

National Firefighter Registry

Requirements Engineering Review

August 2021

Office of Deputy Director for Management

Office of Information Technology and Informatics Services

Agenda

- Identity Management & Privacy Compliance
- Participant Account Considerations
- Account Creation Walkthrough
- Example NFR Participant Profiles
- Project Planning & Timing

Federal System Compliance Requirements

- Protecting participants and their information
 - Basic Identity Theft
 - First Responder Status
 - Personal Information
 - Health Status
 - Employment History
 - Questionnaire Details
- Compliance exists to mitigate risk to participants

FedRAMP System Categorization	Identity Assurance Level (IAL)	Authenticator Assurance Level (AAL)	Federation Assurance Level (FAL)
High	IAL3: In-person, or supervised remote identity proofing	AAL3: Multi-factor required based on hardware-based cryptographic authenticator and approved cryptographic techniques	FAL3: The subscriber (user) must provide proof of possession of a cryptographic key, which is referenced by the assertion. The assertion is signed and encrypted by the identity provider, such that only the relying party can decrypt it
Moderate	IAL2: In-person or remote, potentially involving a "trusted referee"	AAL2: Multi-factor required, using approved cryptographic techniques	FAL2: Assertion is signed and encrypted by the identity provider, such that only the relying party can decrypt it
Low	IAL1: Self-asserted	AAL1: Single-factor or multi-factor	FAL1: Assertion is digitally signed by the identity provider

Protecting Identities and Information

- Protecting data is less burdensome to users than protecting identities and access
 - Data collected from responders can be protected with elaborate measures through hidden background technology
 - One-way data (like survey data) can be collected via secure interface and pushed into a highly secure database
 - Data within a registry that can re-accessed over time by identities (accounts) through authentication (secure login) presents additional risk to be mitigated

Balancing NFR Functionality & Compliance

- When designing systems like NFR, features that improve research and overall value often require enhanced controls to mitigate risk
- Content shared today is intended to drive analysis and input for the best “balance” of functionality and associated controls
- Analysis of benefits vs burden (perceived complexities) should be based on typical firefighter perspective and potential difficulties in communicating security measures

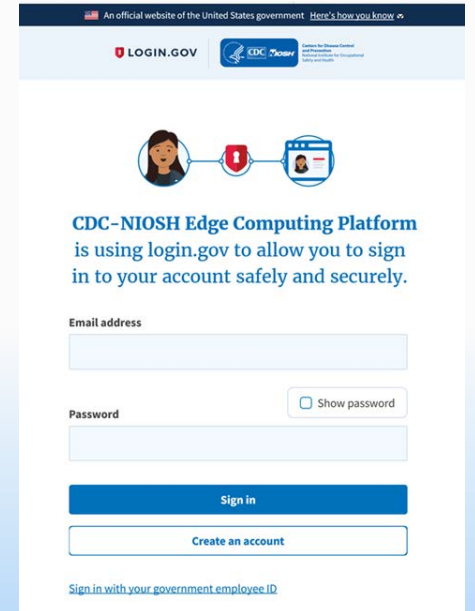

NFR Account Functionality & Design Considerations

- Functionality of the NFR system to offer participant profiles and retrieve sensitive data increase compliance controls
- Long-term functionality should be considered when determining the best approach for participant account management
- To better facilitate updating of data over time, priority should be given to implementing hierarchical, directly accessible profile and survey data that can be easily retrieved, reviewed and updated
- Modular, categorized and directly accessible surveys in an easy-to-use library will provide long-term flexibility to refine and enhance data capture needs

NFR Participation & Account Design Options

1. Full Registration – No Limits on Data Retrieval/Update
 - Robust participant profile includes employment and health history
 - Participant can view and update previously submitted survey data
 - Requires account creation & identity proofing
2. Light Registration – No Sensitive Health Information
 - Profile only includes less-sensitive health identifiers
 - No ability of participant to recall survey response (sensitive health information)
 - Requires account creation
3. No Registration or Profile
 - Functions like a web-based survey
 - No persistent data – each survey is a stand-alone transaction
 - No participant account

Overview of Identity Proofing

- Identity proofing is used to establish uniqueness and validity of an individual's identity
- This is accomplished through automated, digital validation of a participant's state issued ID and personal records
- Federal systems rated moderate that enable retrieval of sensitive information require Identity Assurance (IAL2)
- Identity proofing mitigates risk of account compromise, spoofing or hijacking that would expose sensitive data

Examples of Data and Requirement for Identity Proofing

Data	ID Proofing Required
Name	NO
Residential Address	NO
Email Address	NO
Phone Number	NO
Work Status	NO
Current Department	YES
EmployeeID	YES
Year Start/Stop working	YES
Job Title	YES
Cancer Diagnosis	YES
Date of Birth	YES
Country/City/State of Birth	YES
SSN	YES

- **Option 1**
 - would allow participants to retrieve any previously submitted data, including **basic registration (green)** and **sensitive data (red)**
 - requires **Identity proofing** to protect a participant's **sensitive data (red)** because it can be retrieved and is exposed to the public.
- **Option 2**
 - does not require identity proofing because **sensitive data (red)** cannot be retrieved.
 - would allow participants to retrieve only **basic registration data (green)** because retrieval is limited to less sensitive data
- **Option 3**
 - would not allow participants to retrieve any information. Identity proofing is not required because none of the data can be retrieved

NFR Account Creation via Login.gov

When you're ready to create your secure Login.gov account, you'll need to provide a few pieces of information:

1. Email address

- We recommend a personal email address that you'll always be able to access rather than a work email address.
- If you already have an account with Login.gov with that email address, we'll send you an email to let you know how you can reset your password and access the account.

2. Secure password

- Passwords must be at least 12 characters and should not include commonly used words or phrases.

3. One or more authentication methods such as:

- **More secure**
 - Security Key
 - Authentication application
 - Federal government employee or military identification (PIV/CAC)
- **Less secure**
 - SMS/Text messages
 - Backup codes

Your one account for government

Selecting a 2-factor Authentication Method

Authentication method setup

Add a second layer of security so only you can sign in to your account.

i Keep this information safe. You will be locked out and have to create a new account if you lose your authentication method.

Select an option to secure your account:

Security key

Use a security key that you have. It's a physical device that you plug in or that is built in to your computer or phone (it often looks like a USB flash drive). Recommended because it is more phishing resistant.

MORE SECURE

Government employee ID

Insert your government or military PIV or CAC card and enter your PIN.

MORE SECURE

Authentication application

Get codes from an app on your phone, computer, or tablet. Recommended because it is harder to intercept than texts or phone calls.

SECURE

Phone

Get security codes by text message (SMS) or phone call. Please do not use web-based (VOIP) phone services.

LESS SECURE

Backup codes

We'll give you 10 codes. You can use backup codes as your only authentication method, but it is the least recommended method since notes can get lost. Keep them in a safe place.

LEAST SECURE

Continue

SMS Text Message is Popular 2nd Factor

Send your security code via text message (SMS) or phone call

We'll send you a security code **each time you sign in**.

Message and data rates may apply. Please do not use web-based (VOIP) phone services.

Phone number

example: (201) 555-0123

How should we send you a code?

You can change this selection the next time you sign in. If you entered a landline, please select "Phone call" below.

Text message (SMS)

Phone call

Login.gov Identity Proofing

- required if re-accessing sensitive health information

An official website of the United States government [Here's how you know](#) ▾

LOGIN.GOV  Centers for Disease Control and Prevention

Getting started Verify your ID Verify your personal details Verify phone or address Secure your account

Let's get started

Identity verification happens in two parts:

Verify your identity

We'll ask for your personal information. We'll use, keep and share some of your personal information to verify your identity against public records.

Secure your account

After you verify, we'll ask you to encrypt your account. Encryption means your data is protected and only you, the account holder, will be able to access or change your information.

By checking this box, you are letting login.gov ask for, use, keep, and share your personal information. We will only use it to verify your identity. [Learn more](#) ↗

We have verified your personal information

Enter a phone number with your name on the plan

We'll check this number with phone bill records. This is to help verify your identity; we won't use it to call or text you.

This phone number must...

- be a phone plan associated with your name. You do not need to be the primary account holder.
- not be a virtual phone (such as Google Voice or Skype)
- be a U.S. number

If you set up a phone for two-factor authentication, this can be a different number.

Phone Number

+1 555-555-5555

[Verify your address by mail instead.](#) We'll mail you a letter with a code in it.

In the United States, each state has a cancer registry that collects and combines information on all cancer diagnoses from all hospitals in that state. Providing your social security number (SSN) is the only way to guarantee the information you provide in your user profile and questionnaire matches any past or potentially future cancer diagnosis reported to a state. This information is necessary to meet the statutory requirements or the Firefighter Cancer Registry Act of 2018. You can choose to provide this information or not. However, without this information, your data may not be included in the analysis of firefighters' cancer risk. As noted on the informed consent, all your private information will be encrypted, secured, and protected to the fullest extent allowed by law.

Confirm SSN:

[Why are we asking this?](#)

[Pop-up box if user clicks "why are we asking this"]

Why are we asking for this?
We need to track firefighters' health over time to truly understand their cancer risks and improve their protections. Your social security number will let us do this by linking your information to state cancer registries. With this information we can see any potential future cancer diagnosis without any further action from you. Each firefighter that shares this information will increase the accuracy of our findings, which could potentially lead to greater protections for all firefighters. Sharing your social security number will ensure your participation has the maximum impact.

We will protect your information to the fullest extent allowed by law. The National Firefighter Registry is covered by an Assurance of Confidentiality, which is the highest level of protection available for identifiable information.

Information, or identifiable information, or even for a lawsuit. Your information will be shared with outside groups like your employer, insurance company, or other organizations.
