National Interagency Coordination Center Incident Management Situation Report Friday, April 10, 2015 – 0800 MT National Preparedness Level 1

National Fire Activity (Weekly Total)

Initial attack activity: Light (805 new fires)

New large incidents: 14 (*)
Large fires contained: 23
Uncontained large fires: ** 1
Area Command Teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0

Link to Geographic Area daily reports.

Southern Area (PL 2)

New fires:413New large incidents:11Uncontained large fires:1

* **Archuleta**, Osage Agency, BIA. Four miles southwest of Avant, OK. Grass. Smoldering. Structures threatened. Last report unless significant activity occurs.

Additional wildfire information is available through the Geographic Areas at http://gacc.nifc.gov/.

Predictive Services Discussion: Breezy and dry conditions over the southwest U.S. this weekend will give way to precipitation on Monday for some of the desert southwest as a closed low pressure system moves into the region from Mexico. For the southeast U.S. there will be a break in the recent storm pattern this weekend, with showers and thunderstorms resuming early next week along a stalled frontal zone from the southern Rockies through the mid-Atlantic. There will also be a series of upper level troughs of low pressure moving inland from the Pacific Northwest through the Rockies and high Plains with widespread precipitation, including mountain snowfall. The northeast quarter of the Nation will also see upper level disturbances and associated frontal boundaries focus moist and unsettled weather from the Great Lakes through New England. By late next week the weather pattern will become more consolidated with a strong ridge of high pressure over the west and a deep trough of low pressure impacting the eastern half of the U.S.

Hazard Trees – Situational Awareness

Felling Safety Category

Snags (dead, standing trees without leaves or needles in the crowns) and green hazard trees present a significant threat to wildland firefighter safety. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw off embers creating spot fires in advance of the main fire. Snags may burn through more quickly than green trees and can fall without warning. Live, green trees weakened by insects, disease, weather, fire, and age presents another hazard and they can also fall without notice.

- The risk of serious injuries from hazard trees may increase during the night operational period when visibility is reduced.
- While work in cooler, nighttime environments can help control efforts, it also presents an increased risk from unseen falling snags and weakened live trees. Night operations should be restricted in areas of high risk rated dead and dving trees.
- Environmental conditions that increase risk from hazard trees: Strong or gusty winds from storm cells. Air operations - water or retardant drops, rotor wash from helicopters. Steep slopes with rolling material. Erosion and undercut root systems. Diseased or bug-killed areas (Mountain Pine Beetle).
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) in the area. Numerous downed trees/material. Broken tops and dead limbs overhead. Accumulation of downed limbs, tree decay, cavities, splits, cracks, lack of needles, bark, limbs or other indicators of overhead hazards. Roots damaged by equipment, fire or erosion create hazards.
- Mitigation measures to take: Identify and establish No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated. Instruct firefighters of established NWZ in briefings. Identify with flagging/signs, and show area on maps. Establish lookouts to protect NWZs. Assign only qualified sawyers and Falling Bosses. Order additional professional fallers in advance. Use heavy equipment, and blasters when appropriate. Plan a quick and safe escape routes. Do not turn your back on a falling tree or known hazard. Use lookouts to maintain secure felling areas. Maintain situational awareness.
