MODEL YEAR 2000 FUEL ECONOMY LEADERS IN POPULAR VEHICLE CLASSES

Listed below are the vehicles with the highest fuel economy for the most popular classes, including both automatic and manual transmissions and gasoline and diesel vehicles. Please be aware that many of these vehicles come in a range of engine sizes and trim lines, resulting in different fuel economy values. Check the fuel economy guide or the fuel economy sticker on new vehicles to find the values for a particular version of a vehicle.

SUBCOMPACT CARS

Ford Explorer 2WD

HOW TO USE THIS GUIDE

HOW WE GET THE FUEL ECONOMY ESTIMATES

The fuel economy estimates are the average of test results conducted for the U.S. Environmental Protection Agency (EPA). The vehicles are driven by professional drivers in controlled laboratory conditions. The results are adjusted to account for differences between the controlled laboratory conditions and real-world driving. Using these

procedures ensures that all testing is fair so that you may compare the results of different vehicles with confidence. The U.S. Department of Energy prints the results in this Guide as an aid to consumers.

THERE ARE TWO FUEL ECONOMY ESTIMATES FOR EACH VEHICLE

“City” represents urban driving where the vehicle is started in the morning after being parked all night and driven in stop-and-go rush-hour traffic.

“Highway” represents a mixture of rural and interstate highway driving in warmed-up vehicles typical for longer trips

Choosing the most fuel-efficient vehicle in a class could save you more than \$1,500 in costs and prevent over 15 tons of greenhouse gas pollution over the lifetime of your vehicle.

USE THIS GUIDE BEFORE BUYING A VEHICLE

Use the fuel economy values to compare different vehicles. You need not sacrifice utility or size to make a difference. Within the same class of vehicles (e.g., midsize car, SUV or minivan) there is a range of fuel economy. The most fuel-efficient vehicles in each class have been printed in blue ink and preceded by a checkmark (✓). By paying attention to fuel economy, as well as to the other features you want, you can help protect the environment and save yourself money.

WHY YOUR FUEL ECONOMY CAN VARY

No test can simulate all possible combinations of conditions: climate, driver behavior, and car care habits. Actual fuel economy depends on how, when, and where a vehicle is driven. EPA has found that the fuel economy obtained by most drivers will be within a few miles per gallon (mpg) of the estimates in this booklet.

FUEL ECONOMY AND YOUR ANNUAL FUEL COSTS

You can use this chart to compare estimated annual fuel costs between vehicles. This will allow you to get an idea of the money you can save each year by choosing a vehicle with better fuel economy. To estimate your annual fuel cost based on driving 15,000 miles per year, look up the city fuel economy of the vehicle in the guide. Find that mpg in the left column of this chart and move across the line to find the estimated total annual fuel cost based on your fuel cost per gallon. If the vehicle listing indicates "P" for premium gasoline, be sure to use a higher cost per gallon than for vehicles using regular gasoline.

ANNUAL FUEL COSTS BASED ON 15,000 MILES PER YEAR

TO SAVE FUEL AND MONEY

- ◆ Combine errands into one trip.
- ◆ Turn your engine off rather than letting it idle for more than a minute.
- ◆ Keep tires inflated to the manufacturer's recommended maximum pressure and the wheels properly aligned.
- ◆ Anticipate situations and avoid unnecessary braking.
- ◆ Use air conditioning sparingly and in recirculation mode whenever possible.

AVOID THESE FUEL-WASTING HABITS

- ◆ Jackrabbit starts and hard braking.
- ◆ Speeding—Obey posted speed limits. Traveling at 80 instead of 70 mph reduces your mileage by over 10%.
- ◆ Carrying excess weight.

mpg	dollars per gallon					
	\$2.00	\$1.80	\$1.60	\$1.40	\$1.20	\$1.00

WHY FUEL ECONOMY IS IMPORTANT

HOW FUEL ECONOMY AFFECTS CLIMATE CHANGE

Burning fossil fuels like petroleum adds greenhouse gases to the earth's atmosphere. Scientific evidence strongly suggests that the rapid buildup of greenhouse gases in the atmosphere is raising the earth's temperature and changing the earth's climate, with many potentially serious consequences.

Vehicles with lower fuel economy create more carbon dioxide—the most important human-made greenhouse gas—than vehicles with higher fuel economy. **Every gallon of gasoline your vehicle burns puts 20 pounds of carbon dioxide into the atmosphere.**

One of the most important things you can do to reduce your contribution to global warming is to buy a vehicle with higher fuel economy. Choosing a vehicle that gets 25 rather than 20 miles to the gallon will prevent 10 tons of carbon dioxide over the lifetime of your vehicle.

HOW FUEL ECONOMY AFFECTS OIL DEPENDENCE AND ENERGY SECURITY

How much oil we import affects our economy and our national security. Today, half of the oil we use is imported. This level of dependence on imports (50%) is the highest in our history and will increase as we use up domestic resources. The vast majority of the world's oil reserves (65% to 75%) are concentrated in the Middle East and controlled by the members of the OPEC oil cartel.

The U.S. depends on oil to move people and goods. Ninety-five percent of the energy for transportation in the U.S. comes from oil. Transportation accounts for two-thirds of total U.S. petroleum use and for nearly all of the high-value petroleum products, like gasoline and distillate fuel.

Buying a more fuel-efficient vehicle can help reduce U.S. petroleum dependence today and create incentives for carmakers to produce cleaner, more energy efficient technologies in the future.

GAS GUZZLER TAX

The Gas Guzzler Tax (marked with "\$" in the Guide listings) applies to cars (not trucks) of exceptionally low fuel economy. To discourage the production and sale of these cars, a tax must be paid by the manufacturer. The words "Gas Guzzler" and the amount of the tax is listed on the vehicle's fuel economy label.

COMPRESSED NATURAL GAS VEHICLES

This section contains the driving range and fuel economy values for vehicles designed to be operated on compressed natural gas (CNG). For dual-fueled vehicles, the values for both gasoline and CNG are shown. Dual-fueled vehicles are designed to be operated on either of two fuels, in separate tanks, and can switch between the two.

When refueling with CNG, the fuel is normally dispensed in “equivalent gallons,” where one “equivalent gallon” is equal to 121.5 cubic feet of CNG. Therefore, the fuel economy values are shown in miles per gallon-equivalent.

The driving range is shown in miles and represents the distance the vehicle can travel on a full tank (or tanks) of fuel during combined city and highway driving (55% city and 45% highway).

CNG= Compressed Natural Gas

Note:

*Driving ranges are shown for standard fuel tanks.

**Driving ranges are shown for additional fuel tanks.

LIQUEFIED PETROLEUM GAS (PROPANE) VEHICLES

This section contains the estimated city and highway fuel economy values and the driving range for passenger cars and light trucks designed to be operated on liquefied petroleum gas (LPG), which is commonly known as propane. For dual-fueled vehicles, both the gasoline and the LPG mpg values and driving ranges are listed, if available. Dual-fueled LPG vehicles typically have two fuel tanks.

At the time of printing there were no data available for Liquefied Petroleum Gas (Propane) Vehicles.

Please check the *Fuel Economy Guide's* website (www.fueleconomy.gov) for updates.

ELECTRIC VEHICLES

This section contains the driving range and fuel economy values for fully electric-powered passenger vehicles. The fuel economy values for electric vehicles are shown in kilowatt-hours per 100 miles, instead of miles per gallon. **A lower number of kilowatt-hours means a more efficient vehicle.**

The driving range is shown in miles and represents the maximum distance the vehicle can travel under optimum conditions before the battery should be recharged. The actual energy consumption and range of the vehicle will vary depending on driving conditions, battery condition, and accessory usage, and is strongly affected by outside temperature and the use of heating and air conditioning. Fuel costs will vary considerably because of the differences in electricity costs across the U.S.

You can calculate the fuel cost (in dollars) to drive your electric vehicle for a year by multiplying the energy consumption for the vehicle as listed below (in kilowatt-hours/100 miles) by your local electricity rate (in dollars per kilowatt-hour), multiplying that by the annual miles the vehicle will be driven, and dividing by 100. An automatic calculator can be found at the website, www.fueleconomy.gov.

Check with your dealer for availability, as some electric vehicles may be offered for sale or lease only in certain parts of the country.

ETHANOL FLEXIBLE-FUELED VEHICLES

This section contains the driving range and fuel economy values for ethanol flexible-fueled passenger cars and light trucks. Ethanol flexible-fueled vehicles are designed to be operated on gasoline, E85 ethanol (a mixture of 85% ethanol and 15% gasoline), or any mixture of the two fuels and typically have only one fuel tank.

The driving range and fuel economy values are shown for both gasoline and E85 ethanol. When operating your flexible-fueled vehicle on mixtures of gasoline and E85 ethanol, such as when alternating between using these fuels, your driving range and fuel economy values will be somewhere between those listed for the two fuels, depending on the actual percent of gasoline and E85 ethanol in the tank.

4 Wheel Drive

SPORT UTILITY VEHICLES

2 Wheel Drive

4 Wheel Drive

WHY SOME VEHICLES ARE NOT IN THE GUIDE

Some larger van, pickup truck, and sport utility vehicle models belong to the heavy-duty vehicle category (vehicles above 8,500 pounds GVWR). Fuel economy regulations do not apply to heavy-duty vehicles. These models do not have fuel economy labels in the window and are not included in this Guide.

NOTE: This guide is based on the latest information available at press time. As more data are received, it will be posted on the website (www.fueleconomy.gov).

SAMPLE FUEL ECONOMY LABEL

(Attached to New Vehicle Window)

Use these two estimates to compare to other models

Compare this vehicle to others by using the **FREE FUEL ECONOMY GUIDE** available in the dealer showroom

This is the average estimate for city driving

CITY MPG
16

This is the average estimate for highway

HIGHWAY MPG
25

These numbers represent a range of fuel economy that most drivers achieve with this particular model

These numbers represent the range of fuel economy for other models of this size class

This fuel cost is based on 15,000 mi/yr at \$1.20 per gallon

Actual Mileage will vary with options, driving conditions, driving habits and vehicle's condition. Results reported to EPA indicate that the majority of vehicles with these estimates will achieve between 13 and 18 mpg in the city and between 21 and 28 mpg on the highway

For Comparison Shopping
All vehicles classified as COMPACT have been issued mileage ratings ranging from 12 to 37 mpg city and 20 to 40 mpg highway

2000 CANARY 2.8 LITER V6
ENGINE 2 BBL CARB MAN 4
SPD TRANS CATALYST,
FEEDBACK FUEL

Estimated Annual Fuel Cost: \$942

Check the fuel economy label on the vehicle at the dealer showroom for its specific fuel economy (mpg) ratings. The ratings may vary slightly from the values in this Guide because of engine and fuel system differences not listed here.
