1. PRODUCTS

This is an external user's manual document describing the Joint Polar Satellite System (JPSS) Risk Reduction (RR) products and output files. The JPSS Risk Reduction product system was developed at the Center for Satellite Applications and Research (STAR) and will be implemented into operations at the NOAA NPOESS Data Exploitation (NDE).

The intended users of the External Users Manual (EUM) are end users of the output products and files, and the product verification and validation (V&V) teams. The purpose of the EUM is to provide product users and product testers with information that will enable them to acquire the product, understand its features, and use the data. External users are defined as those users who do not have direct access to the processing system.

1.1. Product Overview

The NOAA JPSS RR System produces a total of 21 products in three different product areas: Clouds, Aerosol, and Cryosphere. The products generated from the Suomi NPP (National Polar Orbiting Partnership) Visible Infrared Imaging Radiometer Suite (VIIRS) Scientific Data Records (SDR) will be used as risk reduction assessment for a cost effective implementation of common NESDIS algorithms for the JPSS program. The output products are intended for operational and scientific users.

1.1.1. Product Requirements

The requirements are to develop a production system to demonstrate that common algorithm approach for new NPP VIIRS satellite products created from upgraded GOES-R algorithms. It is expected to demonstrate a cost effective algorithm development, implementation, transition to operations, and maintenance process for NOAA JPSS products on future JPSS satellites.

1.1.2. Product Team

The VIIRS JPSS RR Development product team consists of members from STAR. The roles and contact information for the different product team members are identified in Table 1-1.

1.1.3. Product Description

The NOAA JPSS RR products will be used as a risk reduction assessment for a cost effective implementation of common NESDIS algorithms for the JPSS system. The system

was designed to run within the NPOESS Data Exploitation (NDE) production environment. The output products are intended for operational and scientific users. Table 1-2 provides information on the algorithms and products.

Table 1-2. JPSS RR Algorithms and Products

Product Category	Algorithm	Product
Cloud	- Cloud Mask - Cloud Phase - Cloud Height - Daytime Cloud Optical and Microphysical Properties (DCOMP) - Nighttime Cloud Optical and Microphysical Properties (NCOMP)	Cloud Mask Cloud Top Phase Cloud Type Cloud Top Height Cloud Cover Layers Cloud Top Temperature Cloud Top Pressure Cloud Optical Depth Cloud Particle Size Distribution Cloud Liquid Water Cloud Ice Water Path
Aerosol	- Aerosol Detection - Aerosol Optical Depth - Volcanic Ash	Aerosol Detection Aerosol Optical Depth Aerosol Particle Size Volcanic Ash Mass Loading Volcanic Ash Height
Cryosphere	- Snow Cover - Ice Concentration - Ice Thickness and Age	Snow Cover (including NDSI Snow Fraction and Reflectance) Ice Concentration and Cover Ice Surface Temperature Ice Thickness/Age

1.1.4. Product History

The algorithms in the JPSS products are modified or upgraded versions of GOES-R algorithms adapted to run on S-NPP VIIRS (except for Snow Cover which is GOES heritage). The result of this implementation is to have just one set of algorithm software that will need to be maintained for generating products from both the GOES-R Advanced Baseline Imager and the JPSS VIIRS instruments. It is expected that instruments onboard future VIIRS satellites will also use these algorithms. This risk reduction project supports the common algorithm approach for new satellite products.

1.2. Product Characteristics

VIIRS is a 22-band imaging radiometer that, in terms of features, is a cross between MODIS and AVHRR, with some characteristics of the Operational Linescan System (OLS) on Defense Meteorological Satellite Program (DMSP) satellites. Several unique characteristics of VIIRS will impact the VIIRS JPSS RR products, which include

- a wider swath,
- high spatial resolution,
- constrained pixel growth: better resolution at edge of swath,
- a visible day-night band (DNB).

1.3. Product Access

All JPSS RR output data files will be made available by the NDE DHS on the NDE data distribution server at ESPC in a near real time manner. For access to this server, information about data files, and associated documentation, the JPSS PAL should be contacted (see Table 1-1).

The NESDIS' Policy on Access and Distribution of Environmental Data and Products is provided at: http://www.ospo.noaa.gov/Organization/About/access.html.

Users need to fill out the Data Access Request Form located on this site and submit to the PAL with a copy to nesdis.data.access@noaa.gov. This address provides the OSPO Data Access Team a copy of the correspondence. The process is defined in the following diagram. Once the request is approved by the OSPO management the data will be delivered by the Data Distribution System (DDSProd) currently distributing the ESPC data products and later by the Product Distribution and Access (PDA) system. The ESPC Data Distribution Manager, Donna McNamara (donna.mcnamara@noaa.gov) should be contacted for any data accessibility and data distribution problems.

The products are in netCDF format and undergo compression while being processed. Table 1-3 lists the JPSS RR output files and their formats. Tables 1-4 to 1-14 show the detailed content of the output files.

Table 1-5 Aerosol Optical Depth Output File

Variable	Type	Description	Dim	Units	Range
AOD550	Float	Aerosol optical depth at 550 nm	2	1	-0.05, 5.0

AOD550LndMdl	Float	Retrieval AOD550 for each land aerosol model: dust, generic, urban, smoke	3	1	-0.05,5
AOD_channel	Float	Aerosol optical depth in selected channels	3	1	0, 12
AerMdl	Byte	Aerosol model: 0-oceanic, 1-dust, 2-generic, 3-urban, 4-heavy smoke	2	1	0, 4
AngsExp1	Float	Angstrom exponent for M4 vs M7 over ocean	2	1	-1, 3
AngsExp2	Float	Angstrom exponent for M7 vs M10 over ocean	2	1	-1, 3
CoarseMdlIdx	Byte	Retrieved coarse aerosol model index over ocean	2	1	1,5
FineMdlIdx	Byte	Retrieved fine aerosol model index over ocean	2	1	1,4
FineModWgt	Float	Retrieved ratio of fine mode optical depth at 0.55 micron over ocean	2	1	0,1
HighQualityPct	Float	Percent of high quality retrievals	0	Percent	0, 100
Latitude	Float	Pixel latitude in field latitude	2	Degrees north	-90., 90.
Longitude	Float	Pixel longitude in field longitude	2	Degrees east	-180., 180.
MeanAOD	Float	Mean AOD at 550 nm	0	1	-1, 5
QCall	Byte	Retrieval quality: 0: no retrieval; 1:low; 2:medium; 3:high	2	1	0, 4
QCExtn	Byte	External flags from input masks: bit 0&1: cloud (0-confClr/1-probClr/2-probCld/3-confCld); bit 2: snow (0-No/1-Yes); bit 3: cloud shadow; bit 4: fire; bit 5: sun glint; bit 6:	2	1	-128,127

		Heavy aerosol			
QCInput	Byte	Flags for input data (0-valid/1-invalid): bit 0: geolocation; bit 1: geometry; bit 2: ancillary model data; bit 3: reflectance	2	1	0, 15
QCPath	Byte	Flags for retrieval path (0-No/1-Yes): bit 0: retrieval over water; bit 1: over bright land; bit 2: over glint water; bit 3: retrieval with SW scheme over land; bit 4: retrieval with SWIR scheme over land; bit 5: retrieval over bright-land algorithm	2	1	0,31
QCRet	Byte	Flags for retrieval (0-No/1-Yes): bit 0: retrieval failed; bit 1: low sun; bit 2: dark barren land surface type; bit 3: extrapolation involved; bit 4: retrieval residula out of range; bit 5: dark land NDVI out of range; bit 6: dark land redness ratio out of range; bit 7: adjacent to cloud or snow	2	1	-128,127
QCTest	Byte	Flags for internal tests (0-No/1-Yes): bit 0: cloudy; bit 1: cirrus; bit 2: thin cirrus; bit 3: inhomogeneous; bit 4: snow/ice; bit 5: ephemeral water; bit 6: shallow water; bit 7: heavy aerosol	2	1	-128,127
ResLndMdl	Float	Retrieval residual for each land aerosol	3	1	0,999

		model: dust, generic, urban, smoke			
Residual	Float	Retrieval residual of the best solution	2	2	0,999
RetrievalPct	Float	Percent of AOD retrievals	0	Percent	0,100
SfcRefl	Float	surface reflectance in selected channels	3	1	0, 1
SpaStddev	Float	Inhomogeneity TOA reflectance standard deviation: M1 over land, M11 over ocean	2	1	0, 1

MaxAllSkyOBS_RTM	Float	Maximum observation - RTM for All Sky IR Channel 07 to 16	1	Kelvin	NA
MeanAllSkyOBS_RTM	Float	Mean observation RTM for All Sky IR Channel 07 to 16	1	Kelvin	NA
StdDevAllSkyOBS_RTM	Float	Std Dev observation - RTM for All Sky IR Channel 07 to 16	1	Kelvin	NA

Table 1-9 Daytime and Nighttime Cloud Microphysics Output File

Variable	Type	Description	Dim	Units	Range
Latitude	Float	Pixel latitude in field latitude	2	Degrees north	-90, 90.
Longitude	Float	Pixel longitude in field longitude	2	Degrees east	-180, 180.
CloudMicroVisOD	Float	Cloud optical depth	2	None	0, 100
CloudMicroVisODMD6	Float	Cloud optical depth	2	None	0, 100
CloudMicroEffRad	Float	Cloud effective radius	2	Micron	0, 100
CloudMicroEffRadMD6	Float	Cloud effective radius	2	Micron	0, 100
CloudMicroLWP	Float	Cloud liquid water path	2	g/m2	0, 5000
CloudMicroIWP	Float	Cloud ice water path	2	g/m2	0, 5000
CloudMicro_Mode	Long	Cloud micro algorithm mode	0	None	1, 3
CloudMicroFlag	Byte	Cloud Micro Flag	3	None	-128, 127
ProcessingFlag	Byte	Cloud micro processing flag	3	None	-128, 127
QualityFlag	Byte	Cloud micro quality flag	2	None	0, 6
DayNightFlag	Long	Day night flag	0	None	NA
MinOpticalDepth	Float	Minimum of optical depth	0	None	0, 100
MaxOpticalDepth	Float	Maximum of optical	0	None	0, 100

		depth			
meanOpticalDepth	Float	Mean of optical depth	0	None	0, 100
StdDevOpticalDepth	Float	Std Dev of optical depth	0	None	0, 100
MinParticalSize	Float	Minimum of particle size	0	Micron	0, 100
MaxParticalSize	Float	Maximum of particle size	0	Micron	0, 100
MeanParticalSize	Float	Mean of particle size	0	Micron	0, 100
StdDevParticalSize	Float	Std dev of particle size	0	Micron	0, 100
NumOfQualityFlag	Long	Number of quality flag	0	None	NA
ValidRetrPct	Float	Valid, good quality converged retrieval	0	Percent	0, 100
ValidDegradedSnowPct	Float	Valid, quality may be degred due to snow or sea ice surface	0	Percent	0, 100
ValidDegradedTwilightPct	Float	Valid, but degraded quality due to twilight conditions: solar zenith bwtween 65 and 82 degree	0	Percent	0, 100
InvalidCloudFreePct	Float	Invalid due to cloud-free condition	0	Percent	0, 100
InvlidOutsideRangePct	Float	Invalid pixel due to being outside of observation range	0	Percent	0, 100
InvalidMissPct	Float	Invalid pixel due to missing data	0	Percent	0, 100
InvalidFaliedPct	Float	Invalid pixel, DCOMP attempted but failed retrieval	0	Percent	0, 100
TotalCloudPixel	Float	Total Number of detected cloud pixels	0	Percent	0, 100
DayTimePixPct	Float	Percent of daytime pixels	0	Percent	0, 100
NightTimePixPct	Float	Percent of nighttime pixels	0	Percent	0, 100
TerminatorPixPct	Float	Percent of terminator pixels	0	Percent	0, 100
NitCat00Pct	Float	Good retrieval	0	Percent	0, 100
NitCat01Pct	Float	Space mask	0	Percent	0, 100
NitCat02Pct	Float	Day	0	Percent	0, 100
NitCat03Pct	Float	Cloud type indicates	0	Percent	0, 100

		it is not a cloud			
NitCat04Pct	Float	Cloud type has an unknown value	0	Percent	0, 100
NitCat05Pct	Float	Unrealistic cloud temperature	0	Percent	0, 100
NitCat06Pct	Float	No retrieval: minimum error model for water = 0	0	Percent	0, 100
NitCat07Pct	Float	No retrieval: minimum error model for ice = 0	0	Percent	0, 100

Table 1-10 Cloud Phase Output File

Variable	Type	Description	Dim	Units	Range

SnowClimTestFlag	Long	Flag to turn on/off the snow climatology test	0	None	NA
LstClimTestFlag	Long	Flag to turn on/off the lst climatology test	0	None	NA
SpatConsTestFlag	Long	Flag to turn on/off the spatial consistency test	0	None	NA
TempUnifTestFlag	Long	Flag to turn on/off the lst spatial variation test	0	None	NA
TempOffset	Float	Temperature offset for LST climatology test	0	None	NA

WinSizeSpatCons	Long	Sliding window size for spatial consistency test	0	None	NA
WinSizeTempUnif	Long	Sliding window size for temperature uniformity test	0	None	NA
MaxFracClearPix	Float	Max fraction (%) of clear pixels within the window for consistency test	0	Percent	0, 100
PixElevThresh	Float	Pixel elevation threshold to apply temperature uniformity test	0	None	NA
FracWarmerPix	Float	Fraction (%) of warmer pixels to reject snow with a temperature uniformity test	0	Percent	0, 100
TempUnifOffset	Float	Temperature difference to identify warmer pixels to reject snow with a temperature uniformity test	0	Kelvin	NA
NumTiePoints	Long	Number of tie points in NDVI/NDSI threshold test	0	None	1, 10
NdviNdsiTiePoints	Byte	Tie-point values for NDVI/NDSI test	0	None	NA
NumPixFlags	Long	Number of pixel flags	0	None	NA
SnowFreeLandFlagVal	Byte	Snow-free land pixel flag value	0	None	NA
SnowFlagVal	Byte	Snow-covered land pixel flag value	0	None	NA
WaterFlagVal	Byte	Water pixel flag value	0	None	NA
CloudFlagVal	Byte	Cloudy pixel flag value	0	None	NA
UndetermFlagVal	Byte	Undetermined pixel flag value	0	None	NA
UnclassFlagVal	Byte	Unclassified pixel flag value	0	None	NA
DarkPixFlagVal	Byte	Dark (insufficient daylight) pixel flag value1	0	None	NA

BadDataFlagVal	Byte	VIIRS bad pixel data flag value	0	None	NA
FillValueFlag	Byte	No VIIRS coverage pixel flag value (fill value)	0	None	NA
RejSnowFlagVal1	Byte	Rejected snow pixel (snow climatology) flag value	0	None	NA
RejSnowFlagVal2	Byte	Rejected snow pixel (temperature climatology) flag value	0	None	NA
RejSnowFlagVal3	Byte	Rejected snow pixel (spatial consistency) flag value	0	None	NA
RejSnowFlagVal4	Byte	Rejected snow pixel (temperature uniformity) flag value	0	None	NA
RejSnowFlagVal5	Byte	Rejected snow pixel spare	0	None	NA
NumTotalPix	Long	Total number of pixels processed	0	None	NA
NumMissPix	Long	Number of data pixels with unavailable SDR	0	None	NA
NumBadPix	Long	Number of data pixels with corrupted/invalid SDR	0	None	NA
NumWaterPix	Long	Number of water pixels	0	None	NA
NumDarkPix	Long	Total number of dark pixels	0	None	NA
NumCloudPix	Long	Number of cloudy pixels	0	None	NA
NumClearPix	Long	Number of cloud-clear land pixels	0	None	NA
NumLandPix	Long	Number of land pixels	0	None	NA
NumUndetermPix	Long	Number of undetermined pixels	0	None	NA
NumUnclassPix	Long	Number of unclassified pixels	0	None	NA
NumSnowPix	Long	Number of snow-covered pixels	0	None	NA
NumNoSnowPix	Long	Number of snow-free land pixels	0	None	NA

NumGoodPix	Long	Number of good land pixels where snow cover identification was attempted	0	None	NA
NumConfSnowPix	Long	Total number of confirmed snow pixels	0	None	NA
NumRejSnowPix	Long	Total number of rejected snow pixels	0	None	NA
NumRejSnowClimPix	Long	Number of snow pixels rejected by the snow climatology test	0	None	NA
NumRejLstClimPix	Long	Number of snow pixels rejected by the lst climatology test	0	None	NA
NumRejSpatConsPix	Long	Number of snow pixels rejected by spatial consistency test	0	None	NA
NumRejTempUnifPix	Long	Number of snow pixels rejected by temperature uniformity test	0	None	NA
FractionLandPix	Float	Fraction of land pixels of all pixels in the granule	0	None	0, 1
FractionSnowPix	Float	Fraction of snow pixels of all pixels in the granule	0	None	0, 1
FractionValidPix	Float	Fraction of valid SDR pixels	0	None	0, 1
FractionCloudPix	Float	Fraction of cloud pixels of all pixels in the granule	0	None	0, 1
FractionNoDataPix	Float	Fraction of pixels with no valid SDR of all pixels in the granule	0	None	0, 1
FractionWaterPix	Float	Fraction of water pixels in the granule	0	None	0, 1
FractionDarkPix	Float	Fraction of pixels with solar zenith angle above the limit	0	None	0, 1
FracMax	Float	Max snow cover fraction	0	None	0, 1

FracMean	Float	Mean snow cover fraction	0	None	0, 1
FracMin	Float	Min snow cover fraction	0	None	0, 1
FracStdDev	Float	Standard deviation of snow cover fraction	0	None	0, 1
FracRtrvdPct	Float	Fraction of pixels for which show fraction was retrieved	0	Percent	0, 100
FracRtrvdTtl	Float	Total number of pixels for which snow fraction was retrieved	0	1	NA
NDSIFracMax	Float	NDSI max snow cover fraction	0	None	0, 1
NDSIFracMean	Float	NDSI mean snow cover fraction	0	None	0, 1
NDSIFracMin	Float	NDSI min snow cover fraction	0	None	0, 1
NDSIFracRtrvdPct	Float	NDSI fraction of pixels for which snow fraction was retrieved	0	None	0, 1
NDSIFracRtrvdTtl	Float	NDSI total number of pixels for which snow fraction was retrieved	0	1	NA
NDSIFracStdDev	Float	NDSI standard deviation of snow cover fractions	0	None	NA
NDSISnowFraction	Float	NDSI-based snow fraction	2	None	0, 1
NDSISnowFractionQuality	Byte	NDSI-based snow fraction quality	2	None	0, 1

State the procedures that should be followed for obtaining near real time (NRT) and archived product data files. This information may be in the developer's Operations Concept Document (OCD). Refer to the OCD in the developer's project artifact repository, if available. *(Document Object 46, PAL)*

2. ALGORITHM

2.1. Algorithm Overview

The JPSS RR products are generated from the Cloud, Aerosol, and Cryosphere algorithms located within the framework. The Cloud algorithms include Cloud Mask, Cloud Phase, Cloud Height, Daytime Cloud Optical and Microphysical Properties (DCOMP), and Nighttime Cloud Optical and Microphysical Properties (NCOMP). The Aerosol algorithms include Aerosol Detection, Aerosol Optical Depth, and Volcanic Ash. The Cryosphere algorithms include Snow Cover, Ice Concentration, and Ice Thickness and Age.

These algorithms run inside a system of supporting software. This is the AIT-Framework system or the GOES-R Algorithm Working Group (AWG) Product Processing System Framework. The Framework has been developed to be plug-and-play system for GOES-R and VIIRS scientific algorithms enabling the development and testing of the Level 2 GOES-R and VIIRS products within a single system. Many of the VIIRS products originated as GOES-R products but have been adapted for the VIIRS satellites. The system has been created to run products and store them in memory to be used as inputs for other products: i.e. product precedence. Common ancillary data has been used by the algorithms and the ancillary data is also stored in memory and treated as precedence for the products. Within the Framework system, the RR algorithms have flexible interface designs that allow the different types of instruments/satellite data sets. Therefore the RR algorithms are the same for GOES-R products and corresponding JPSS RR products.

2.1.1 Pre-Processing Steps

For JPSS RR, there are two steps in order to generate the VIIRS products: The pre-processing step and main-processing step. The main purposes of the preprocessing are to do the data gap filling and HDF5-to-NetCDF4 conversion.

During Preprocessing steps, JPSS RR software first reads in the system PCF file. Next JPSS software converts the HDF5 format VIIRS data to NetCDF4 format and performs data gap filling, then generates/writes out Framework output of SDR data and ancillary products by calling the Framework program. For detailed information about the preprocessing steps, please refer JPSS RR System Maintenance Manual.

2.2. Input Data Files

This section describes the input data files required by the JPSS RR system, including the satellite data, the ancillary data required by the AIT-framework to generate the products, as well as the algorithm specified coefficient files, etc. All of these files are defined in the system PCF files through the File-Handle-Name (the left side of the equal sign in the PCF file).

The JPSS RR system requires AIT-framework configuration files (CFG) and process control files (PCF) in text format.

An AIT-framework CFG file is required to run the AIT-framework program and in the CFG file, a number of AIT-framework PCF files are specified. The data is passed to the AIT-framework program through the Framework-CFG and Framework-PCF files by specifying the data files in these Framework-CFG and PCF.

2.2.1. Satellite Data Files

To generate JPSS RR products, VIIRS satellite pixel files in NetCDF4 format are required.

It only uses whichever I or M band data is required to run the JPSS RR system. They are VIIRS Science Data Records (SDR) Moderate Resolution Band 01 -16 SVM01-16, Terrain Corrected Geolocation data GMCTO, VIIRS SDR Imagery Bands 01-05 SVI01-05, and VIIRS Image Bands SDR Terrain Corrected Geolocation data GICTO. The Bayseian CloudMask algorithm uses I band 1/4/5 resolution to produce the dust mask. These data files are the VIIRS input to the JPSS RR system. All of these files are in HDF5 format and are generated by the IDPS system at NDE. The details of the File-Handle-Name in the system's PCF and the corresponding satellite data files are listed in JPSS RR System Maintenance Manual.

2.3. Ancillary Data Files Required by AIT-framework

The ancillary files are in NetCDF format, except for the CRTM coefficient files, which are in binary format. Each of the three product categories requires some ancillary files. The Cloud products require NWP GFS data, NWP Snow Mask, 1km NASA Land Mask, 1km NASA Coast Mask, Desert Mask, AVHRR Surface Type, 1km Surface Elevation, Seebor Surface Emissivity, Surface Albedo, Pseudo Emissivity, OISST, and CRTM. The Aerosol products require 1km NASA Land Mask, Desert Mask, NWP GFS data, and NWP Snow Mask. The

Cryosphere products require Land Mask, Surface Elevation, and Climatic LST. In addition, all of the products require ancillary data for the VIIRS SDR reader. These ancillary products are described below.

2.3.1. Land Mask

The land mask is derived from the NASA EOS project supplied static dataset as well as World Vector Shoreline data and DTED DEM data provided by NIMA (then DMA) and bathymetric data provided by the oceanographic community.
The original global binary file, version 3, produced in 2003 by Robert Wolfe, was converted to NetCDF and HDF for usage in the framework. Resolution: The land/ocean mask is stored in a 1 km geographic (geodetic) projection.
Filename: lw_geo_2001001_v03m.nc
Origin: Created by SSEC/CIMSS based on NASA MODIS collection 5
Size: 890 MB.
Static/Dynamic: Static
Values:

0 = Shallow ocean
1 = Land (Nothing else but land)
2 = Ocean coastlines and lake shorelines
3 = Shallow inland water
4 = Ephemeral water
5 = Deep inland water
6 = Moderate or continental ocean
7 = Deep ocean

2.3.2. Coast Mask

The coast mask is created from the land/water mask and differentiates coast at resolutions ranging from 1 – 10 km. It is produced by searching for heterogeneity in concentric boxes 3x3 (1 km) up to 21x21 (10 km) of pixels centered on any given pixel.
Resolution: The coast mask is stored in a 1 km geographic (geodetic) equal area projection.
Filename: coast_mask_1km.nc
Origin: Created by SSEC/CIMSS based upon NASA MODIS collection 5.
Size: 890 MB.
Static/Dynamic: Static

Values: A value of 1 means that the pixel 1km away is a water/land transition or is a water/land transition. 0 is considered the fill value of the coast mask.

2.3.3. NWP Snow Mask

The NWP Snow Mask ancillary algorithm generates the Snow Mask from the following ancillary products: GFS NWP Data (section 2.3.10), Land Mask (section 2.3.1), and OISST Daily Data (section 2.3.11).

2.3.4. Calculated Desert Mask

The Calculated Desert Mask uses two ancillary products to generate the desert mask: Land Mask (section 2.3.1), and Surface Type (section 2.3.7). A value of 0 means no desert, 1 is wooden grass, closed shrubs, open shrubs, grasses, or cropland, and 2 is bare surface.

2.3.5. Surface Elevation Mask

The digital surface elevation is Global Land One-km Base Elevation (GLOBE) Project 1km database global file converted into a file format readable by the framework.
Resolution**:** The surface elevation is stored as meters in a Plate Carrée projection at 30 arc-second (1km) resolution.
Filename: GLOBE_1km_digelev.nc
Origin: NGDC
Size: 1843.2 MB
Static/Dynamic: Static

2.3.6. Climatic LST

The Climatic Land Surface Temperature (LST) product is monthly-averaged mean surface temperatures over the globe at 2.5 degree resolution. The data is from the International Satellite Cloud Climatology Project (ISCCP). Data is interpolated between two consecutive months to arrive at an average of the date of the satellite data. The temperature is in degrees K, and the twelve input NetCDF datasets are in the following format: climatic_lst_month_XX.nc, where XX is the two digit number of the month (01 to 12). Each file is 47 K in size.

2.3.7. Surface Emissivity SEEBOR

The surface IR emissivity for ABI bands from UW-Madison baseline fit database. This is a global database of monthly (001-031, 032-059, etc.) IR land surface emissivity derived from the Moderate Resolution Imaging Spectroradiometer (MODIS) operational land surface emissivity product (MOD11). Emissivity is available globally at ten wavelengths (3.6, 4.3, 5.0, 5.8, 7.6, 8.3, 9.3, 10.8, 12.1, and 14.3 μm). Monthly emissivities have been integrated into the ABI spectral response functions to match the ABI bands. The SEEBOR emissivity training set was interpolated over the spectral response function for a given channel at each data point. These are then output to a static file for usage in the framework. For the production of the test dataset, the ABI SRFs, provided by the Imagery AWG, were used to produce the static emissivity dataset.
Resolution: 0.05 degree (5km) spatial resolution
Filename: global_emiss_intABI_YYYYDDD.nc where**,** YYYYDDD = year plus Julian day
Origin: UW Baseline Fit, Seeman and Borbas (2006).
Size: 693 MB x 12
Static/Dynamic: Dynamic
Values: The emissivities are fractional values scaled with a scale factor of 0.001 and have fill value of -9999. Generally, the data points that are the fill value are ocean or water pixels.

Surface emissivity at 5km resolution (climatologically monthly), required by AIT Framework is listed in Table 2-1.

Table 2-1 Surface Emissivity Data

File Name	Description	Size (MB)
global_emiss_intABI_2005001.nc	SEEBOR data for January	693
global_emiss_intABI_2005032.nc	SEEBOR data for February	693
global_emiss_intABI_2005060.nc	SEEBOR data for March	693

global_emiss_intABI_2005335.nc	SEEBOR data for December	693

2.3.8. Surface Type Mask

A global land cover classification collection created by The University of Maryland Department of Geography. Imagery from the AVHRR satellites acquired between 1981 and 1994 was used to distinguish fourteen land cover classes and was updated in 2001. The original binary file is available at:

Resolution**:** This product is available at 1 km resolution in a 1 km geographic (geodetic) equal area projection.
The data are arranged with the upper left hand corner having a latitude/longitude of 90.0, -180.0 and lower right corner with a latitude/longitude of 90S, 180.0.

Filename: gl-latlong-1km-landcover.nc
Origin: University of Maryland
Size: 890 MB
Static/Dynamic: Static
Values:

0 = Water
1 = Evergreen Needleleaf Forest
2 = Evergreen Broadleaf Forest
3 = Deciduous Needleleaf Forest
4 = Deciduous Broadleaf Forest
5 = Mixed Forests
6 = Woodland
7 = Wooded Grassland
8 = Closed Shrubland
9 = Open Shrubland
10 = Grasslands
11 = Cropland
12 = Bare Ground
13 = Urban and Built-Up

2.3.9. CRTM Coefficients

CRTM coefficient files for VIIRS data, required by AIT Framework, are shown in Table 2-2.

Table 2-2 CRTM Coefficient Data

File Name	Description	Size (KB)
AerosolCoeff.bin	Aerosol Coeff data for CRTM	5766260
CloudCoeff.bin	Cloud Coeff data for CRTM	1654180
EmisCoeff.bin	Emissivity Coeff data for CRTM	1888256
viirs-m_npp.SpcCoeff.bin	Space Coeff data for NPP VIIRS-M	472
viirs-m_npp.TauCoeff.bin	Tau Coeff data for NPP VIIRS-M	105704

2.3.10. Ancillary Data for VIIRS SDR Reader

These two files contain NPP VIIRS 16 M-band and I-band channel information, Planck coefficients and spectral ranges. It is used by the framework SDR Data Readers.

File Name: npp_viirs_ancil.Ibands.nc
Size: 2240 KB

File Name: npp_viirs_ancil.Mbands.nc
Size: 2258 KB

Ancillary data contains information such as channel mapping.

File Name: npp_viirs_ancil.nc
Size: 2312 KB

2.3.11. NWP Data - GFS GRIB2 Forecast Files

These are GFS 6-hour global forecast data files at 0.5 degree resolution in GRIB2 format from NCEP.

File Name: *gfs.t${Hour}z.pgrbf${Forecast}.YYYYMMDD*
Size: 51~52 MB

2.3.12. Desert Mask

The desert mask uses the NASA 1km land mask and 1km surface type ancillary algorithms to calculate the desert mask. A value of ‘0’ denotes no desert, ‘1’ refers to wooden grass, closed shrubs, open shrubs, grasses, or croplands, and ‘2’ is desert. There are no external files associated specifically with this algorithm.

2.3.13. Surface Albedo

The surface albedo provides a global estimate of the cloud-clear white sky reflectance from 2004 MODIS data. The albedo is an averaged value over a seventeen day period. There are three wavelengths, 0.659 um, 1.64 um, and 2.13 um.

Filenames:
AlbMap.WS.c004.v2.0.2004.DDD.0.659_x4.nc
AlbMap.WS.c004.v2.0.2004.DDD.1.64_x4.nc
AlbMap.WS.c004.v2.0.2004.DDD.2.13_x4.nc

Where DDD is the Julian day of the year, which ranges from 001 to 353 in increments of 17. There are a total of 66 files. Each file is 28 MB in size.

2.3.14. Pseudo Emissivity

The pseudo emissivity uses the Plank function to calculate the channel 7 emissivity. There are no external files associated with this algorithm.

2.3.15. OISST Daily Data

It is the Reynolds OISST daily analysis at 0.25 degree resolution from NCDC

File Name: avhrr-only-v2.YYYYMMDD_preliminary.nc
Size: 8.0 MB

3. PERFORMANCE

3.1. Product Testing

3.1.1. Test Data

Description of all JPSS RR test data (input, output, and intermediate) used in unit and system tests is provided in the JPSS RR Algorithm Readiness Review and Test Readiness Document (NESDIS/STAR, 2015). These are available by contacting the JPSS RR Product Area Lead (PAL) at OSPO.

3.1.2. Test Plans

Description of all JPSS RR test plans used in unit and system tests is provided in the JPSS RR Algorithm Readiness Review and Test Readiness Document (NESDIS/STAR, 2014). These are available by contacting the JPSS RR Product Area Lead (PAL) at OSPO.

3.2. Product Accuracy

3.2.1. Test Results

Description of all JPSS RR test results from the unit and system tests is provided in the JPSS RR Algorithm Readiness Review and Test Readiness Document (NESDIS/STAR 2014). These are available by contacting the JPSS RR Product Area Lead (PAL) at OSPO.

3.2.2. Product Accuracy

JPSS RR products have been validated against observations. The accuracy and precision of the JPSS RR products fall well within the accuracy and precision specifications. The detailed validations are available at Algorithm Readiness Review by contacting the JPSS RR Product Area Lead (PAL) at OSPO.

3.3. Product Quality

Quality flags are expected to be zero, which means no error.
Each failure is associated with a unique “flag” value that is saved in the JPSS RR output files. These values are shown in Tables 3-1 to Table 3-12 for the algorithms.

Table 3-1: Cloud Mask Failure Codes.

Cloud Mask Quality Control Codes	
QC_Flag	**Definition**
0	Good
1	Invalid pixel due to space view
2	Invalid pixel due to being outside of sensor zenith range
3	Invalid earth pixel due to bad data (bad or missing 11mm BT or bad/missing clear sky 11 mm BT)
4	Reduced quality Cloud mask (bad 3.9mm pixel)
5	Reduced quality 0.64mm tests
6	Reduced quality due to other bad channels (excluding 0.64, 3.9, or 11 mm)

Table 3-2: Cloud Phase/Type Quality Flags.

Cloud Phase/Type Quality Control Codes		
Bit	**Definition**	**Bit Interpretation**
1	**Overall cloud phase product quality flag** – the overall quality will be set to "low quality" if any of the more specific quality flags listed below are set to "low quality"	0 = high quality 1 = low quality
2	**L1b quality flag** – this will be set to "low quality" if any of the spectral data used in the algorithms is of low quality, based on L1b calibration flags	0 = high quality spectral data 1 = low quality spectral data
3	**Beta quality flag** – this will be set to "low quality" if $\beta_{stropo}(12/11\mu m)$, $\beta_{sopaque}(12/11\mu m)$, $\beta_{stropo}(8.5/11\mu m)$, **or** $\beta_{sopaque}(8.5/11\mu m)$ fall outside of the 0.1 – 10.0 range	0 = high quality beta calculation 1 = low quality beta calculation
4	**Ice cloud quality flag** – this will be set to "low quality" if the cloud phase was determined to be ice and the $\varepsilon_{stropo}(11\mu m) < 0.05$	0 = ice cloud determination based on strong radiative signal 1 = ice cloud determination based on weak radiative signal (low quality)
5	**Surface emissivity quality flag** – this will be set to "low quality" if the result of the Low Surface Emissivity (LSE) Test is TRUE and	0 = surface emissivity does NOT significantly impact product quality

	the result of the Overall Opaque Cloud (OOC) Test is FALSE	1 = surface emissivity significantly impacts product quality (low quality)
6	**Satellite zenith angle quality flag** – this will be set to “low quality” if the cosine of the satellite zenith angle is less than 0.15 (~82 degrees)	0 = satellite zenith angle does NOT significantly impact product quality 1 = satellite zenith angle significantly impacts product quality (low quality)

Table 3-3: Cloud Height Failure Codes.

Cloud Height Quality Control Codes	
QC_Flag	**Definition**
0	Good
1	Invalid pixel due to space view
2	Invalid pixel due to being outside of sensor zenith range
3	Invalid earth pixel due to bad data (bad or missing 11mm BT or bad/missing clear sky 11 mm BT)
4	Invalid due to cloud mask being clear or probably clear
5	Invalid due to missing cloud type
6	Failed retrieval

Table 3-4: DCOMP Failure Codes.

DCOMP Quality Control Codes	
QC_Flag	**Definition**
0	Valid, Quality may be degraded due to snow or sea-ice
1	Valid, Quality may be degraded due to twilight conditions
2	Valid, but degraded quality due to twilight conditions (solar zenith between 65 and 82 degree)
3	Invalid due to cloud-free condition
4	Invalid pixel due to being outside of observation range
5	Invalid pixel due to missing input data
6	Invalid pixel, DCOMP attempted but failed retrieval

Table 3-5: Cloud Phase/Type Quality Flags.

NCOMP Control Codes		
Bit	**Quality Flag Name**	**Cause and effect**
Angle restriction flags		
1	QC_CYCLE_VZA	Viewing Zenith Angle >= 72.0
2	QC_CYCLE	Solar Zenith Angle < 82.0
Ancillary Data Flags		
3	QC_CYCLE_NOCLOUD	Cloud Type indicates it is not a cloud
4	QC_CYCLE_CLOUDTYPE	Cloud Type has an unknown value
5	QC_CYCLE_TCLOUD	Cloud Temperature is < 0.0
No Retrieval Flags		
6	QC_MINERR_WATER_0	No retrieval: Minimum error model for water = 0
7	QC_MINERR_ICE_0	No retrieval: Minimum error model for ice = 0
Valid Retrieval Flags		
8	QC__TWILIGHT_	82.0 <= Solar Zenith Angle < 90.0
9	QC_CTWATER_NCOMPICE	Cloud Type = water, NCOMP preferred phase = ice
10	QC_CTICE_NCOMPWATER	Cloud Type = ice, NCOMP preferred phase = water
11	QC_CTMIX_NCOMPWATER	Cloud Type = mixed, NCOMP preferred phase = water
12	QC_CTMIX_NCOMPICE	Cloud Type = mixed, NCOMP preferred phase = ice
13	QC__NCOMPWATER	Cloud Type = supercooled, NCOMP preferred phase = water
14	QC__NCOMPICE	Cloud Type = supercooled, NCOMP preferred phase = ice

Table 3-6: Aerosol Detection Failure Codes.

Aerosol Detection Quality Control Codes

Byte/Bit	Quality flag name	Meaning		
		1bit: 0 (default)	1	
		2bit: 00 (default)	01	11
0	QC_SMOKE_DETECTION	Determined (good)	not Determined(bad)	
1	QC_DUST_DETECTION	Determined(good)	not Determined(bad)	
2-3	QC_SMOKE_CONFIDENCE	Low	Medium	High
4-5	QC_DUST_CONFIDENCE	Low	Medium	High
6	SPARE			
7	SPARE			

Table 3-7: Aerosol Optical Depth Failure Codes.

Aerosol Optical Depth Quality Control Codes			
Byte	**Bits**	**Quality Flag Name**	**Meaning**
1: Input Geometry Quality Flag	0	QC_INPUT_LON	0: valid longitude (-180 - 180°) 1: out-of-range longitude
	1	QC_INPUT_LAT	0: valid latitude (-90 - 90°) 1: out-of-range latitude
	2	QC_INPUT_ELEV	0: valid elevation (-2 – 10 km) 1: out-of-range elevation
	3	QC_INPUT_SOLZEN	0: valid solar zenith (0 - 90°) 1: out-of-range solar zenith
	4	QC_INPUT_SATZEN	0: valid satellite zenith (0 - 90°) 1: out-of-range satellite zenith
	5	QC_INPUT_SOLAZI	0: valid solar azimuth (0 - 180°) 1: out-of-range solar azimuth
	6	QC_INPUT_SATAZI	0: valid satellite azimuth (0 - 180°) 1: out-of-range satellite azimuth
2: Input Ancillary Data Flag	0	QC_INPUT_TPW	00: constant TPW data (2.0 cm) 01: valid TPW data from ABI retrieval (0-20 cm) 10: valid TPW data from model (0-20 cm)
	1		
	2	QC_INPUT_OZONE	00: constant ozone data (0.35 atm-cm) 01: valid ozone data from ABI retrieval (0.0 – 0.7 atm-cm) 10: valid ozone data from model (0.0 – 0.7 atm-cm)
	3		
	4	QC_INPUT__PRES	0: valid model surface pressure (500 – 1500 mb) 1: constant surface pressure (1013 mb)
	5	QC_INPUT_HGT	0: valid model surface height (-2 – 10 km) 1: constant surface height (0 km)
	6	QC_INPUT_WSP	0: valid model surface wind speed (0 – 100 m/s) 1: constant surface wind speed (6 m/s)

	7	QC_INPUT_WDR	0: model surface wind direction (0° - 360°) 1: fixed surface wind direction (90°)
3: Input Reflectance Data Flag	0	QC_INPUT_REFL_CH1	0: valid ABI reflectance in band 1 (0 – 1) 1: out-of-range ABI reflectance in band 1
	1	QC_INPUT_REFL_CH2	0: valid ABI reflectance in band 2 (0 – 1) 1: out-of-range ABI reflectance in band 2
	2	QC_INPUT_REFL_CH3	0: valid ABI reflectance in band 3 (0 – 1) 1: out-of-range ABI reflectance in band 3
	3	QC_INPUT_REFL_CH5	0: valid ABI reflectance in band 5 (0 – 1) 1: out-of-range ABI reflectance in band 5
	4	QC_INPUT_REFL_CH6	0: valid ABI reflectance in band 6 (0 – 1) 1: out-of-range ABI reflectance in band 6
4: Critical Path Flag	0	QC_CLOUD_MASK	0: clear sky 1: cloudy sky
	1	QC_RET_SCENE	0: over-land algorithm is used 1: over-water algorithm is used
	2	QC_LAND_TYPE	0: vegetation 1: soil
	3	QC_LAND_BRISFC	0: dark surface 1: bright surface
	4	QC_LAND_SNOW	0: no snow contamination 1: with snow contamination
	5	QC__WATER_GLINT	0: no sunglint contamination 1: with sunglint contamination
5: AOD Product Quality Flag	0	QC_RET	0: AOD is retrieved 1: AOD is not retrieved
	1	QC_RET_EXTRP	0: interpolation within LUT AOD range 1: extrapolation of AOD used
	2	QC_OUT_SPEC	0: within F&PS specification range 1: out of F&PS specification range
	3	QC_LOWSUN	0: solar zenith angle not larger than 80° 1: solar zenith angle larger than 80°
	4	QC_LOWSAT	0: local zenith angle not larger than 60^{o} 1: local zenith angle larger than 60^{o}

Table 3-8: Volcanic Ash Detection Quality Flags.

Volcanic Ash Detection Quality Control Codes			
Byte	**Bit**	**Name**	**Values**
1	**1**	Overall QF	0 – High Quality **1 – Low Quality**
1	**2**	Invalid Data QF	0 – High Quality **1 – Low Quality**
1	**3**	Local Zenith Angle QF	**0 – High Quality** 1 – Low Quality
1	**4-6**	Ash Single Layer Confidence QF	0 – High

			1 – Moderate 2 – Low 3 – Very Low **4 – Not-Ash**
1	**7-8**	Spare	n/a
2	**1-3**	Ash Multi Layer Confidence QF	0 – High 1 – Moderate 2 – Low 3 – Very Low **4 – Not-Ash**

Table 3-9: Volcanic Ash Retrieval Quality Flags.

Volcanic Ash Retrieval Quality Control Codes			
Byte	**Bit**	**Name**	**Values**
1	**1-2**	Retrieval Status	0 - Successful 1 - Failed 2 - Not Attempted
1	**3-4**	T_{cld} QF	0 – High Quality 1 – Medium Quality 2 – Low Quality
1	**5-6**	ε_{cld} QF	0 – High Quality 1 – Medium Quality 2 – Low Quality
1	**7-8**	β(12/11μm) QF	0 – High Quality 1 – Medium Quality 2 – Low Quality
2	**1-4**	Ash Particle Size	0 – < 2 µm 1 – ≥2 – < 3 µm 2 – ≥3 – < 4 µm 3 – ≥4 – < 5 µm 4 – ≥5 – < 6 µm 5 – ≥6 – < 7 µm 6 – ≥7 – < 8 µm 7 – ≥8 – < 9 µm 8 – ≥9 – < 10 µm 9 – ≥ 10 µm 10 - invalid

Table 3-10: Snow Cover Retrieval Quality Flags.

Snow Cover Retrieval Quality Control Codes	
Bit	**Name** **Values**

0	no-data value in band data
1	missing data in band data
2	modeled cloudy
3	water
4	solar zenith angle less than 0 or greater than MAX_SOLAR_ZENITH_ANGLE
5	sensor zenith angle less than 0.0 or greater than MAX_SENSOR_ZENITH_ANGLE
6	bad metadata or ancillary data
7	N/A

Table 3-11: Ice Concentration Retrieval Quality Flags.

Ice Concentration Retrieval Quality Control Codes		
Quality Flag Name	**Variable Type**	**Definition**
QC_Flags	LONG	Quality Control Flags
Tot_QACat01	LONG	Total number of pixels with QA category 1 (Normal or optimal)
Tot_QACat02	LONG	Total number of pixels with QA category 2 (Uncertain or suboptimal)
Tot_QACat03	LONG	Total number of pixels with QA category 3 (Non-retrievable)
Tot_QACat04	LONG	Total number of pixels with QA category 4 (Bad data)

Table 3-12: Ice Thickness And Age Retrieval Quality Flags.

Ice Thickness And Age Retrieval Quality Control Codes		
Quality Flag Name	**Variable Type**	**Definition**
QC_Flags	LONG	Quality Control Flags
Tot_QACat01	LONG	Total number of pixels with QA category 1 (Normal or optimal)
Tot_QACat02	LONG	Total number of pixels with QA category 2 (Uncertain or suboptimal)
Tot_QACat03	LONG	Total number of pixels with QA category 3 (bad or missing)

Tot_QACat04	LONG	Total number of pixels with QA category 4 (Non-retrievable)

No external product tools are supplied. External users can choose their own tools to display and analyze these output files.
