Hi Everyone,

Attached is the Study Plan and Study Results for the eDNA study on the lower Bear River (part of a larger Stream Fish Study)...just skim the documents to find the sections that discuss eDNA. Please note that although sturgeon DNA was not detected during the eDNA sampling events (late February and early March 2017), they were observed in the river in November 2016 and in late January 2017.

I'm trying to locate information on the other eDNA sampling project I mentioned and will send that when I track it down.

Hello all -

Attached are two examples of dog training methodologies and species differentiation training from HT Harvey.

Thank you,

Katrina Harrison
