

## Climate Prediction Center's Yemen Hazards Outlook For USAID / FEWS-NET 19 December – 25 December 2024

### Temperatures

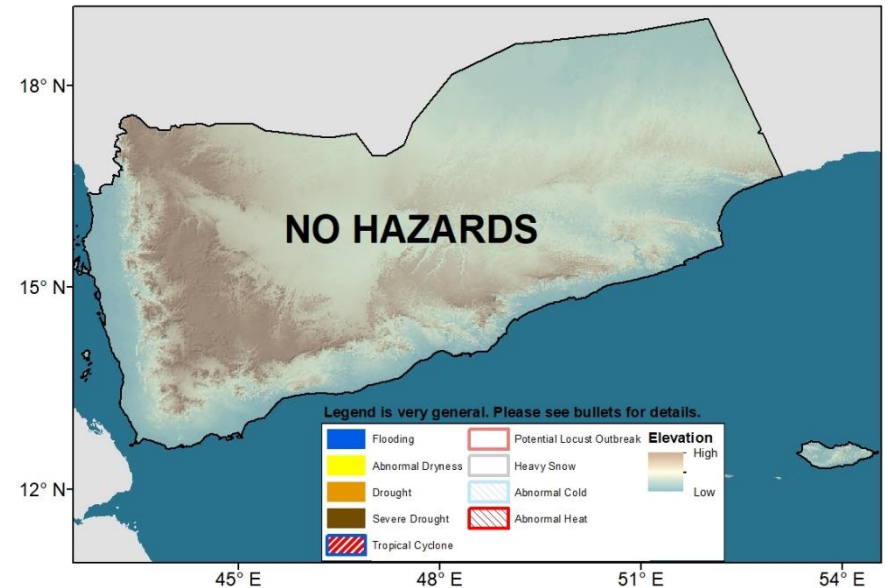

During the past week, cold weather patterns brought below-average mean temperatures over parts of Yemen. While maximum temperatures were 1-2°C below average in the western highlands, minimum temperatures dropped 1-7°C below average in the western and northern parts of the country.

Next week, mean temperatures are forecasted to be 0.5-4°C above average in west-central Yemen. In contrast, mean temperatures will likely drop 0.5-4°C below-average across the eastern counterparts. In general, mean temperatures will vary between 10-20°C over the interior of Yemen.

### Precipitation

During the past week, dry conditions were observed in Yemen. Over the past 30 days, rainfall was slightly above-average in the western portion of the country, but was near-average elsewhere.

Next week, dry conditions are forecasted to continue over Yemen.

**Note:** The Hazards outlook map is based on current weather/climate information, short and medium-range weather forecasts (up to 1 week), sub-seasonal forecasts up to 4 weeks, and assesses the potential impact of extreme events on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed and predicted to continue during the outlook period. The boundaries of these polygons are only approximate at the spatial scale of the map. This product considers long-range seasonal climate forecasts but does not reflect current or projected food security conditions. FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards outlook process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and several other national and regional organizations in the countries concerned.

Questions or comments about the hazard's outlooks may be directed to Dr. Wassila Thiaw, Head, International Desks/NOAA, [wassila.thiaw@noaa.gov](mailto:wassila.thiaw@noaa.gov). Questions about the USAID FEWS NET activity may be directed to Dr. James Verdin, Program Manager, FEWS NET/USAID, [jverdin@usaid.gov](mailto:jverdin@usaid.gov)
