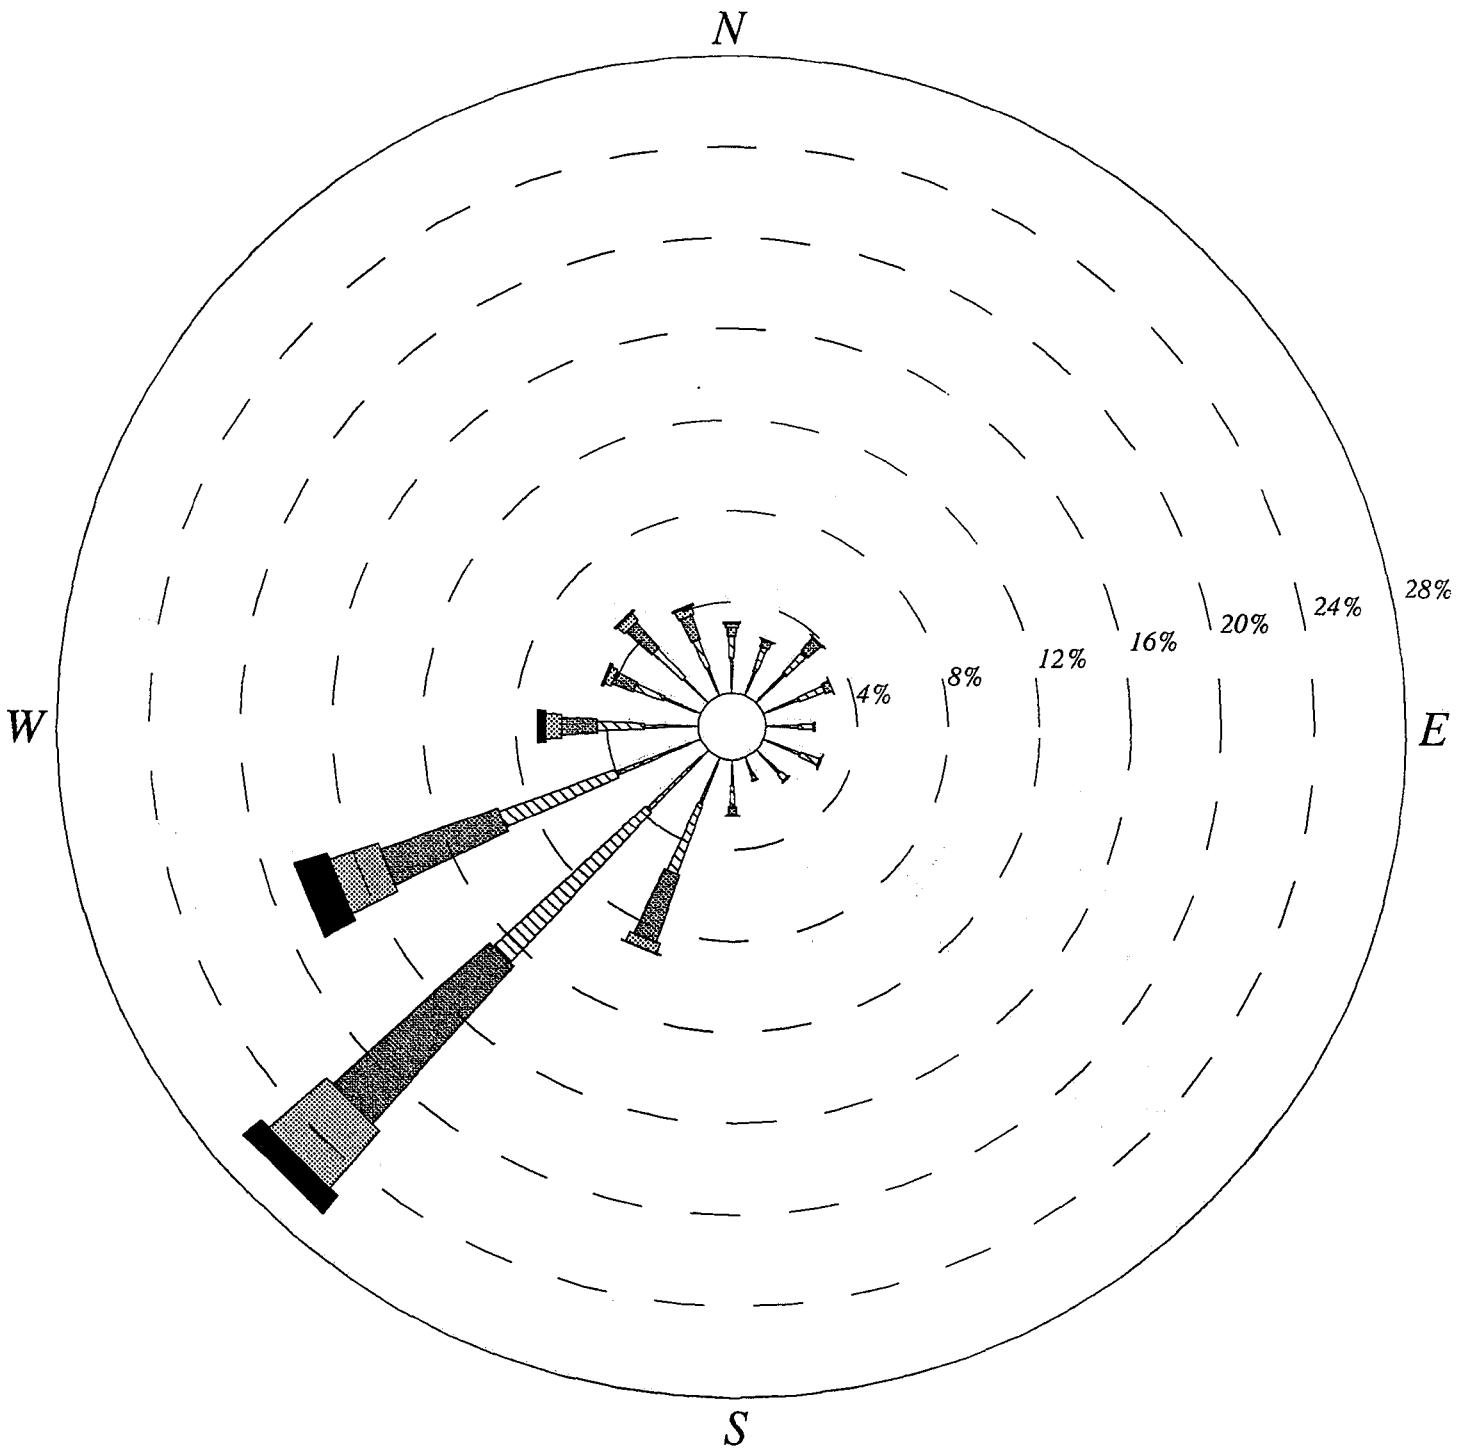
CALM WINDS 1.31%

WIND SPEED (MPH)

NOTE: Frequencies indicate direction from which the wind is blowing.



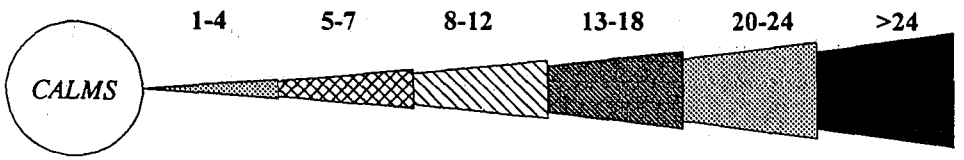
MEAN WIND DIRECTION AND SPEED
SPRING MORNING



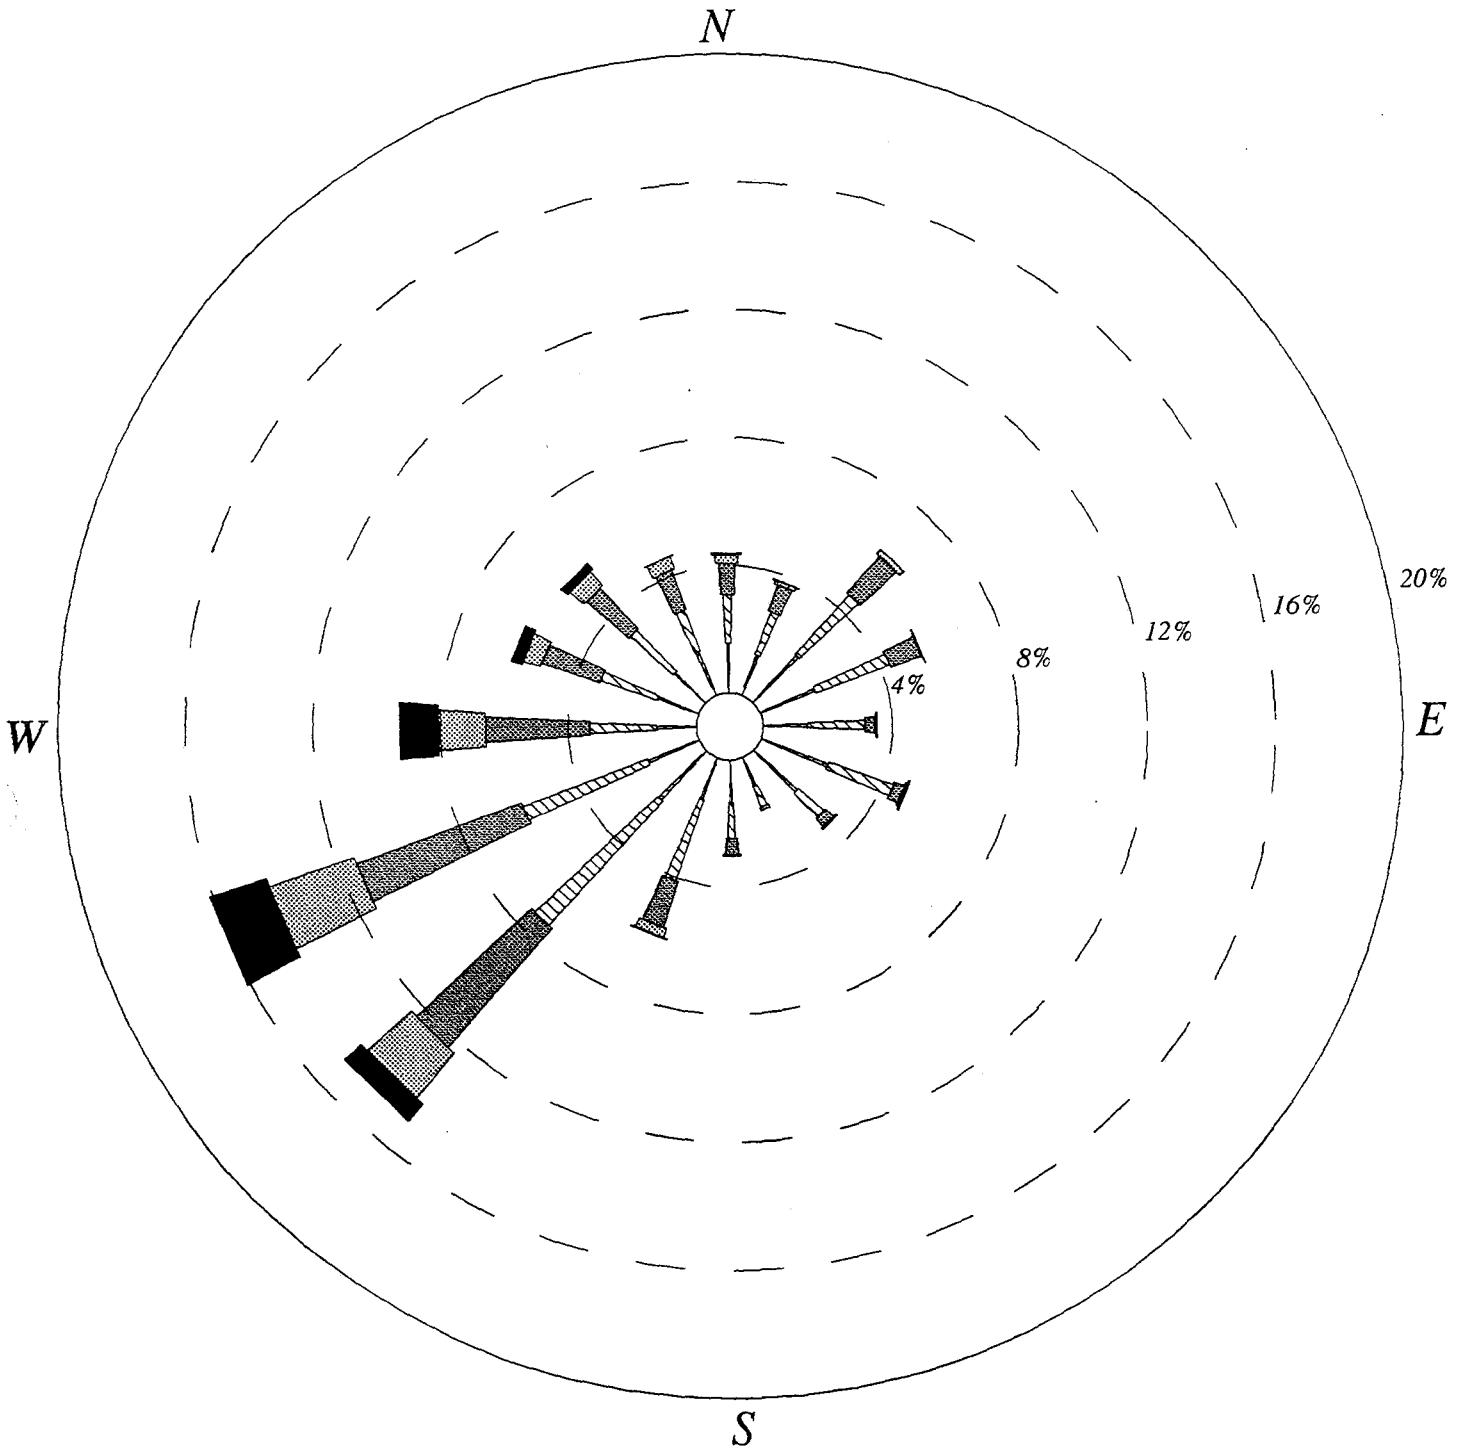
CALM WINDS 1.63%

WIND SPEED (MPH)

NOTE: Frequencies indicate direction from which the wind is blowing.



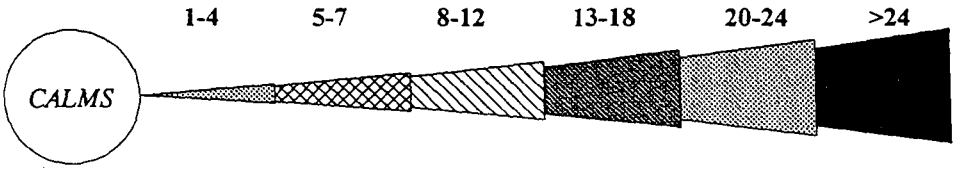
MEAN WIND DIRECTION AND SPEED
SPRING AFTERNOON



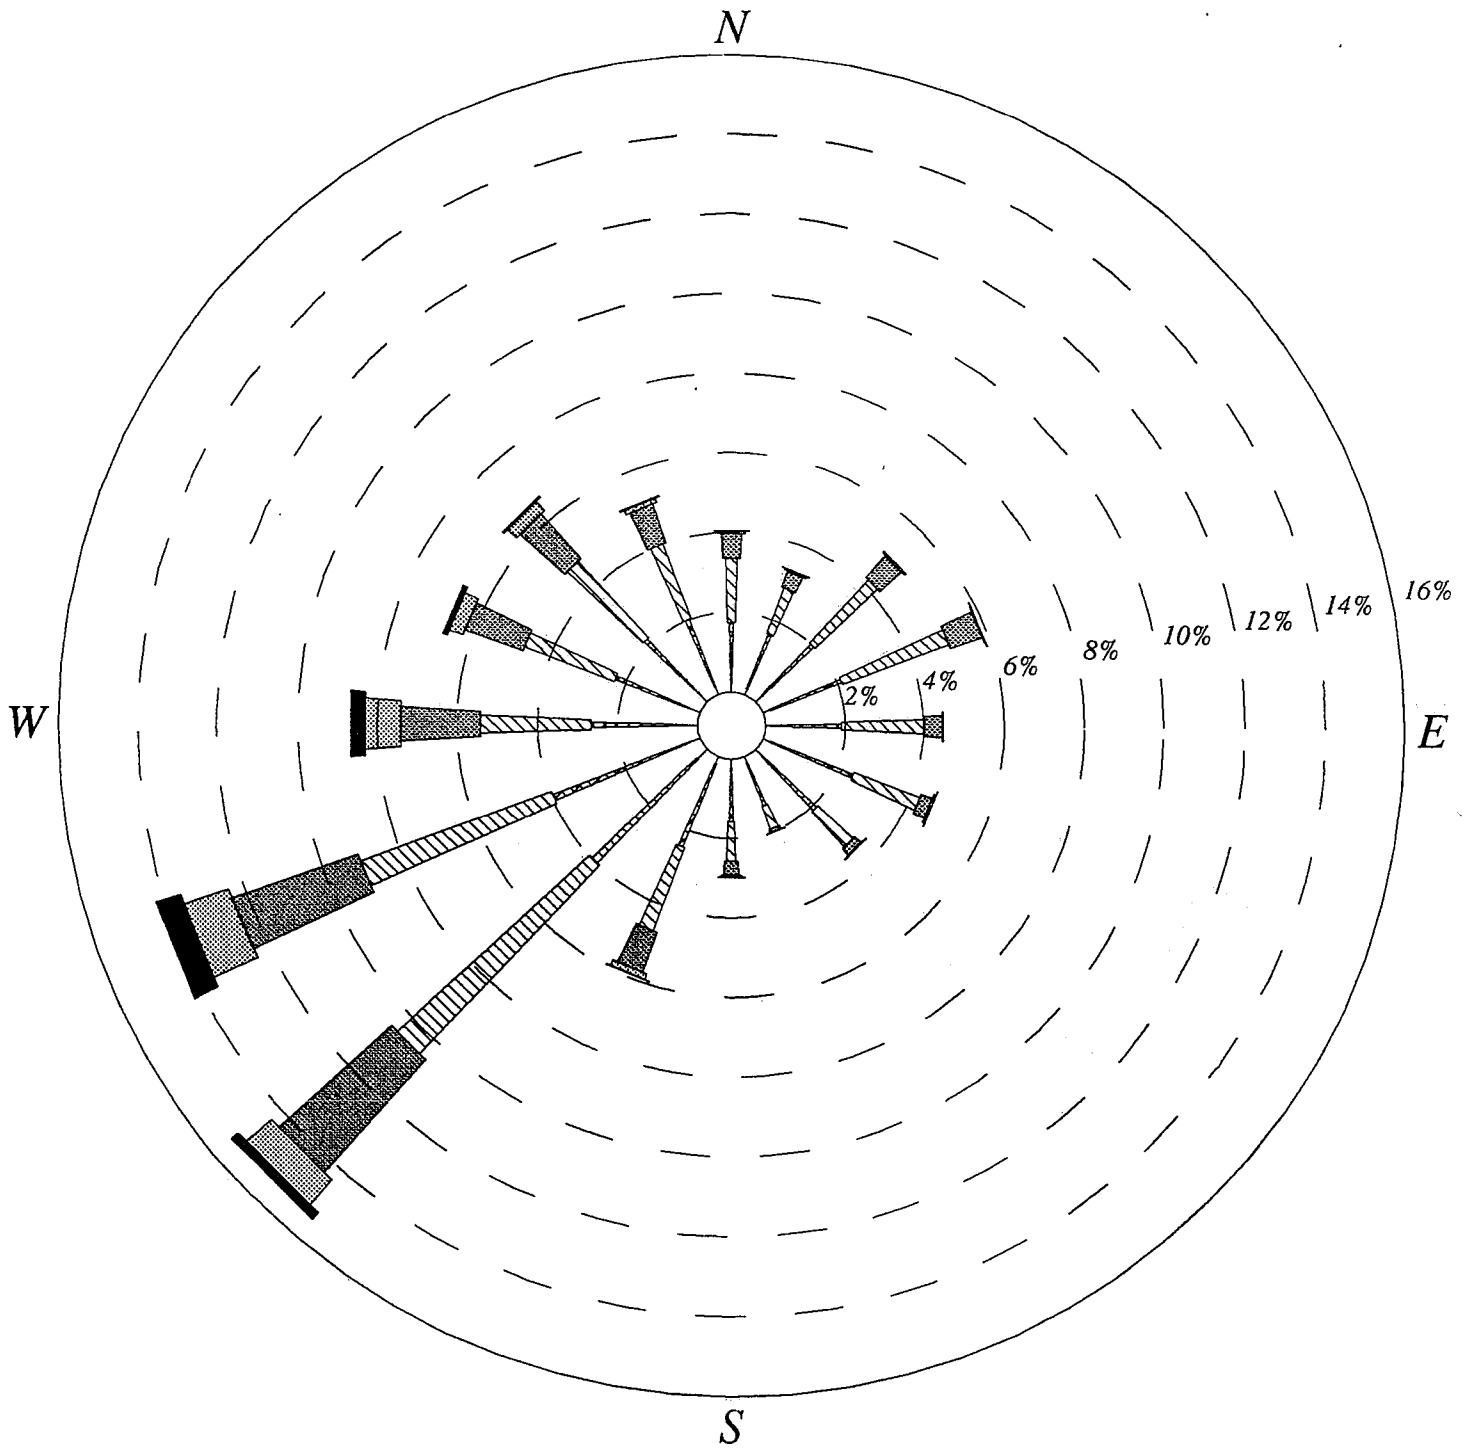
CALM WINDS 1.00%

NOTE: Frequencies indicate direction from which the wind is blowing.

WIND SPEED (MPH)



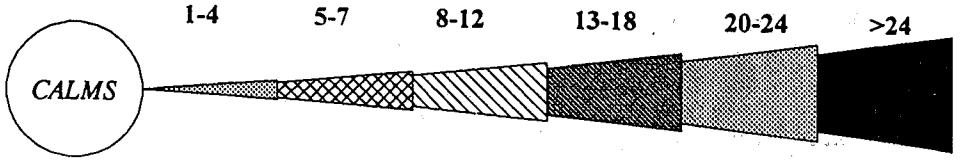
MEAN WIND DIRECTION AND SPEED
SUMMER



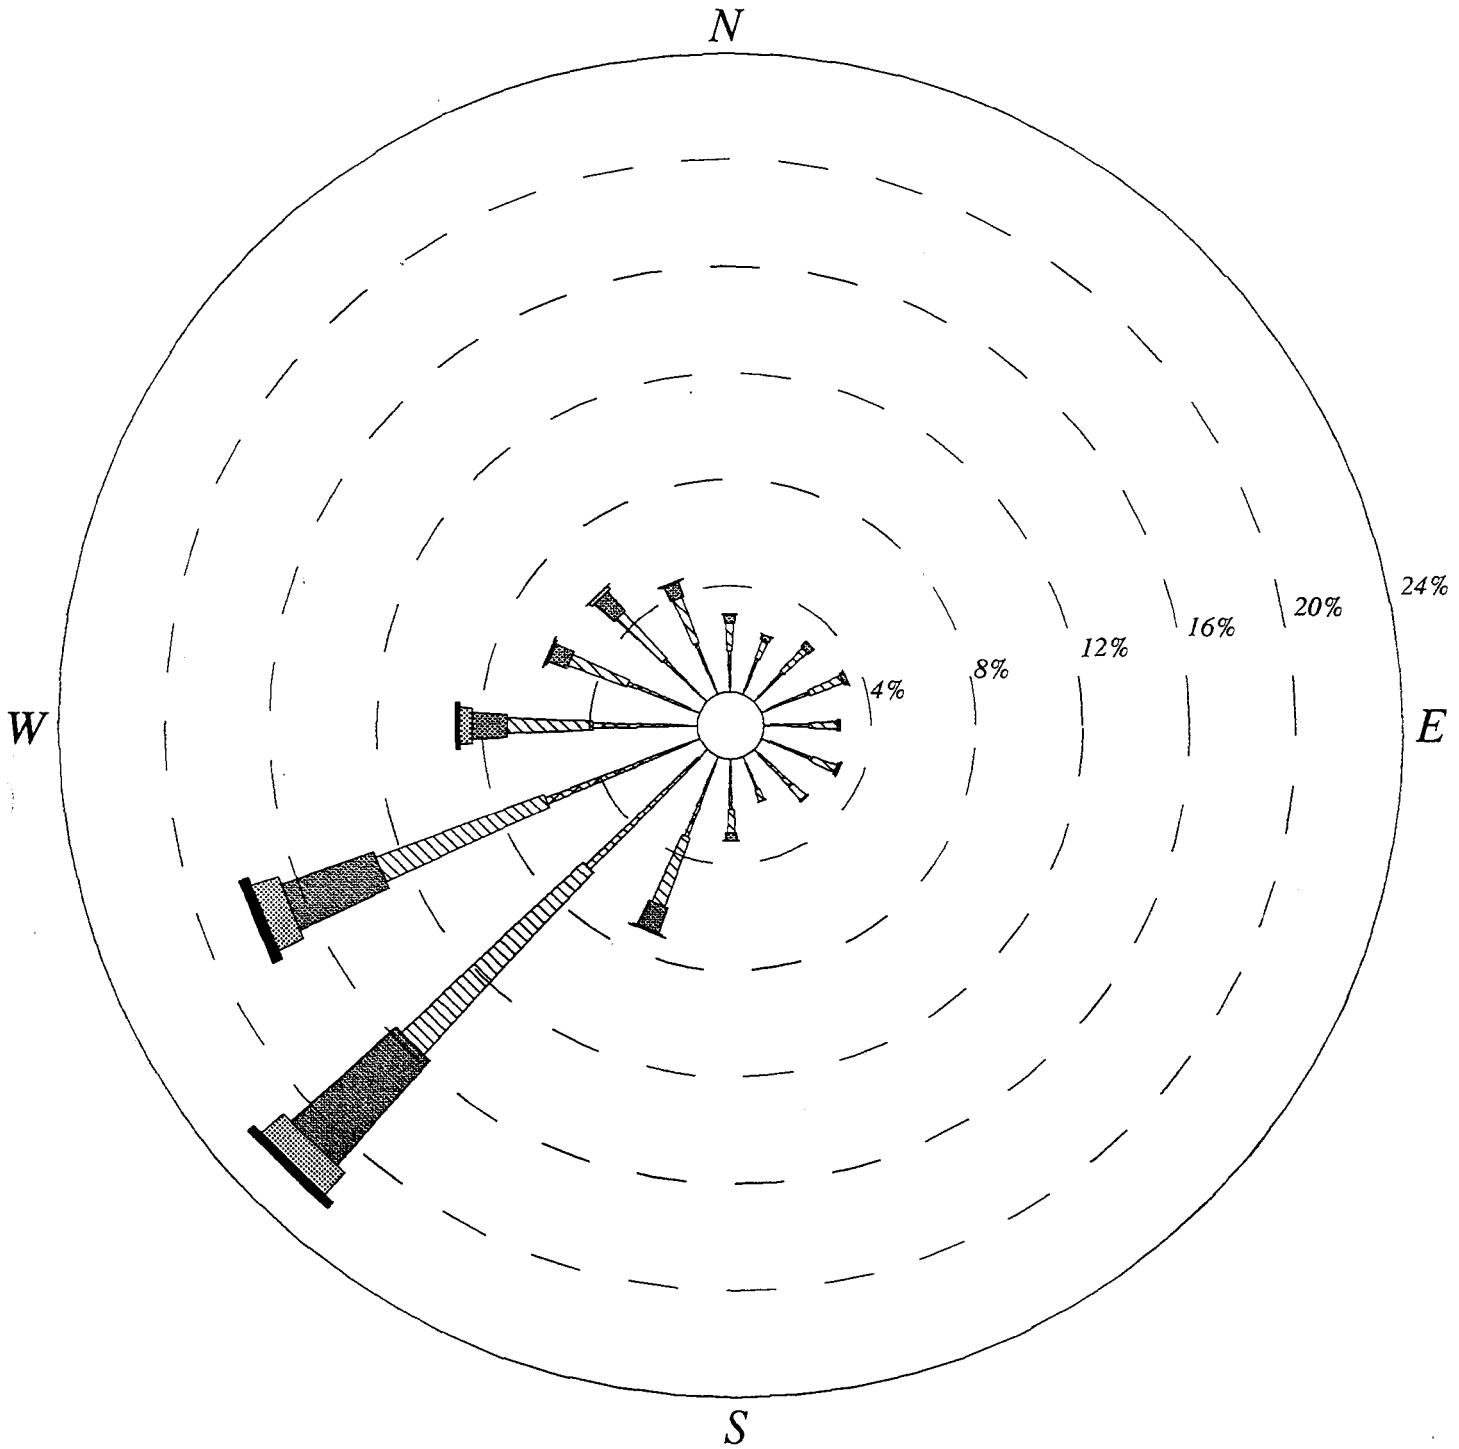
CALM WINDS 1.14%

NOTE: Frequencies indicate direction from which the wind is blowing.

WIND SPEED (MPH)

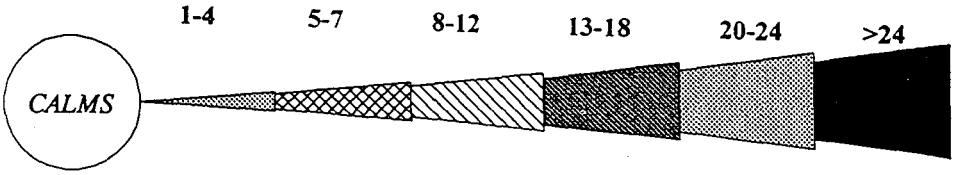


MEAN WIND DIRECTION AND SPEED
SUMMER MORNING



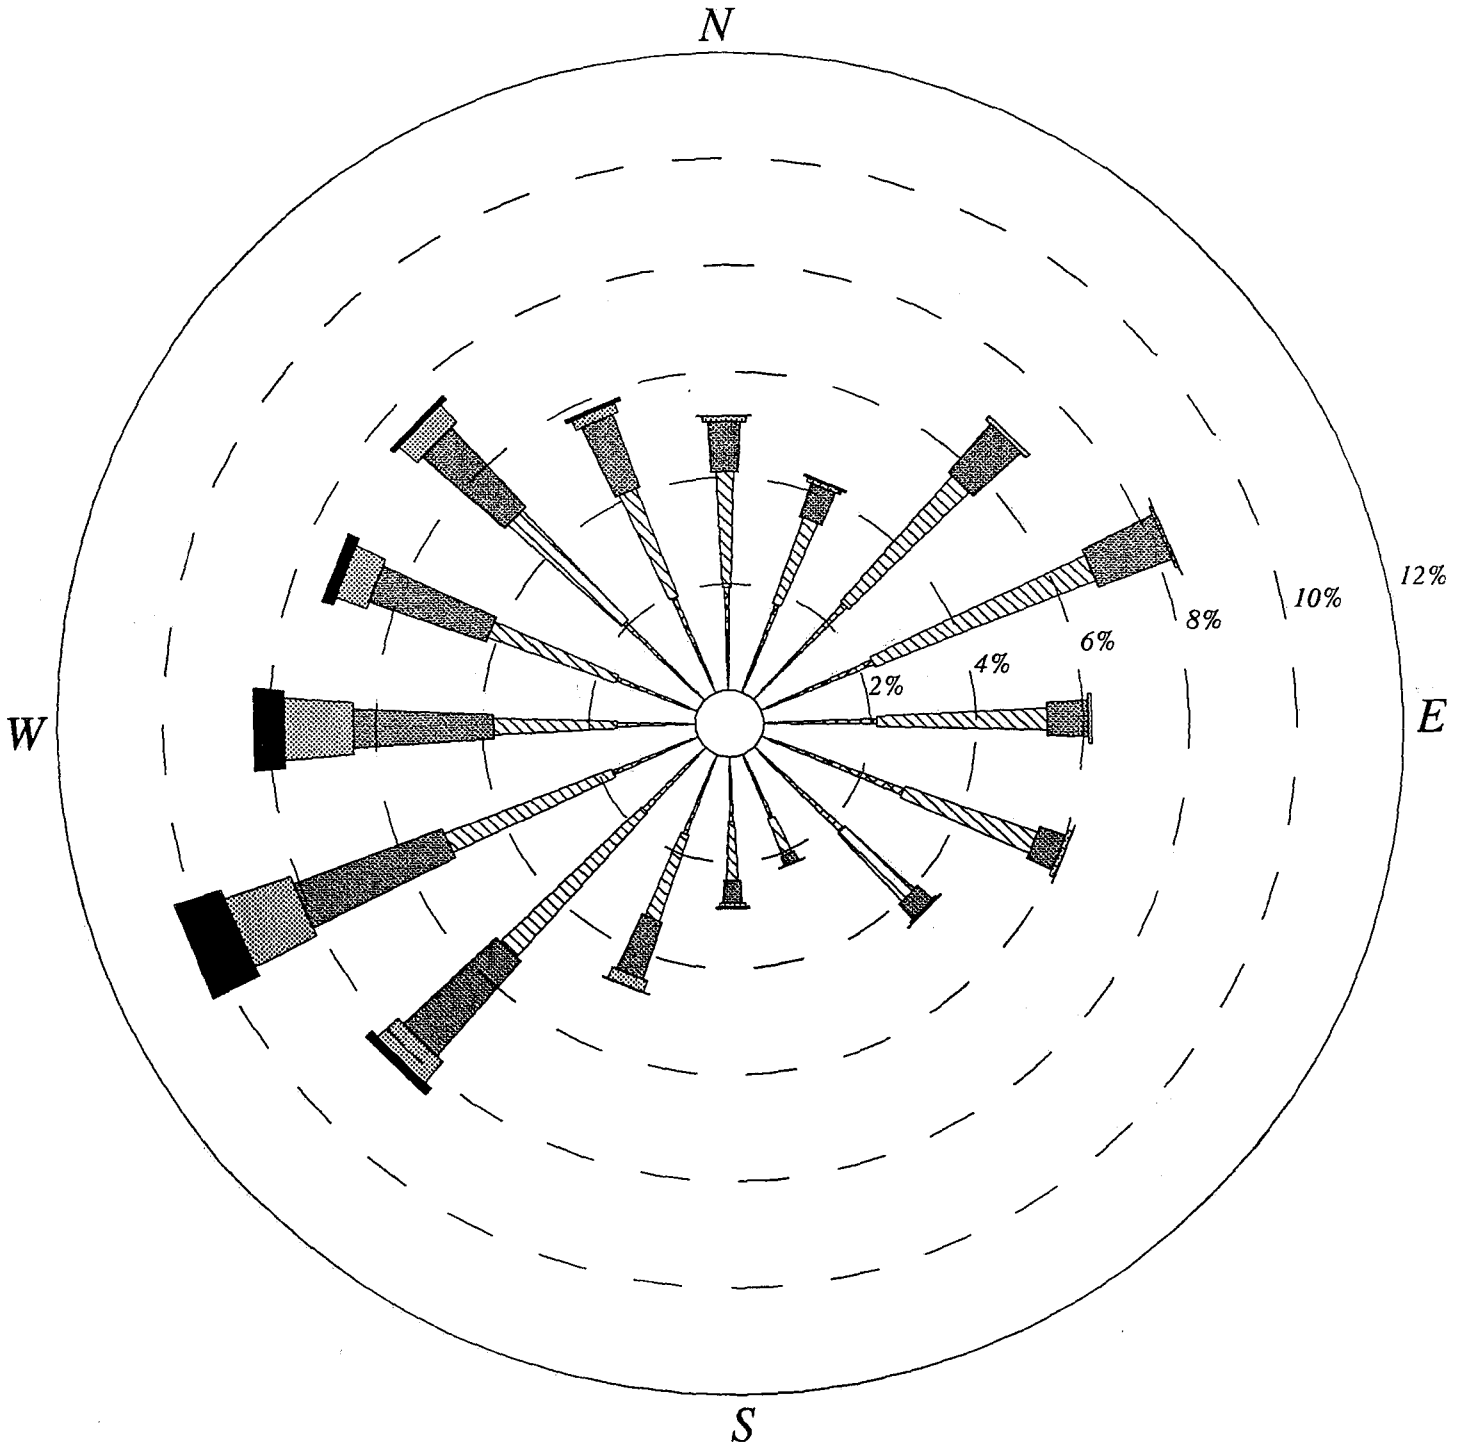
CALM WINDS 1.47%

WIND SPEED (MPH)



NOTE: Frequencies indicate direction from which the wind is blowing.

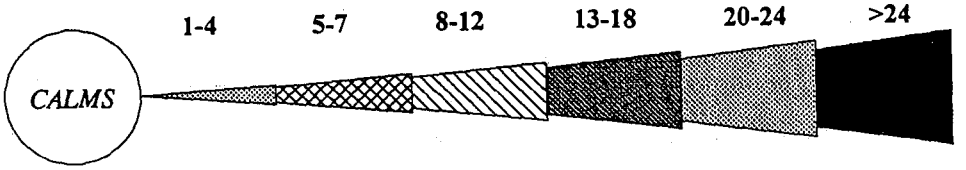
MEAN WIND DIRECTION AND SPEED
SUMMER AFTERNOON



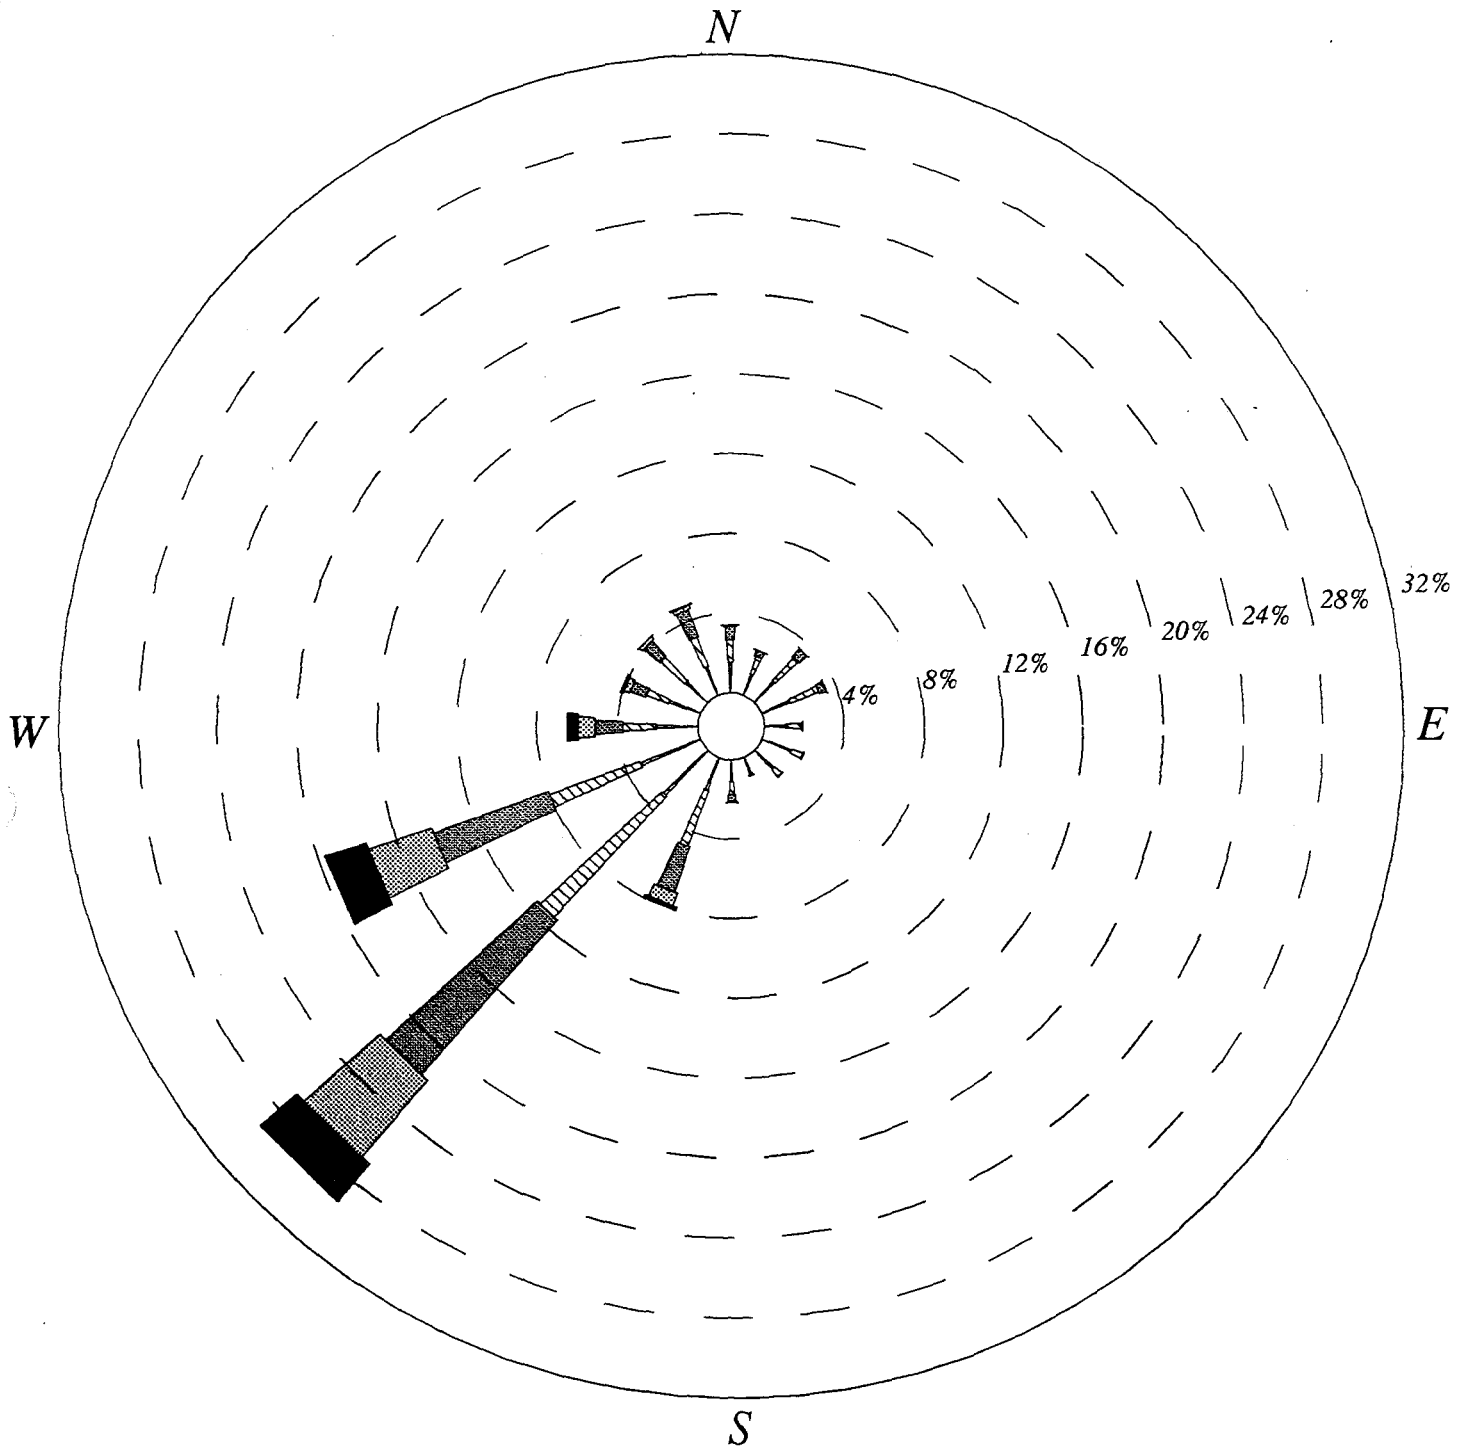
CALM WINDS 0.82%

NOTE: Frequencies indicate direction from which the wind is blowing.

WIND SPEED (MPH)

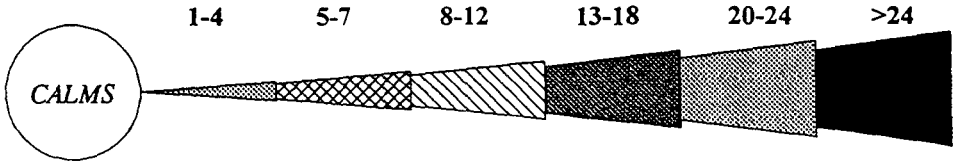


MEAN WIND DIRECTION AND SPEED
FALL



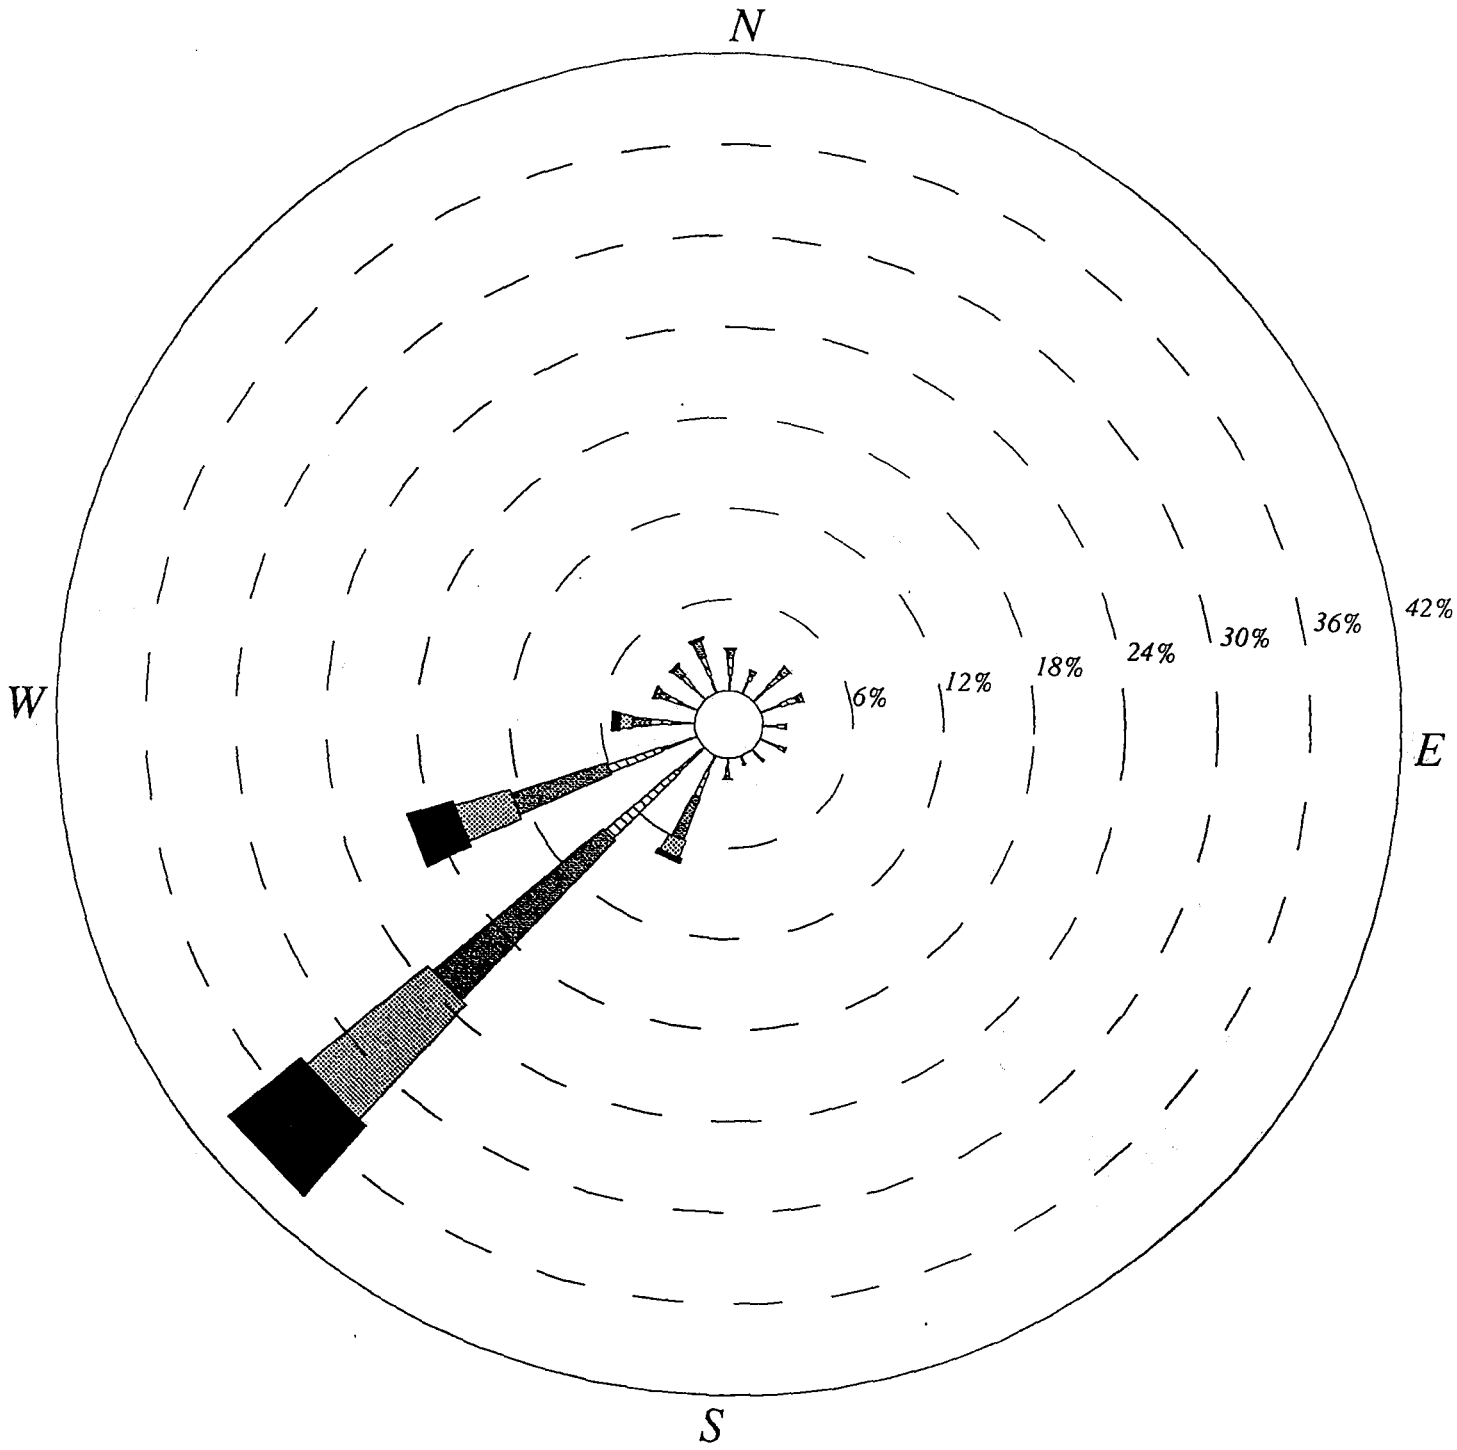
CALM WINDS 1.27%

WIND SPEED (MPH)



NOTE: Frequencies indicate direction from which the wind is blowing.

MEAN WIND DIRECTION AND SPEED
WINTER



CALM WINDS 1.07%

WIND SPEED (MPH)

NOTE: Frequencies indicate direction from which the wind is blowing.

144 Arizona Cool Season Climatological Surface Wind and Pressure Gradient Study. Ira S. Brenner, May 1979. (PB298900/AS)
146 The BART Experiment. Morris S. Webb, October 1979. (PB80 155112)
147 Occurrence and Distribution of Flash Floods in the Western Region. Thomas L. Dietrich, December 1979. (PB80 160344)
149 Misinterpretations of Precipitation Probability Forecasts. Allan H. Murphy, Sarah Lichtenstein, Baruch Fischhoff, and Robert L. Winkler, February 1980. (PB80 174576)
150 Annual Data and Verification Tabulation - Eastern and Central North Pacific Tropical Storms and Hurricanes 1979. Emil B. Gunther and Staff, EPHC, April 1980. (PB80 220486)
NMC Model Performance in the Northeast Pacific. James E. Overland, PMEL-ERL, April 1980. (PB80 196033)
152 Climate of Salt Lake City, Utah. William J. Alder, Sean T. Buchanan, William Cope (Retired), James A. Cisco, Craig C. Schmidt, Alexander R. Smith (Retired), Wilbur E. Figgins (Retired), April 1996 - Sixth Revision (PB96 175583)
153 An Automatic Lightning Detection System in Northern California. James E. Rea and Chris E. Fontana, June 1980. (PB80 225592)
154 Regression Equation for the Peak Wind Gust 6 to 12 Hours in Advance at Great Falls During Strong Downslope Wind Storms. Michael J. Oard, July 1980. (PB91 108367)
155 A Raininess Index for the Arizona Monsoon. John H. Ten Harkel, July 1980. (PB81 106494)
156 The Effects of Terrain Distribution on Summer Thunderstorm Activity at Reno, Nevada. Christopher Dean Hill, July 1980. (PB81 102501)
157 An Operational Evaluation of the Scofield/Oliver Technique for Estimating Precipitation Rates from Satellite Imagery. Richard Ochoa, August 1980. (PB81 108227)
158 Hydrology Practicum. Thomas Dietrich, September 1980. (PB81 134033)
159 Tropical Cyclone Effects on California. Arnold Court, October 1980. (PB81 133779)
160 Eastern North Pacific Tropical Cyclone Occurrences During Intraseasonal Periods. Preston W. Leftwich and Gail M. Brown, February 1981. (PB81 205494)
161 Solar Radiation as a Sole Source of Energy for Photovoltaics in Las Vegas, Nevada, for July and December. Darryl Randerson, April 1981. (PB81 224503)
162 A Systems Approach to Real-Time Runoff Analysis with a Deterministic Rainfall-Runoff Model. Robert J.C. Burnash and R. Larry Ferral, April 1981. (PB81 224495)
163 A Comparison of Two Methods for Forecasting Thunderstorms at Luke Air Force Base, Arizona. LTC Keith R. Cooley, April 1981. (PB81 225393)
164 An Objective Aid for Forecasting Afternoon Relative Humidity Along the Washington Cascade East Slopes. Robert S. Robinson, April 1981. (PB81 23078)
165 Annual Data and Verification Tabulation, Eastern North Pacific Tropical Storms and Hurricanes 1980. Emil B. Gunther and Staff, May 1981. (PB82 230336)
166 Preliminary Estimates of Wind Power Potential at the Nevada Test Site. Howard G. Booth, June 1981. (PB82 127036)
167 ARAP User's Guide. Mark Mathewson, July 1981, Revised September 1981. (PB82 196783)
168 Forecasting the Onset of Coastal Gales Off Washington-Oregon. John R. Zimmerman and William D. Burton, August 1981. (PB82 127051)
169 A Statistical-Dynamical Model for Prediction of Tropical Cyclone Motion in the Eastern North Pacific Ocean. Preston W. Leftwich, Jr., October 1981. (PB82195298)
170 An Enhanced Plotter for Surface Airways Observations. Andrew J. Spry and Jeffrey L. Anderson, October 1981. (PB82 153883)
171 Verification of 72-Hour 500-MB Map-Type Predictions. R.F. Quiring, November 1981. (PB82-158098)
172 Forecasting Heavy Snow at Wenatchee, Washington. James W. Holcomb, December 1981. (PB82-177783)
173 Central San Joaquin Valley Type Maps. Thomas R. Crossan, December 1981. (PB82 196064)
174 ARAP Test Results. Mark A. Mathewson, December 1981. (PB82 198103)
176 Approximations to the Peak Surface Wind Gusts from Desert Thunderstorms. Darryl Randerson, June 1982. (PB82 253089)
Climate of Phoenix, Arizona. Robert J. Schmidli and Austin Jamison, April 1969 (Revised July 1996). (PB96-191614)
178 Annual Data and Verification Tabulation, Eastern North Pacific Tropical Storms and Hurricanes 1982. E.B. Gunther, June 1983. (PB85 106078)
179 Stratified Maximum Temperature Relationships Between Sixteen Zone Stations in Arizona and Respective Key Stations. Ira S. Brenner, June 1983. (PB83 249904)
180 Standard Hydrologic Exchange Format (SHEF) Version I. Phillip A. Pasteris, Vernon C. Bissel, David G. Bennett, August 1983. (PB85 106052)
181 Quantitative and Spacial Distribution of Winter Precipitation along Utah's Wasatch Front. Lawrence B. Dunn, August 1983. (PB85 106912)
182 500 Millibar Sign Frequency Teleconnection Charts - Winter. Lawrence B. Dunn, December 1983. (PB85 106276)
183 500 Millibar Sign Frequency Teleconnection Charts - Spring. Lawrence B. Dunn, January 1984. (PB85 111367)
184 Collection and Use of Lightning Strike Data in the Western U.S. During Summer 1983. Glenn Rasch and Mark Mathewson, February 1984. (PB85 110534)
185 500 Millibar Sign Frequency Teleconnection Charts - Summer. Lawrence B. Dunn, March 1984. (PB85 111359)
186 Annual Data and Verification Tabulation eastern North Pacific Tropical Storms and Hurricanes 1983. E.B. Gunther, March 1984. (PB85 109635)
187 500 Millibar Sign Frequency Teleconnection Charts - Fall. Lawrence B. Dunn, May 1984. (PB85-110930)
188 The Use and Interpretation of Isentropic Analyses. Jeffrey L. Anderson, October 1984. (PB85-132694)
189 Annual Data & Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1984. E.B. Gunther and R.L. Cross, April 1985. (PB85 1878887AS)
190 Great Salt Lake Effect Snowfall: Some Notes and An Example. David M. Carpenter, October 1985. (PB86 119153/AS)
191 Large Scale Patterns Associated with Major Freeze Episodes in the Agricultural Southwest. Ronald S. Hamilton and Glenn R. Lussky, December 1985. (PB86 144474AS)
192 NWR Voice Synthesis Project: Phase I. Glen W. Sampson, January 1986. (PB86 145604/AS)
193 The MCC - An Overview and Case Study on Its Impact in the Western United States. Glenn R. Lussky, March 1986. (PB86 170651/AS)
194 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1985. E.B. Gunther and R.L. Cross, March 1986. (PB86 170941/AS)
195 Radid Interpretation Guidelines. Roger G. Pappas, March 1986. (PB86 177680/AS)
196 A Mesoscale Convective Complex Type Storm over the Desert Southwest. Darryl Randerson, April 1986. (PB86 190998/AS)
197 The Effects of Eastern North Pacific Tropical Cyclones on the Southwestern United States. Walter Smith, August 1986. (PB87 106258AS)
198 Preliminary Lightning Climatology Studies for Idaho. Christopher D. Hill, Carl J. Gorski, and Michael C. Conger, April 1987. (PB87 180196/AS)
Heavy Rains and Flooding in Montana: A Case for Slantwise Convection. Glenn R. Lussky, April 1987. (PB87 185229/AS)
Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1986. Roger L. Cross and Kenneth B. Mielke, September 1987. (PB88 110895/AS)
201 An Inexpensive Solution for the Mass Distribution of Satellite Images. Glen W. Sampson and George Clark, September 1987. (PB88 114038/AS)
202 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1987. Roger L. Cross and Kenneth B. Mielke, September 1988. (PB88-101935/AS)
203 An Investigation of the 24 September 1986 "Cold Sector" Tornado Outbreak in Northern California. John P. Monteverdi and Scott A. Braun, October 1988. (PB89 121297/AS)
204 Preliminary Analysis of Cloud-To-Ground Lightning in the Vicinity of the Nevada Test Site. Carven Scott, November 1988. (PB89 128649/AS)
205 Forecast Guidelines For Fire Weather and Forecasters -- How Nighttime Humidity Affects Wildland Fuels. David W. Goens, February 1989. (PB89 162549/AS)
206 A Collection of Papers Related to Heavy Precipitation Forecasting. Western Region Headquarters, Scientific Services Division, August 1989. (PB89 230833/AS)
207 The Las Vegas McCarran International Airport Microburst of August 8, 1989. Carven A. Scott, June 1990. (PB90-240268)
208 Meteorological Factors Contributing to the Canyon Creek Fire Blowup, September 6 and 7, 1988. David W. Goens, June 1990. (PB90-245085)
209 Stratus Surge Prediction Along the Central California Coast. Peter Felsch and Woodrow Whitlatch, December 1990. (PB91-129239)
210 Hydrotools. Tom Egger. January 1991. (PB91-151787/AS)
211 A Northern Utah Soaker. Mark E. Struthwolf, February 1991. (PB91-168716)
212 Preliminary Analysis of the San Francisco Rainfall Record: 1849-1990. Jan Null, May 1991. (PB91-208439)
213 Idaho Zone Preformat, Temperature Guidance, and Verification. Mark A. Mollner, July 1991. (PB91-227405/AS)
214 Emergency Operational Meteorological Considerations During an Accidental Release of Hazardous Chemicals. Peter Mueller and Jerry Galt, August 1991. (PB91-235424)
215 WeatherTools. Tom Egger, October 1991. (PB93-184950)
216 Creating MOS Equations for RAWS Stations Using Digital Model Data. Dennis D. Gettman, December 1991. (PB92-131473/AS)
217 Forecasting Heavy Snow Events in Missoula, Montana. Mike Richmond, May 1992. (PB92-196104)
218 NWS Winter Weather Workshop in Portland, Oregon. Various Authors, December 1992. (PB93-146785)
219 A Case Study of the Operational Usefulness of the Sharp Workstation in Forecasting a Mesocyclone-Induced Cold Sector Tornado Event in California. John P. Monteverdi, March 1993 (PB93-178697)
220 Climate of Pendleton, Oregon. Claudia Bell, August 1993. (PB93-227536)
221 Utilization of the Bulk Richardson Number, Helicity and Sounding Modification in the Assessment of the Severe Convective Storms of 3 August 1992. Eric C. Evenson, September 1993. (PB94-131943)
222 Convective and Rotational Parameters Associated with Three Tornado Episodes in Northern and Central California. John P. Monteverdi and John Quadros, September 1993. (PB94-131943)
223 Climate of San Luis Obispo, California. Gary Ryan, February 1994. (PB94-162062)
224 Climate of Wenatchee, Washington. Michael W. McFarland, Roger G. Buckman, and Gregory E. Matzen, March 1994. (PB94-164308)
225 Climate of Santa Barbara, California. Gary Ryan, December 1994. (PB95-173720)
226 Climate of Yakima, Washington. Greg DeVoir, David Hogan, and Jay Neher, December 1994. (PB95-173688)
227 Climate of Kalispell, Montana. Chris Maier, December 1994. (PB95-169488)
228 Forecasting Minimum Temperatures in the Santa Maria Agricultural District. Wilfred Pi and Peter Felsch, December 1994. (PB95-171088)
229 The 10 February 1994 Oroville Tornado--A Case Study. Mike Staudenmaier, Jr., April 1995. (PB95-241873)
230 Santa Ana Winds and the Fire Outbreak of Fall 1993. Ivory Small, June 1995. (PB95-241865)
231 Washington State Tornadoes. Tresté Huse, July 1995. (PB96-107024)
232 Fog Climatology at Spokane, Washington. Paul Frisbie, July 1995. (PB96-106604)
233 Storm Relative Isentropic Motion Associated with Cold Fronts in Northern Utah. Kevin B. Baker, Kathleen A. Hadley, and Lawrence B. Dunn, July 1995. (PB96-106596)
234 Some Climatological and Synoptic Aspects of Severe Weather Development in the Northwestern United States. Eric C. Evenson and Robert H. Johns, October 1995. (PB96-112958)
235 Climate of Las Vegas, Nevada. Paul H. Skrbac and Scott Cordero, December 1995. (PB96-135553)
236 Climate of Astoria, Oregon. Mark A. McInerney, January 1996.
237 The 6 July 1995 Severe Weather Events in the Northwestern United States: Recent Examples of SSWEs. Eric C. Evenson, April 1996.
238 Significant Weather Patterns Affecting West Central Montana. Joe Lester, May 1996. (PB96-178751)
239 Climate of Portland, Oregon. Clinton C. D. Rocky, May 1996. (PB96-17603)
240 Downslop Winds of Santa Barbara, CA. Gary Ryan, July 1996 (PB96-191697)
241 Operational Applications of the Real-time National Lightning Detection Network Data at the NWSO Tucson, AZ. Darren McCollum, David Bright, Jim Meyer, and John Glueck, September 1996 (PB97-108450)
242 Climate of Pocatello, Idaho. Joe Heim, October 1996. (PB97-114540)

NOAA SCIENTIFIC AND TECHNICAL PUBLICATIONS

The National Oceanic and Atmospheric Administration was established as part of the Department of Commerce on October 3, 1970. The mission responsibilities of NOAA are to assess the socioeconomic impact of natural and technological changes in the environment and to monitor and predict the state of the solid Earth, the oceans and their living resources, the atmosphere, and the space environment of the Earth.

The major components of NOAA regularly produce various types of scientific and technical information in the following kinds of publications.

PROFESSIONAL PAPERS–Important definitive research results, major techniques, and special investigations.

CONTRACT AND GRANT REPORTS–Reports prepared by contractors or grantees under NOAA sponsorship.

ATLAS--Presentation of analyzed data generally in the form of maps showing distribution of rainfall, chemical and physical conditions of oceans and atmosphere, distribution of fishes and marine mammals, ionospheric conditions, etc.

TECHNICAL SERVICE PUBLICATIONS -- Reports containing data, observations, instructions, etc. A partial listing includes data serials; prediction and outlook periodicals; technical manuals, training papers, planning reports, and information serials; and miscellaneous technical publications.

TECHNICAL REPORTS--Journal quality with extensive details, mathematical developments, or data listings.

TECHNICAL MEMORANDUMS--Reports of preliminary, partial, or negative research or technology results, interim instructions, and the like.

Information on availability of NOAA publications can be obtained from:
