# Motivation & Focus Area

- **Motivation:**

The impact of changing conditions (e.g., drought, damming) can be studied by looking at changes in the surface profile of inland water bodies measured by GNSS-Reflectometry

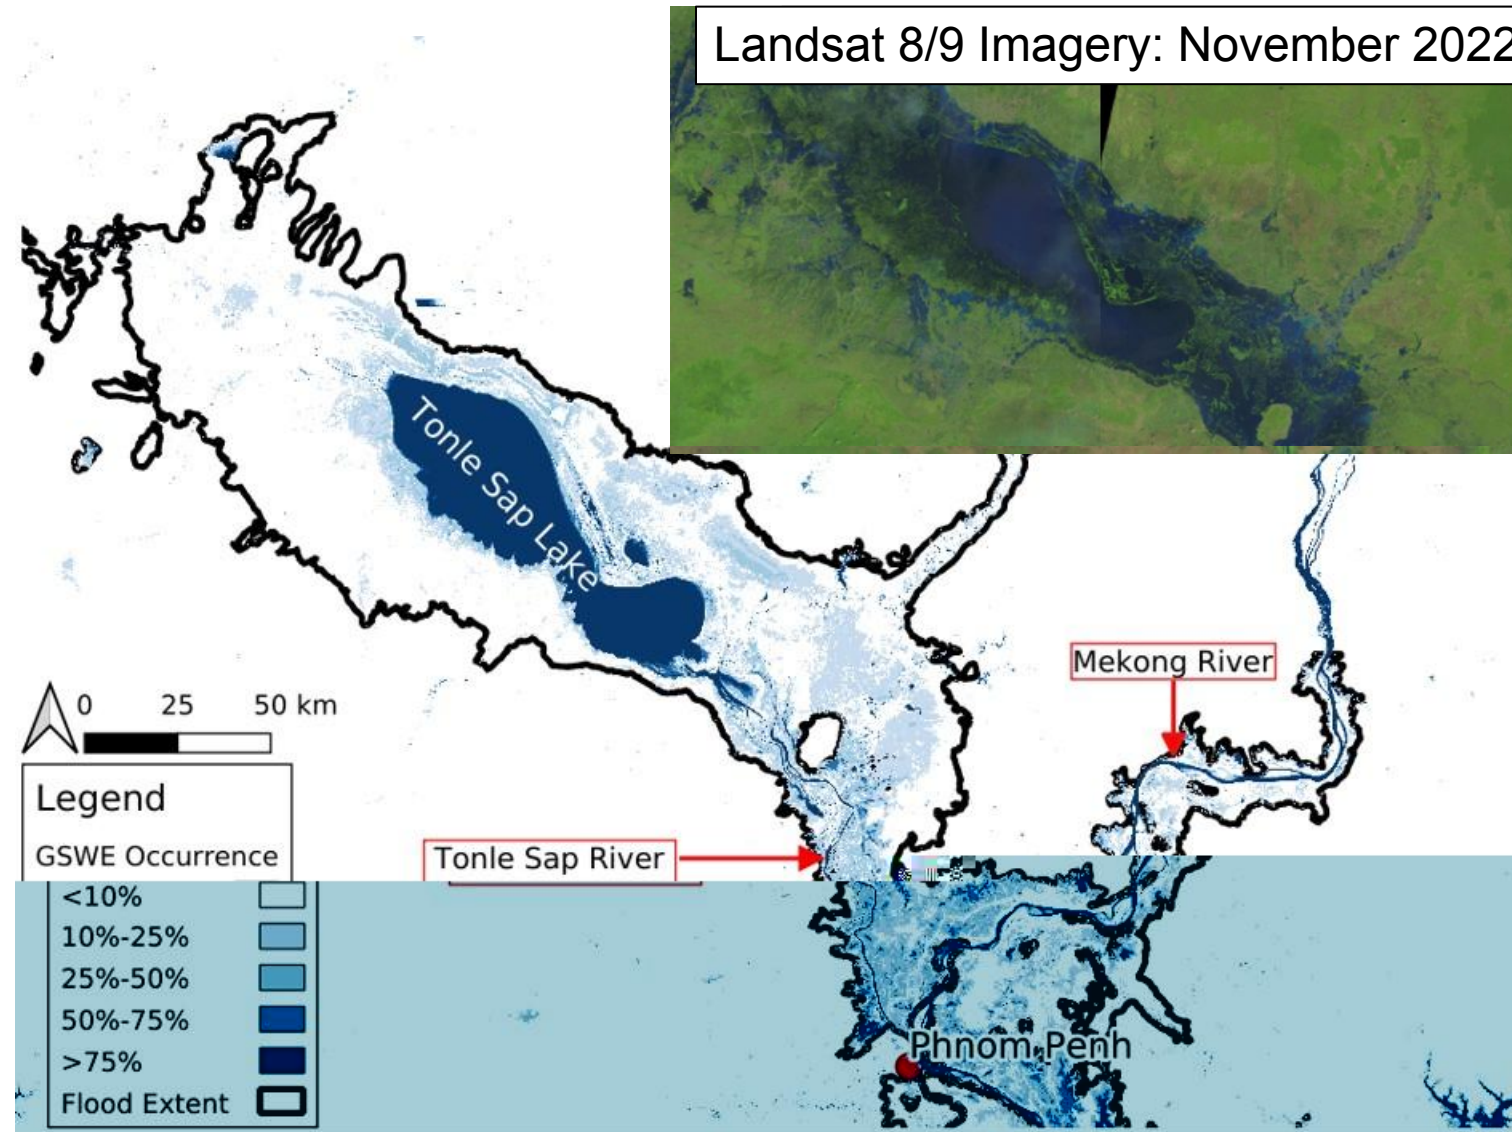

- **Focus Area: Tonle Sap Lake, Cambodia**

- Dry season (Nov-May):

- *Lake drains into the Mekong River*
- *Water Level ~2m; 2500 km<sup>2</sup> surface area*

- Rainy season (June-Oct):

- *Mekong floods-> Tonle Sap river reverses & fills the lake*
- *Water level rises to 10 m; 15000 km<sup>2</sup> surface area*

# Dataset 1: Spire grzRfl GNSS-R

- **Polar, ~500km Orbit**
- **Dual frequency GPS L1(1575.42 MHz) & L2 (1227.6 MHz)**
- **Grazing angle:**
  - 5-30deg elv. angle
- **Land collections Feb, 2021 – Present (our study is 2021-2023)**
- **50 Hz, L1B Product:**
  - Georeferenced excess carrier phase & power data
- **Carrier-phase height is relative**
  - Reference surface from DAHITI+EGM08

$$H = -\frac{\Delta\rho_{meas} - \Delta\rho_{mod} - B + \epsilon}{2 \sin(\theta)}$$

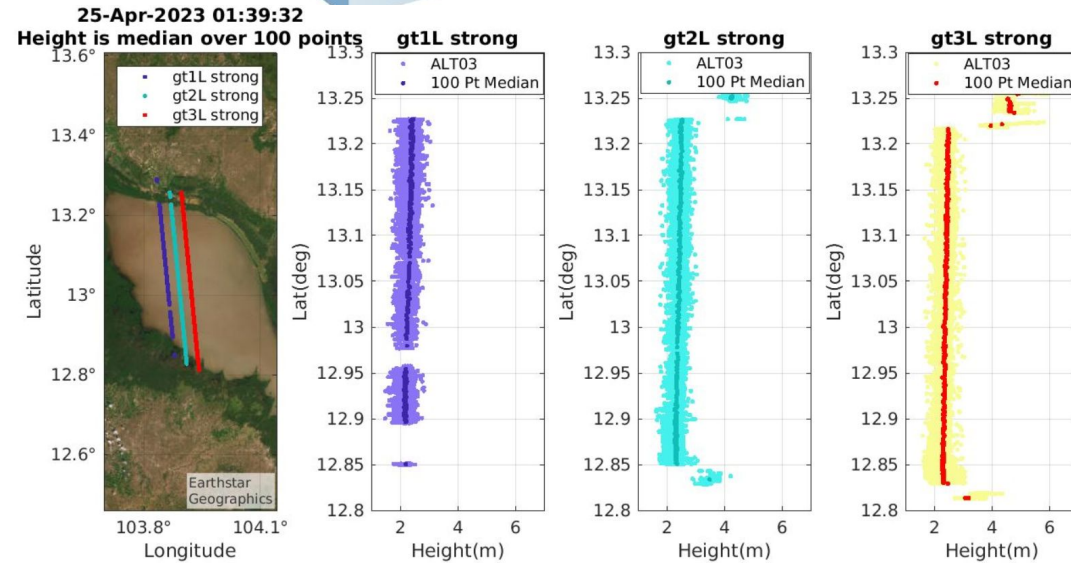

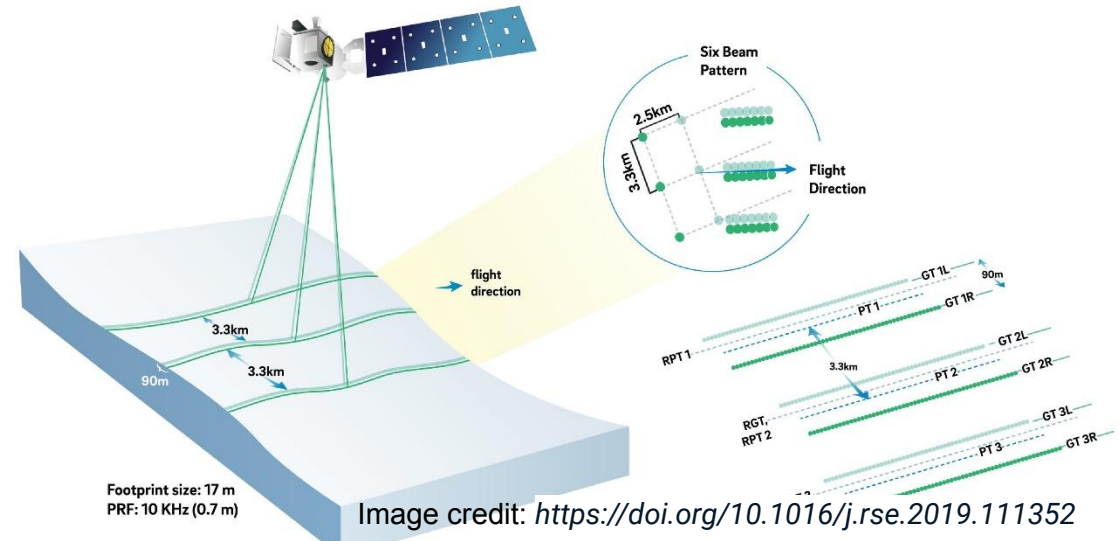

$$\Delta\rho_{meas} = \lambda_L(\phi_L^R - \phi_L^D) + \lambda_L n_L \quad \epsilon = \text{error}$$

$\Delta\rho_{mod}$  = modelled bistatic delay (geometric range, troposphere, ionospheric advance, carrier ambiguity)

C. Roesler, et al.,  
2022

# Dataset 2: ICESat-2

- **532 nm photon-counting with 6 laser beams:**
  - 3 strong, 3 weak
- **10 kHz PRF**
- **Absolute height measurement measuring 2-way time of flight**
- **ATL03 Product: georeferenced photon level data product**
- **Height measured as the median value between GNSS-R specular points (relative to EGM08)**

# Dataset 3: Surface Water and Ocean Topography (SWOT)

- **Launched 2022**
- **Primary Instrument KaRIN:**
  - Near-Nadir Ka-band Interferometric SAR
  - 35.75 GHz (Ka-band)
- **Data products used:**
  - PIXC
  - L2 rasterized product

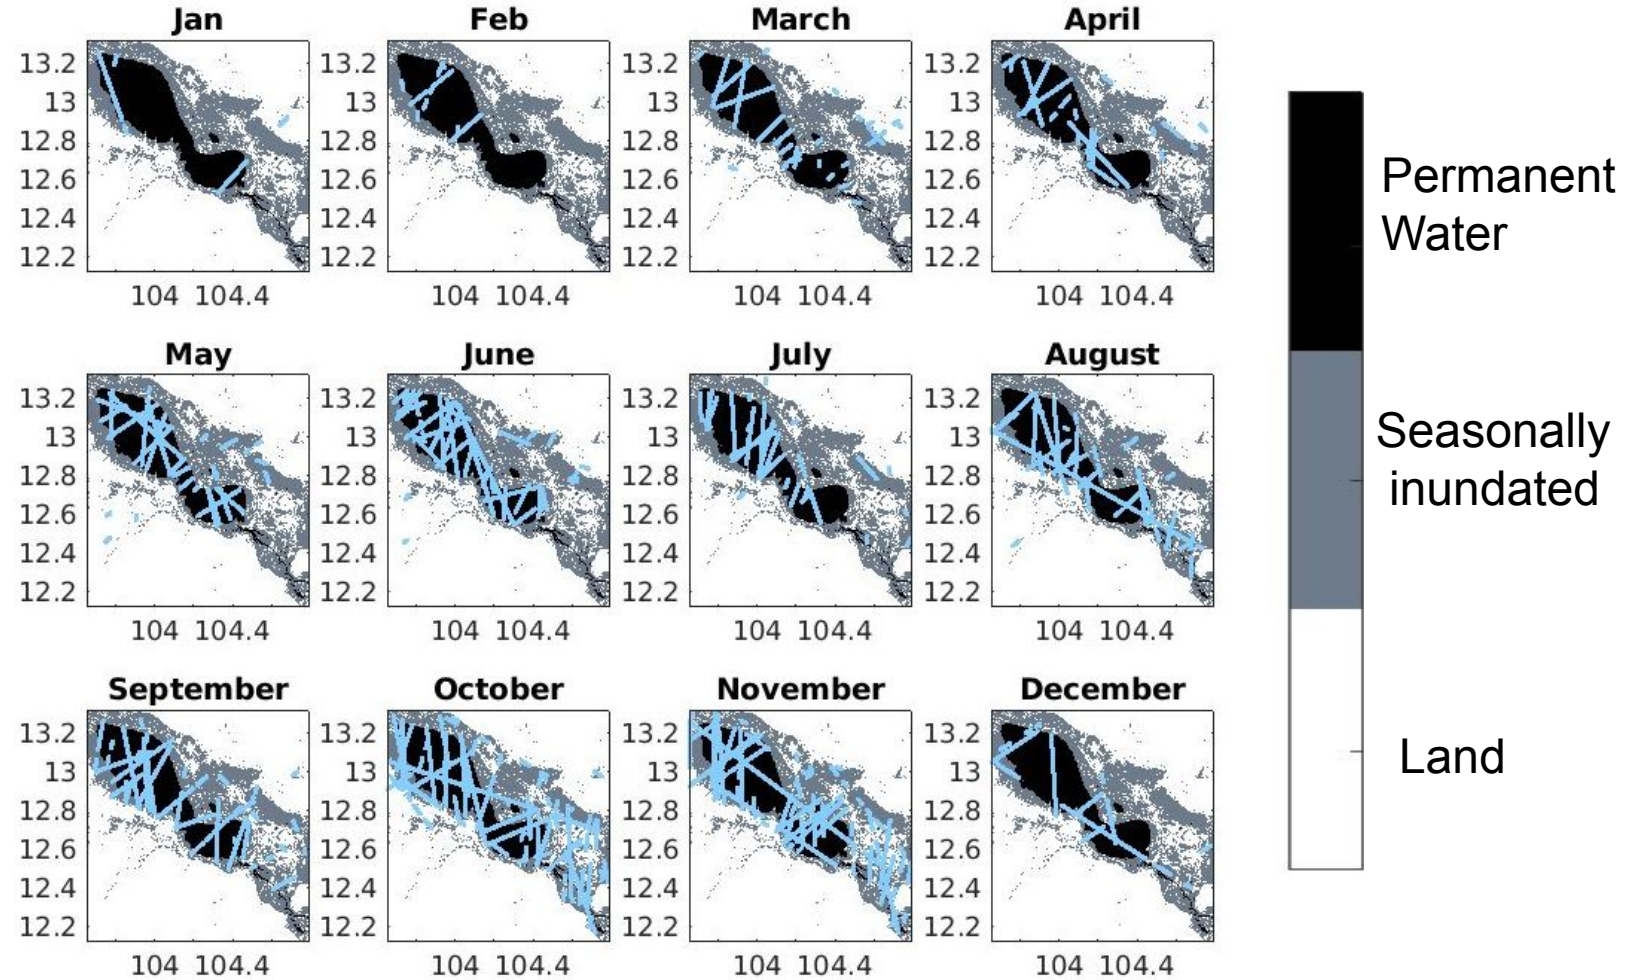

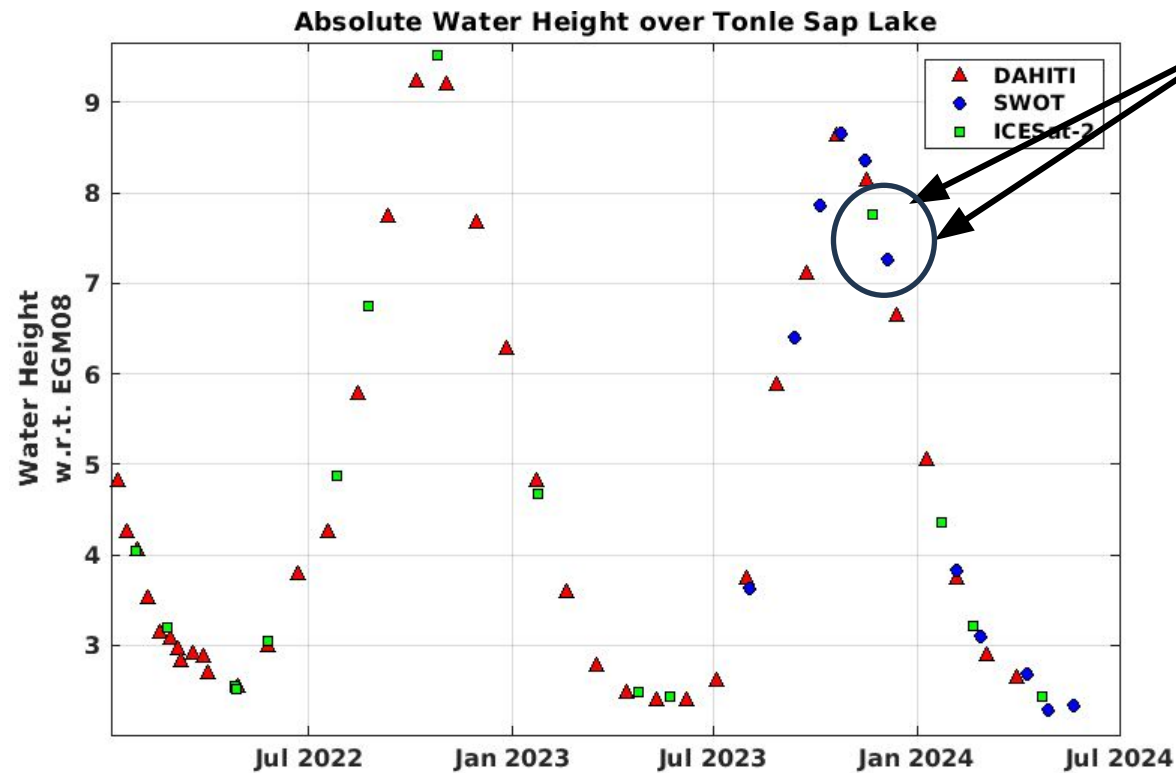

Image Credit: E. Peral  
(2024)

# Why GNSS-R?

- **High spatial & temporal resolution**
- **Diverse look directions across lake**
- **Penetrates cloud and vegetation cover**

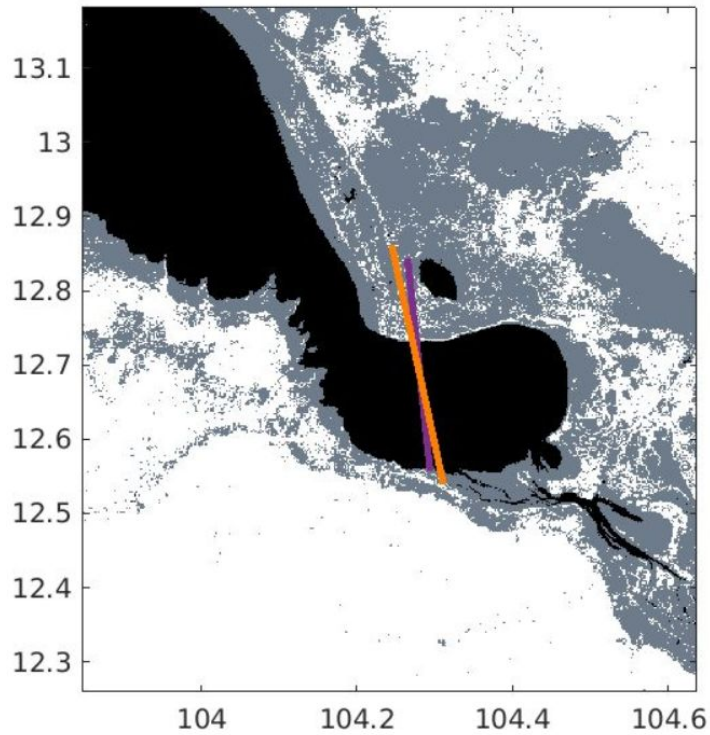

Accumulated Coherent Spire GNSS-R Tracks, 2021-2024

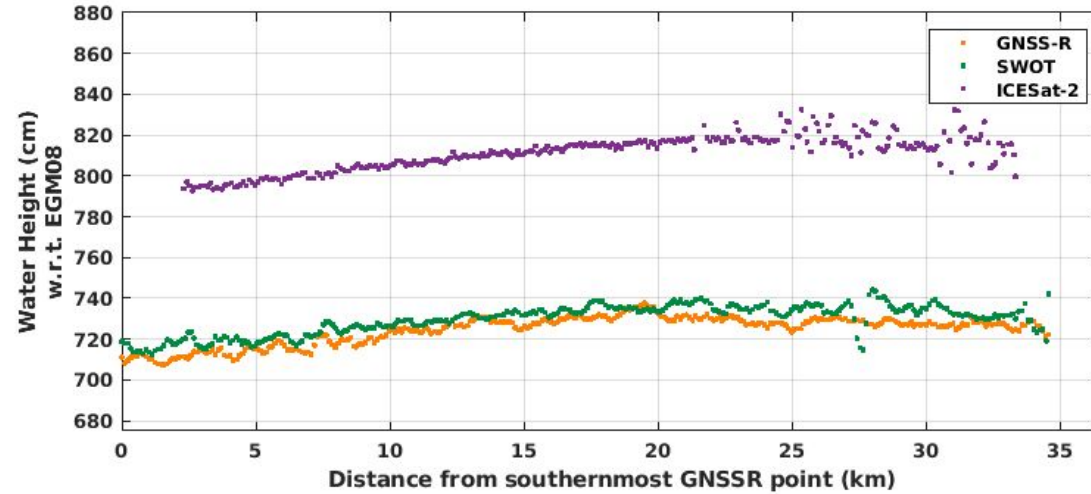

## Results: 1 Case Study

November 21, 2023 (ICESat-2), December 2, 2023 (GNSSR), & December 4, 2023 (SWOT)

- gt3R
- GNSSR
- SWOT
- — Roughly vegetation lat

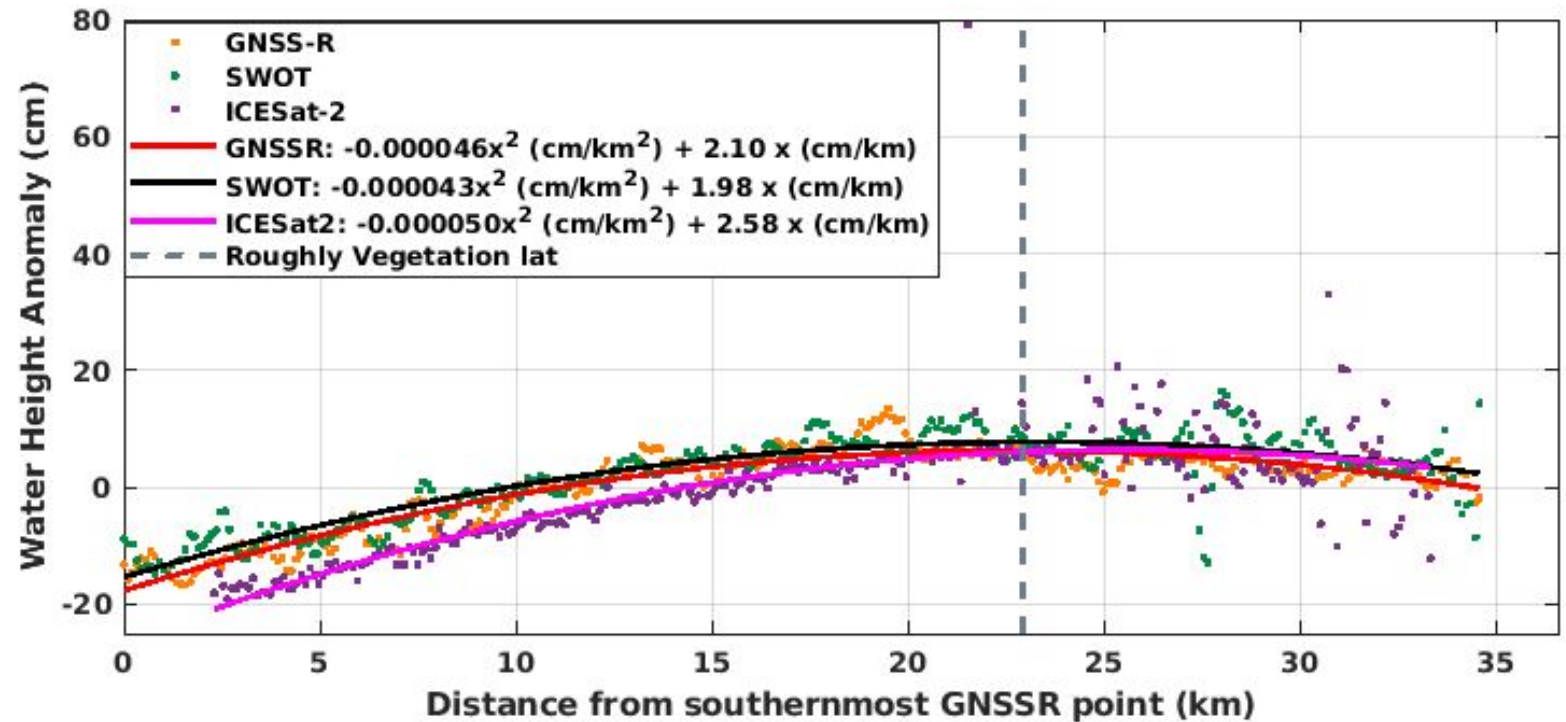

November 21, 2023 (ICESat-2), December 2, 2023 (GNSSR), & December 4, 2023 (SWOT)

Date	Sensor	Open Water $\sigma_{rms}$ (cm)	Water under Vegetation $\sigma_{rms}$ (cm)	Open water R (GNSS,SWOT) ( $\alpha = 0.05$ )	Open water R (ICESat-2,SWOT) ( $\alpha = 0.05$ )	Open water R (GNSS,ICESat-2) ( $\alpha = 0.05$ )
November/ December, 2023	ICESat-2	1.6 cm	6.9 cm	0.91	0.94	0.93
	GNSS-R	2.6 cm	2.2 cm			
	SWOT	2.3 cm	4.6 cm			

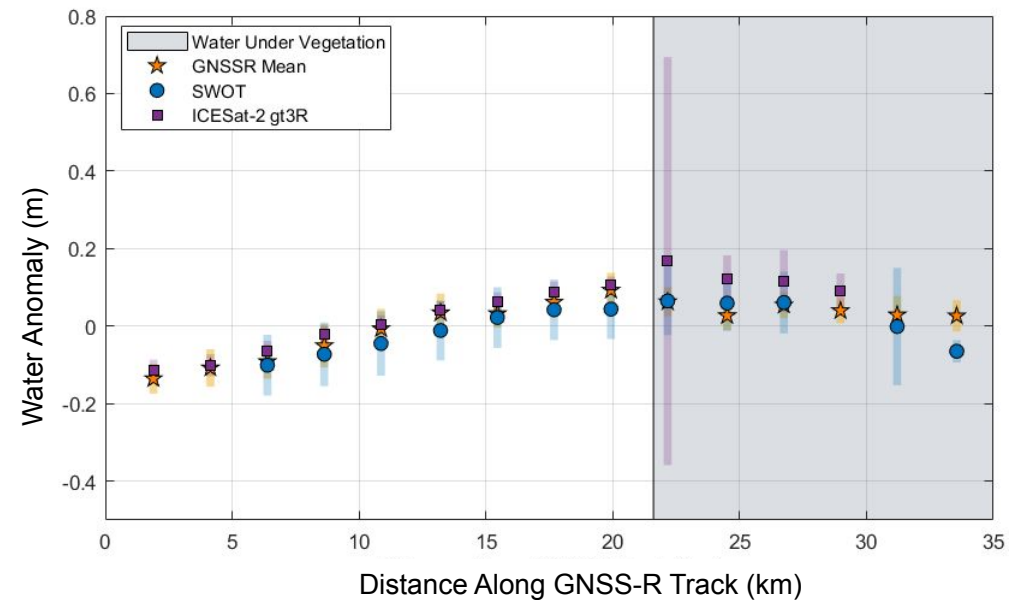

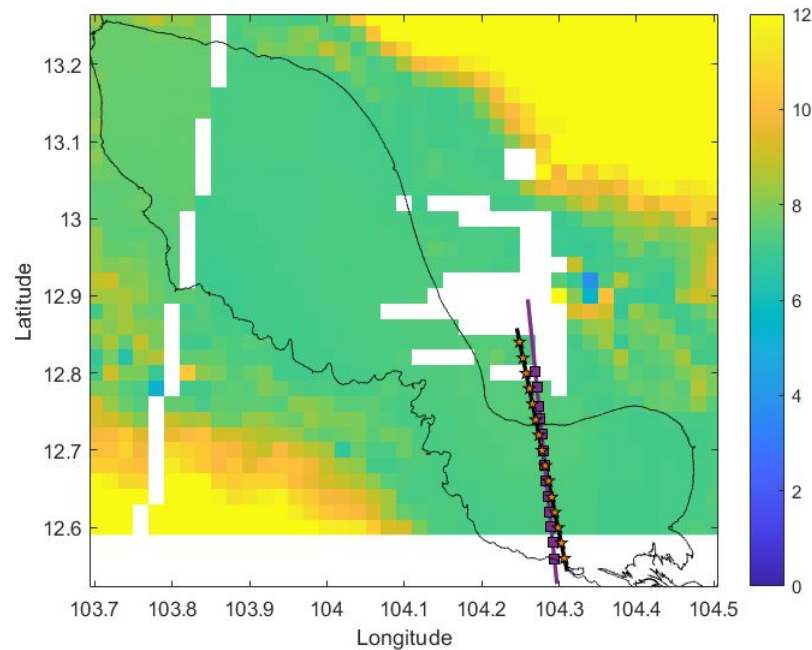

## Interpreting Slope

Measurements important to freshwater resources are height (h), change of height of space (dh/dx), and change of height over time (dh/dt)

**HOWEVER!** It is well-established that geoid anomalies not captured at the resolution of geoid models such as EGM08 can exist over large lakes

# PIXC → L2 Rasterized data from SWOT 0.02° x 0.02° gridding

Importance: Without removing stable structures, comparing water height measurements collected at different regions of a lake may lead to biased results

# Summary

1. **Good agreement across ICESat-2, GNSS-R, and SWOT**

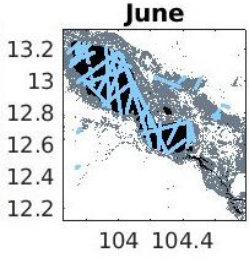

- Started with case-studies comparing data collected in similar place & time

2. **Extended analysis over the same location to a diverse range of times to understand the result, which strongly suggests a geoid anomaly**

- 9 SWOT
- 2 GNSS-R
- 4 ICESat-2

3. **Moving forward:**

- Expand to studying more of the lake
- Determine best way to combine measurements and separate seasonal signatures from geoid signatures

Mission	Advantages	Challenges
ICESat-2	<ul style="list-style-type: none"> <li>• Lowest noise over open water</li> <li>• Dense photon cloud w/in a track</li> <li>• 3-6 laser tracks in 1 pass</li> </ul>	<ul style="list-style-type: none"> <li>• Fewer total number of useable tracks (clouds)</li> <li>• Strongly influenced by vegetation</li> </ul>
GNSS-R	<ul style="list-style-type: none"> <li>• Low-cost</li> <li>• Many tracks, diverse orientations</li> <li>• Penetrates vegetation, clouds</li> </ul>	<ul style="list-style-type: none"> <li>• Relative nature of carrier-phase altimetry</li> </ul> 
SWOT	<ul style="list-style-type: none"> <li>• Swath data</li> <li>• Frequent repeat</li> </ul>	<ul style="list-style-type: none"> <li>• Influenced by emergent riparian vegetation</li> <li>• Ka-band attenuated by rain</li> </ul>

Summary

# Definition of Circular Length

$$\zeta = \frac{1}{N} \left| \sum_1^N \cos \delta\phi_i + j \sum_1^N \sin \delta\phi_i \right|, \quad \zeta \in [0, 1]$$

Higher  $\zeta$  indicates a more coherent phase
