NARRATIVE CLIMATOLOGICAL SUMMARY FOR ELKO, NEVADA

Elko, with a population of 18,297 as of the 2010 US Census, is located in southwestern Elko County in northeastern Nevada. It is located along the main east-west transportation corridor through the Great Basin, a massive area which includes most of Nevada and parts of California, Oregon, Idaho and Utah. All streams and rivers in this region flow into salt lakes or dry lake beds, from which no water leaves except through seepage and evaporation.

View of downtown Elko, Nevada. Photo by author.

On a more local scale, Elko is situated in the valley of the Humboldt River, one of the longest rivers in the Great Basin. Sitting at 5,074 feet above sea level, Elko Regional Airport serves as the official weather station for Elko and is located a mile southwest of downtown Elko. To the immediate southeast of Elko are the Elko Hills, a range of large hills and small mountains. This range reaches a peak elevation of 7,500 feet atop Elko Mountain, located 7 miles east-northeast of downtown Elko. To the immediate northwest of Elko is the Adobe Range, another range of large hills and small mountains with peaks of similar elevation. Approximately 20 miles southeast of Elko, the much more prominent Ruby Mountains rise high above the surrounding valleys and reach a maximum elevation of 11,437 feet atop Ruby Dome.

The vegetative pattern in the valleys of the Elko area is known as “sagebrush-steppe” and is dominated by sagebrush, rabbitbrush, and perennial grasses. Lower mountain slopes in the area contain patches of scrubby Utah Juniper trees, while the higher slopes of the Ruby Mountains support groves of Aspen, Whitebark and Limber Pine, and White Fir.

Topographic map of the Elko, Nevada area. Map by USGS.

The climate of Elko is most simply described as being a “high desert” type. High temperatures are hot in the summer, with values frequently exceeding 90 degrees; however, they are much colder in the winter with readings often staying below 40 degrees. Lows in the summer are quite cool, with readings commonly in the 40s; in the winter they frequently fall into the single digits. Individual days often have large ranges in temperature, with 30 degree diurnal ranges common in the winter and 40 or more degree ranges common in summer. These large daily ranges are due to the combination

of Elko’s high elevation, location in a sheltered valley, and generally low humidity. It is also one reason why the growing season is usually quite short, with an average length of about 90 days each year. The last freezing temperature in the spring typically occurs in early or mid-June, with the first freezing temperature of fall usually happening in early or mid-September.

Another somewhat unusual aspect of the temperature regime in Elko is the asymmetric annual temperature curve. On average, the lowest temperatures of the year are experienced just after the winter solstice in late December. From there, a slow but fairly steady warming trend begins and continues straight into late July before leveling off. Starting in August, average temperatures plummet rapidly toward their minimum values in late December. This has the effect of making the spring noticeably longer than autumn. The unusual annual pattern is due to the commonality of upper-level low pressure systems parking themselves over the Intermountain West during the spring, which tends to keep the region cooler than the continental climate of the region might otherwise suggest. These low pressure systems are not often present in the autumn, allowing the rapid temperature drop which is to be expected in an arid to semi-arid region.

Graph of the normal (1981-2010) average temperature in Elko.

The large Sierra Nevada mountain range located far to the west-southwest greatly diminishes the moisture available for precipitation from Pacific storm systems. The local mountain ranges can also cause small-scale rain shadows. Meanwhile, monsoon

moisture which typically flows northward from the tropical Pacific and Gulf of Mexico often stays to the south and east of Elko. These factors combine to result in an arid to semi-arid climate, with most precipitation being light and showery in nature. A distinct dry season occurs during mid to late summer, with a broad wet season stretching from the winter through the spring. Unusually heavy precipitation events with totals in excess of 1 inch are quite rare and generally happen only once every few years. Thunderstorms are most common during the summer months, and are usually caused by passing cold fronts, monsoon moisture from the Southwest, or a cold upper-level low pressure system. While thunderstorms can occasionally produce heavy rain and flooding, they are more likely to produce only a trace to a few hundredths of an inch of rain. These “dry thunderstorms” are the most common cause of the many wildfires that occur across northeastern Nevada each summer.

Graph of the normal (1981-2010) monthly precipitation in Elko.

Snowfall is often light but rather frequent during the winter and snow may persist on the ground for an extended period of time; its presence can also aid in the formation of fog during the winter months. Heavy snowfalls of 6 inches or greater usually happen approximately once a year. Freezing rain and ice pellets are extremely rare. However, graupel is somewhat common, especially during the spring.

Winds are typically diurnally influenced, with a southwesterly “up-valley” wind common during the afternoon and a northeasterly “down-valley” wind common during the early morning. Strong damaging winds usually occur either ahead of or during the

passage of a strong cold front, or during thunderstorms. However, Elko's location at the bottom of a valley tends to prevent the strongest winds from reaching the city most of the time. This ensures that severe winds in excess of 58 mph are a relatively rare event in Elko, with only one or two occurrences in a given year on average. Dust storms can occur when strong winds ahead of a cold front affect a wide area. A strong thunderstorm may also produce a dust storm via strong outflow winds, though these "haboobs" are quite rare.

Skies are often mostly clear for many days in a row during the summer and autumn, with clouds more likely to dim the sun during the winter and spring. During the spring and summer it is not uncommon for days to start out clear and then become cloudy by day's end due to convection.

HISTORY OF WEATHER OBSERVATIONS IN ELKO, NEVADA

Elko is among the oldest Nevada weather stations that are still in service to the present day. The first weather station, in the form of a volunteer “cooperative” station, was established at the old Central Pacific Railroad depot in downtown Elko on February 7, 1870. At first, the station only recorded precipitation data, but was supplied with thermometers starting in February of 1888. For the next 60 years, volunteer observers either working for, or living very close to, the railroad depot in downtown Elko recorded weather data. The volunteer nature of this weather station did pose some difficulties, however. Firstly, daily weather records are only available back to 1888; while earlier records may still exist, they have not been located as of this writing. Secondly, as sometimes occurs with volunteers, there are a great many data gaps and some questionable readings. For these reasons, the data from the early period of record presented here (February 1, 1888 to December 15, 1930) should be used with caution.

Fortunately for the sake of data quality and consistency, the needs of the aviation industry resulted in the establishment of an official government observing site at Elko Regional Airport (then known as Elko Municipal Airport) on December 16, 1930. This was one of the first “Weather Bureau Airport Stations” established in the United States. The observing instruments, now mostly automated, remain at the airport to this day, making it the oldest official airport weather station still in service in the state of Nevada. The automated station is not capable of measuring snowfall, so the staff at the Elko National Weather Service Office located a few miles northeast of the airport is responsible for measuring snowfall at present.

Below is a description of the locations used for official observations in Elko since 1870:

<u>Location</u>	<u>Dates occupied</u>
Vicinity of downtown Elko Railroad Depot	February 7, 1870 – December 15, 1930
United Air Lines Hanger (Municipal Airport)	December 16, 1930 – February 5, 1943
FAA Administration Building (Municipal Airport)	February 5, 1943 – October 15, 1992
Automated Weather Observing System (Regional Airport)	August 1, 1990 - February 14, 2001
Automated Surface Observing System (Regional Airport)	February 14, 2001 - present

The FAA Building at Elko Regional Airport. Weather observers took observations here before the observations were automated. Photo by author.

The Automated Surface Observing System (ASOS) at the Elko Regional Airport currently produces the official weather observations for Elko. Photo by author.

ANNUAL DAILY AVERAGE TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

AVERAGE ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

AVERAGE ANNUAL DAILY MINIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

HIGHEST ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

LOWEST ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

HIGHEST ANNUAL DAILY MINIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

LOWEST ANNUAL DAILY MINIMUM TEMPERATURES (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL FREQUENCY OF DAILY MINIMUM TEMPERATURES OF 32F OR LOWER (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL FREQUENCY OF DAILY MINIMUM TEMPERATURES OF 0F OR LOWER (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL FREQUENCY OF DAILY MAXIMUM TEMPERATURES OF 32F OR LOWER (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

LENGTH OF PERIOD BETWEEN FIRST AND LAST MAXIMUM TEMPERATURE OF 90F (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

TOTAL ANNUAL PRECIPITATION (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

WATER YEAR PRECIPITATION (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL MAXIMUM DAILY PRECIPITATION (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

10 HIGHEST ONE-DAY PRECIPITATION TOTALS, ALL-TIME AND BY MONTH

ANNUAL MAXIMUM TWO-DAY PRECIPITATION (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL FREQUENCY OF DAILY PRECIPITATION OF 0.01 INCH OR MORE (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

ANNUAL FREQUENCY OF DAILY PRECIPITATION OF 0.10 INCH OR MORE (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Use graph with caution.

TOTAL ANNUAL SNOWFALL (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

SEASONAL SNOWFALL (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

SEASONAL SNOWFALL EXTREMES ELKO

10 SNOWIEST SEASONS

91.0 in 1889-1890
79.1 in 1931-1932
75.7 in 1955-1956
75.6 in 1901-1902
71.0 in 1915-1916
70.0 in 1983-1984
69.0 in 1970-1971
68.7 in 1995-1996
67.6 in 1966-1967
67.2 in 1898-1999*

10 LEAST SNOWY SEASONS

6.0 in 1939-1940
12.3 in 1976-1977
12.3 in 1933-1934
13.4 in 1980-1981
13.9 in 1937-1938
15.7 in 1940-1941
16.9 in 1991-1992
17.2 in 2002-2003
18.2 in 1986-1987
18.8 in 1958-1959

ANNUAL MAXIMUM DAILY SNOWFALL (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

ANNUAL MAXIMUM TWO-DAY SNOWFALL (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

10 HIGHEST TWO-DAY SNOWFALL TOTALS, ALL-TIME AND BY MONTH

ELKO

NOTE: * indicates value also occurred previously

ANNUAL NUMBER OF DAYS WITH SNOWFALL OF 0.1 INCH OR MORE (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

ANNUAL NUMBER OF DAYS WITH SNOWFALL OF 1.0 INCH OR MORE (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

NUMBER OF DAYS BETWEEN LAST AND FIRST SNOWFALL OF 0.1 INCH OR MORE (GRAPHED) ELKO

Note: Data may have been affected by the relocation of the main observing site from downtown Elko to Elko Regional Airport in December 1930. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in December 1930. Finally, data may have been affected by the move of the snowfall observing site several miles northeast of the airport in February 2001. Use graph with caution.

ANNUAL NUMBER OF DAYS WITH FOG (GRAPHED) ELKO

ACKNOWLEDGEMENTS

The author would like to thank the staff of the National Weather Service Forecast Office in Elko for providing support to this project. Specifically, he would like to thank Ryan Knutsvig, Science and Operations Officer, and Michael Fitzsimmons, Acting Meteorologist-in-Charge, for reviewing this work.

The author would also like to thank Christopher Stachelski, Climate Focal Point at NWSFO Las Vegas, for inspiration and suggestions.

Finally, the author would like to thank Keith Eggleston at the Northeast Regional Climate Center and Bryant Korzeniewski at the National Climatic Data Center, who have endured my nearly endless edits to the NCDC and NRCC databases which have allowed me to produce this work much more easily than would have otherwise been possible.
