

Special Exposure Cohort (SEC)

A Closer Look at the Research Behind Your Claim

Fact Sheet

Q: What is the SEC?

A: The SEC is a category of employees established by the Energy Employees Occupational Illness Compensation Program Act of 2000 (EEOICPA). It consists of employees who worked at least 250 days prior to February 1, 1992, at one of the gaseous diffusion plants in Kentucky, Ohio, or Tennessee, or who participated in certain specific underground nuclear tests in Alaska and have any of the 22 specified cancers. A group of employees may be added to the cohort because HHS could not do dose reconstructions with sufficient accuracy and the exposure could have harmed the class.

Q: Can other groups of employees and worksites be added to the SEC?

A: Yes, other groups of employees and work sites can be considered for addition to the SEC through a petition process run by NIOSH on behalf of the Department of Health and Human Services (HHS).

Q: Where can I get information on how to submit a petition?

A: To obtain more information go to the NIOSH Web site at www.cdc.gov/niosh/ocas, or contact NIOSH by phone at 1-800-35-NIOSH (1-800-356-4674).

Q: How much money can I receive if I am a member of the SEC?

A: \$150,000 per qualified energy employee and, in some cases, certain medical expenses.

Q: What are the requirements for me to receive compensation?

A: The energy employee must have worked for a specified period of time at one of the SEC work sites. For a list of current SEC sites visit www.cdc.gov/niosh/ocas. The energy employee must also have developed one of the 22 eligible cancers.

The back page of this fact sheet lists the 22 eligible cancers.
