

Faronics  
**POWERSAVE™**

## Reduce Operating Costs by Eliminating Unnecessary PC Energy Consumption

PCs can be significant energy wasters, especially during periods of inactivity. As the price of energy continues to rise, organizations are finding their budgets and profits eroding due to higher operating costs. A dedicated PC power management solution is an inexpensive and impactful way to reduce an organization's power bill and can deliver full return on investment.

Faronics Power Save keeps PCs running when users need them, powers them down when they are inactive, and can prove its rapid return on investment through energy savings reports.

- ▣ **Intelligent Power Savings**  
Intelligent, non-intrusive computer energy management that analyzes multiple indicators of system activity before going into power savings mode.
- ▣ **Non Disruptive**  
Accommodates IT maintenance schedules and allow users to temporarily override power actions when necessary.
- ▣ **Easy to Implement**  
Easy implementation through Audit Mode which provides baseline measurement and estimated savings.
- ▣ **Operational Savings and ROI**  
Provides tangible financial savings and rapid return on investment to organizations through reduced energy consumption.
- ▣ **In-Depth Visibility into Energy Savings**  
Detailed energy savings reports provide visibility into energy savings derived from the use of Power Save.
- ▣ **Manage with a Central Console**  
Management, deployment and configuration is made possible via a single web-based or on-premise console.

### Did You Know?

It takes **966 lbs** of coal to power a computer for one full year.

“Implementing Power Save was easy. It provided great energy and carbon reporting, had clear cost-savings, and most importantly was very visible to our employees to make them aware of our green strategy.”

- Softchoice

### Did You Know?

Cutting PC power consumption by half will save **\$25-75** per PC annually.

## Key Features

**Advanced Activity Monitoring**  
Intelligently monitors CPU, network or disk activity and executes power-saving actions only when the activity falls below a defined level.

**Configurable Energy Management**  
Power Policies allow for different levels of energy management at different times. Energy Consumption Profiles enable fine tuning of individual workstation power use.

**Audit Mode**  
Disables Power Save actions while recording events on workstations for analysis of potential energy savings using Power Save reports.

**End-user Overrides**  
End-users can temporarily disable power management for convenience and customize local wake-up from Hibernate or Standby mode.

**Disruption Mitigation**  
Notifies users and saves open documents, spreadsheets, presentations, and email drafts, prior to going into Power Saving Mode.

**Central Management**  
The web-based and on-premise management consoles make deployment, configuration and management a breeze.

**Flexible Scheduling**  
Easily schedule wake-up, shutdown or restart events.

**Management Reporting**  
Detailed energy use and savings reports based on local costs demonstrate rapid ROI.

**Comprehensive Dashboards**  
The Power Save and Deep Freeze Cloud dashboards make it easy to visualize power consumption information for your entire organization.

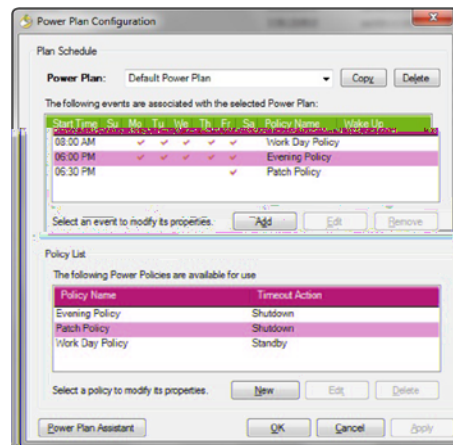

“We’ve deployed Faronics Power Save enterprise-wide on all our workstations, which is saving us over \$50,000 per year in energy costs. That’s \$50,000 that we now have to buy new IT equipment and software, hire more personnel, or invest into employee training.

## Sample Power Plan Configuration

**8:00am** – PCs are turned on and a lax power saving policy is applied because users are working throughout the day.

**6:00pm** – A more aggressive policy is applied because users are heading home now. Also as part of this policy you can ask Faronics Power Save to save any open and unsaved documents for the user before powering down.

**6:30pm** – Faronics Power Save goes into Patch Mode so maintenance can be done on the machines.
