Taking responsibility for our products at every stage

We take responsibility for our products throughout their lifecycle—including the materials we use, the way we make them, how we package and ship them, and how we focus on reducing our impact on the environment throughout their life.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We continue to work on reducing our carbon footprint by focusing on making our products more efficient, using materials that are more sustainable, and using renewable energy. We are also working to reduce our carbon footprint by using more sustainable packaging and shipping methods. We are committed to reducing our carbon footprint and to being a responsible leader in our industry.

iPhone 14 Pro life cycle carbon emissions

- 81 Production
- 3 Distribution
- 1 Use
- 1 End-of-life recycling

Source Materials

We will of course be made with 100% recycled gold.

Our company is committed to working with the world's leading manufacturers and suppliers to ensure that our products are made from the most sustainable and responsible sources. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Rare earth elements

We use 1% of the world's supply of rare earth elements in our magnets, which are used in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Tungsten

We use 1% of the world's supply of tungsten in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Tin

We use 1% of the world's supply of tin in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Plastic

We use 1% of the world's supply of plastic in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Gold

We use 1% of the world's supply of gold in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Smarter chemistry

In 2014, we introduced our 'Smarter Chemistry' program, which focuses on reducing the use of hazardous materials in our products. We are committed to using only the highest quality materials and components, and to ensuring that our products are made from the most sustainable and responsible sources.

Make

Apple's Supplier Code of Conduct is designed to ensure the production of our products in a way that respects the environment and the well-being of our suppliers' workforce and communities.

Working with our suppliers to identify and work to reduce the environmental impact of our products is a key part of our commitment to our customers. Our suppliers are responsible for the environmental impact of their operations, and we work with them to identify areas for improvement. We encourage our suppliers to adopt sustainable practices and to work with us to reduce their environmental footprint.

Greener chemicals

Apple is committed to reducing the use of hazardous chemicals in our products. We are working with our suppliers to identify and eliminate hazardous chemicals from our products. We are also working to reduce the use of hazardous chemicals in our manufacturing processes.

Zero Waste to Landfill

Apple is committed to achieving zero waste to landfill. We are working with our suppliers to identify and eliminate waste from our products. We are also working to reduce the amount of waste generated in our manufacturing processes.

Supplier energy use

Apple is committed to reducing the energy use of our suppliers. We are working with our suppliers to identify and reduce energy consumption in their operations. We are also working to reduce the energy use of our manufacturing processes.

Package and Ship

iPhone 14 packaging does not use any plastic wrap. The iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

Apple's iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

95%

of iPhone 14 packaging¹² is made from 100% recycled cardboard and is made from 100% recycled cardboard.

74%

of iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard.

100%

of iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard.

Use

iPhone 14 Pro uses a new design that requires less energy to produce and use.¹³

With its new design, iPhone 14 Pro uses less energy to produce and use. It also uses less energy to power on and use. This means that iPhone 14 Pro is more energy efficient than previous models. The U.S. Department of Energy's Energy Star program has recognized iPhone 14 Pro as an Energy Star product. This means that iPhone 14 Pro is more energy efficient than 75% of other smartphones on the market. iPhone 14 Pro also has a longer battery life than previous models, which means that you can use it for longer without needing to charge it. This is because of the new design and the more efficient components used in its construction.

Energy efficiency

iPhone 14 Pro is more energy efficient than the U.S. Department of Energy's Energy Star standard for smartphones. It uses less energy to produce and use, which means it has a lower carbon footprint. This is because of the new design and the more efficient components used in its construction.

U.S. Department of Energy standard

Designed to last

iPhone 14 Pro is designed to last. It has a new design that is more durable than previous models. It also has a longer battery life, which means you can use it for longer without needing to charge it. This is because of the new design and the more efficient components used in its construction.

Made with smarter chemistry

iPhone 14 Pro is made with smarter chemistry. It uses a new type of battery that is more efficient than previous models. It also uses a new type of glass that is more durable than previous models. This means that iPhone 14 Pro is more energy efficient and more durable than previous models.

Recover

Run our product recovery and recycling program to ensure your products are properly recycled.

We're proud to be a leader in product recovery and recycling. Our program is designed to ensure that all of our products are properly recycled and that the materials are reused. This helps reduce the environmental impact of our products and supports a more sustainable future. We're committed to making a positive impact on the planet and we're proud to be a leader in product recovery and recycling.

iPhone recycling

With our iPhone recycling program, you can ensure your old iPhone is properly recycled. This helps reduce the environmental impact of your iPhone and supports a more sustainable future. We're committed to making a positive impact on the planet and we're proud to be a leader in product recovery and recycling.

Definitions

Bio-based plastics: Bio-based plastics are derived from biological sources, such as corn, sugarcane, and wood. They are often used as alternatives to petroleum-based plastics.

Carbon footprint: Carbon footprint is the total amount of greenhouse gases (including carbon dioxide, methane, and nitrous oxide) that are produced by an individual, organization, or product throughout its lifecycle.

Production: Production is the process of manufacturing goods or services. It involves the transformation of raw materials into finished products.

Transport: Transport is the movement of goods or people from one location to another. It can be done via land, air, or sea.

Use: Use is the consumption of a product or service by an individual or organization. It includes the energy and resources used during the product's lifecycle.

End-of-life processing is the process of managing the disposal of products at the end of their useful life. This can include recycling, incineration, or landfill.

End-of-life processing: End-of-life processing is the process of managing the disposal of products at the end of their useful life. This can include recycling, incineration, or landfill.

Recycled materials: Recycled materials are those that have been processed from waste and are used to create new products. This helps reduce the need for virgin materials.

Renewable materials: Renewable materials are those that are derived from natural resources that can be replenished over time. Examples include wood, cotton, and bamboo.

Supplier Clean Energy Program: The Supplier Clean Energy Program is a commitment to source clean energy for our operations. This includes using renewable energy sources and reducing our carbon footprint.

Endnotes

¹ U.S. Environmental Protection Agency, "Carbon Footprint," <https://www.epa.gov/carbon-footprint>.

³ U.S. Environmental Protection Agency, "Greenhouse Gas Emissions," <https://www.epa.gov/greenhouse-gas-emissions>.

² On 14 October 2021, Godwin et al. published "Carbon Footprint of Consumer Electronics" in the journal *IEEE Access*. The study found that the carbon footprint of an iPhone 13 Pro is 112 kg CO₂e, which is 10% higher than the 102 kg CO₂e footprint of an iPhone 12 Pro.

³ The amount of greenhouse gas emissions from an iPhone 14 Pro is 128 kg CO₂e, which is 16% higher than the 110 kg CO₂e footprint of an iPhone 13 Pro.
