Subject: Fwd: BYRNE summary of Delta Effects section comments from DOI

Is there a write-up from the SWFSC on why they used the Newman equations rather than e-PTM that we can use to fill in the highlighted placeholder on p. 2 of the attached? I think I know the rough story, but want to be sure we share accurate info.

I recommend that (after deleting internal comments) that we use this (with any needed edits) as a handout for the Delta comments meeting tomorrow.
