

Vehicle Network Application based on BeiDou/GPS

International Committee on
Global Navigation Satellite Systems

NavInfo Co., Ltd.

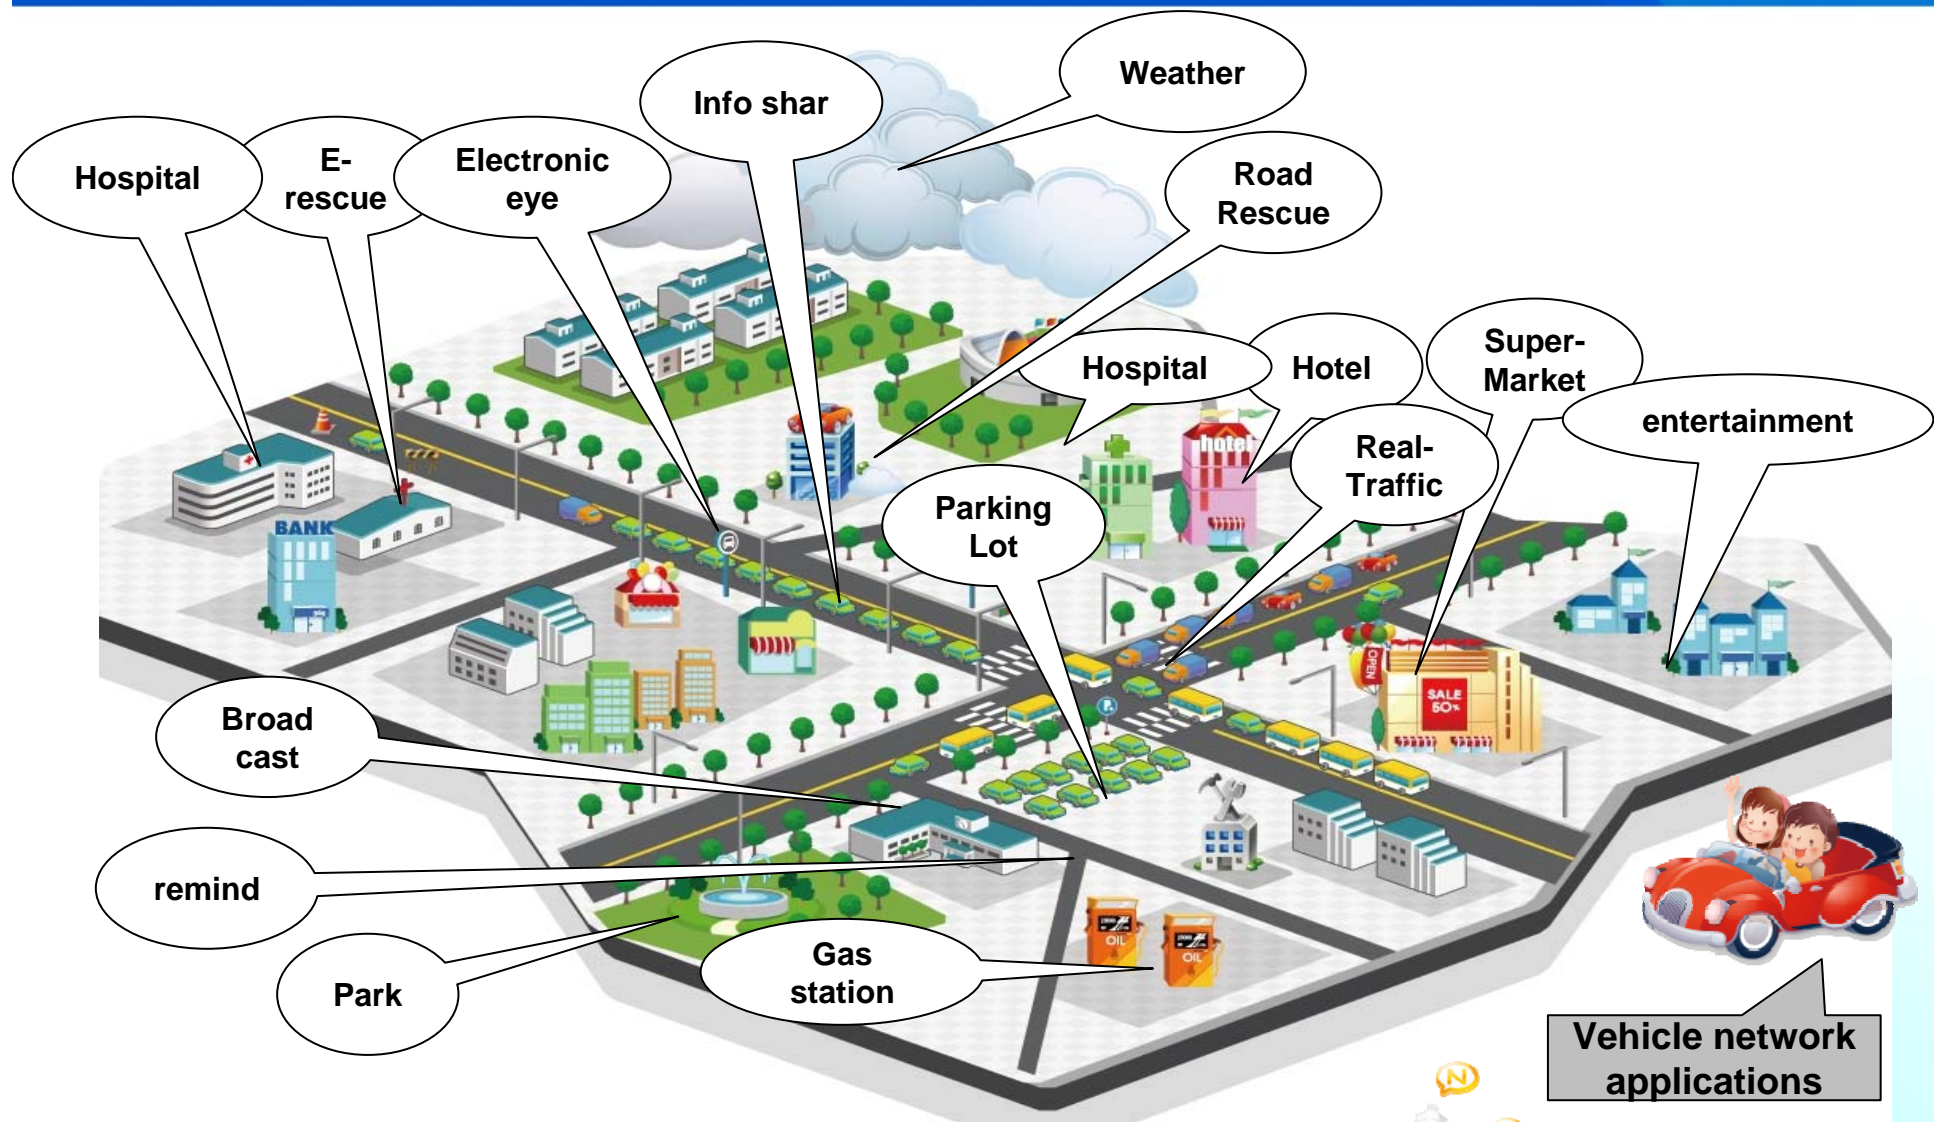

President Dr. Sun Yuguo

Nov. 2012

- **The current statuses of vehicle network industry**
- **Cloud platform of vehicle network service**
- **Conclusion**

Vehicle Network Applications

Global Market Situation of Vehicle Network

Cumulative increase in the number of the car with vehicle network systems

The rapid growth of the global vehicle network solutions

- Till 2011 the applications market scale of vehicle network reached **423.13 Billion**
- 2012, The loading rate of vehicle network system in the developed countries is more than **25%**
- Till 2025, there is expected to have more than **100 Million** vehicles equipped vehicle network system

The market of China vehicle network grows rapidly

More and more car makers and system vendors begin the development or application of vehicle network services

- In 2011, China vehicle network market scale reached **6.02 Billion RMB**, the year-on-year growth rate is **31.7%**, and took the **1.4%** share of the international market
- In 2012, it is expected that about **3%** equipped with vehicle network service
- Expected in 2015, nearly **10%** of the cars will be installed with vehicle network services

Higher requests on positioning technology

BeiDou industrialization drives the development

BeiDou and GPS, the dual system will make the positioning more accurate, the system running more stable; will promote the development and wider use of vehicle network industry.

- The current statuses of vehicle network industry

- Conclusion

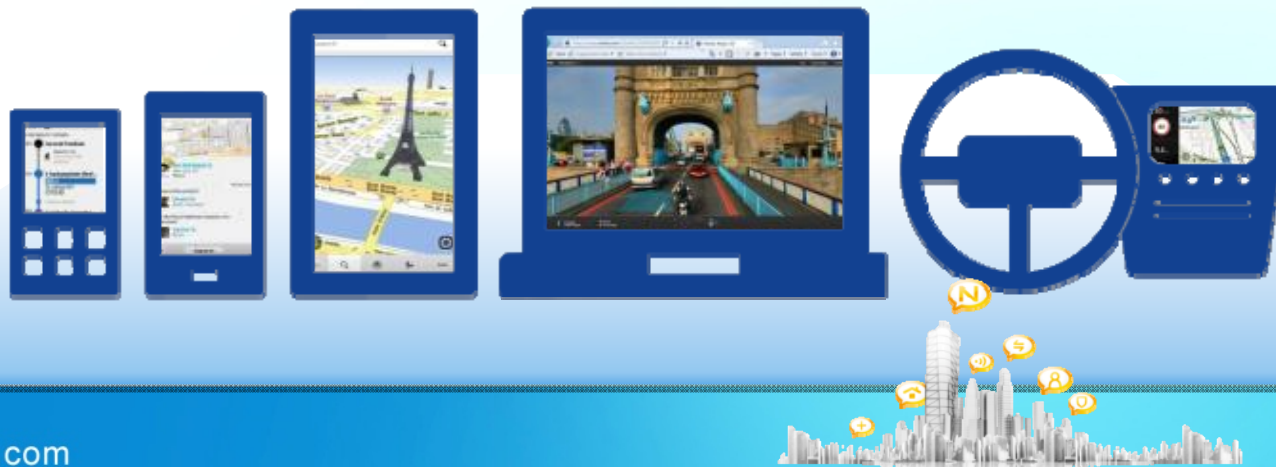

Cloud platform of vehicle network service

NAVINFO
四维图新

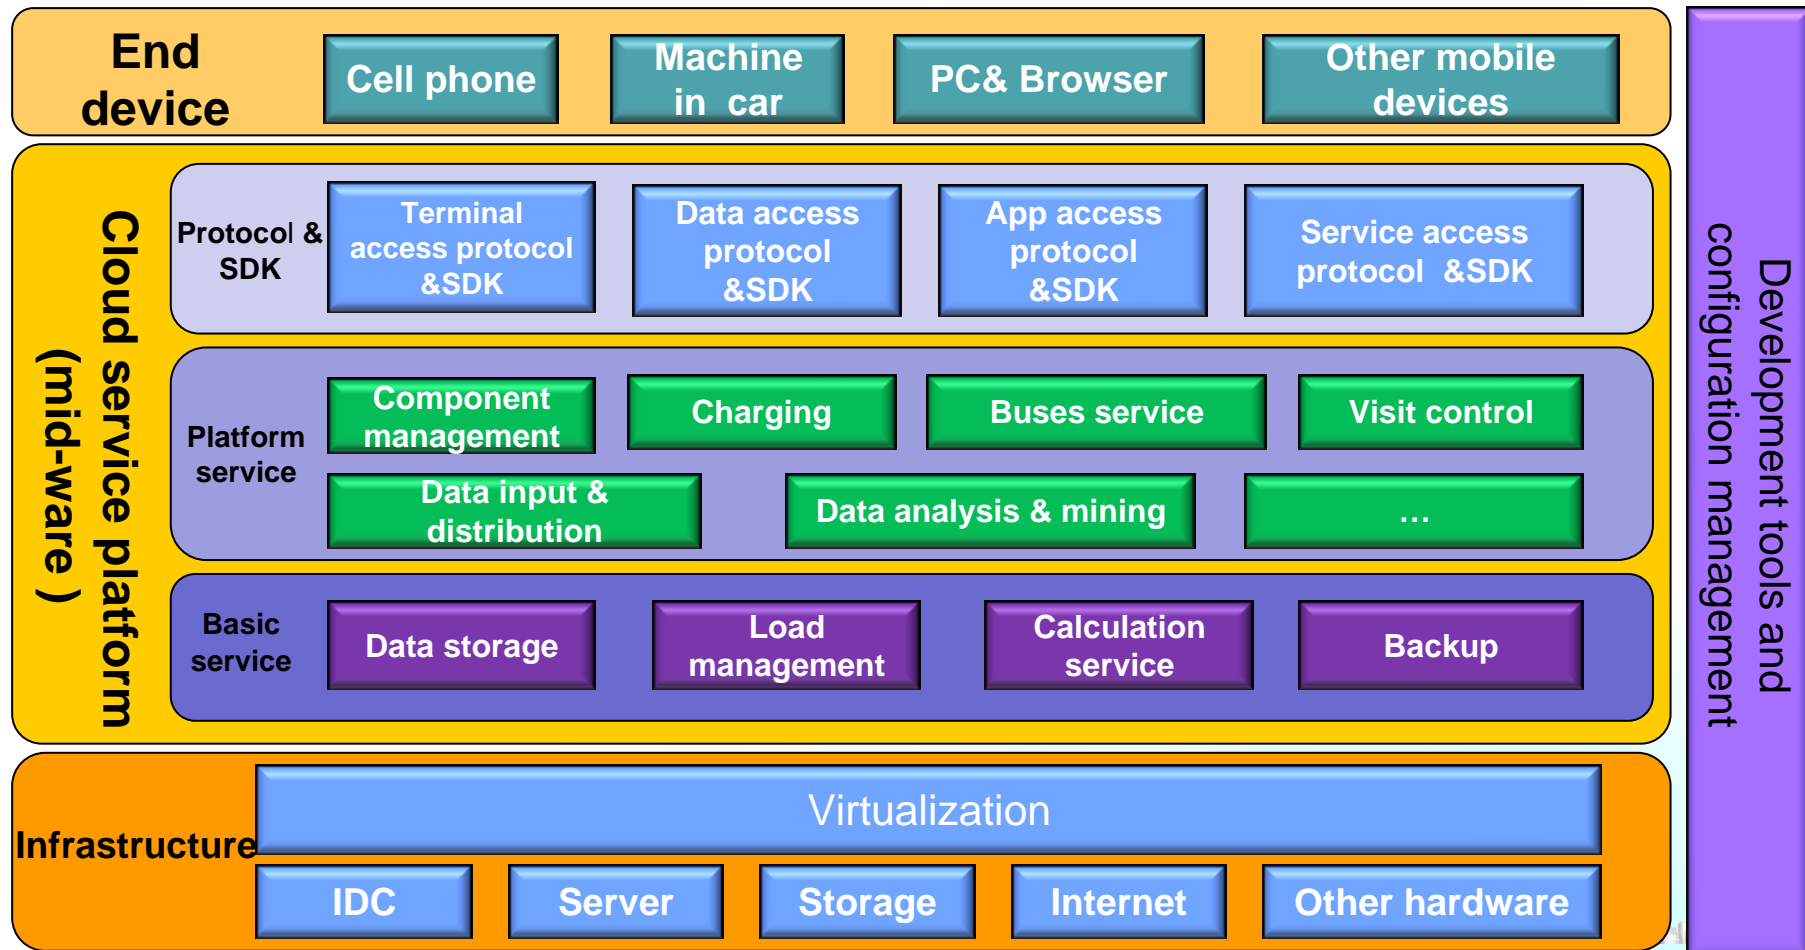

The open and modular Cloud platform of vehicle network service

NAVINFO
(SSE stock code : 002405)

www.navinfo.com

Cloud structure of vehicle network service

- Infrastructure will be constructed in unit form
- Infrastructure unit will be constructed in accordance with the regions (Beijing, Shanghai, Guangzhou, Chengdu) gradually.

The open three-layer service protocol standard

- Data access and distribution based on location
- Content, such as news, access and distribution
- Service access and distribution
- APP access and distribution

Open and modular service Cloud platform

Cloud mid-ware

- Cloud services middleware achieves high-quality Cloud service system with high concurrency, high access and distribution

Open data access and distribution

- Multi-source data access and technology integration system
- Evaluation system of data credibility
- Evaluation system of service Quality

Open public component library

- Basic services component library
- Business services component library
- Third-party distribution components library

Global cooperation

Security & Safe

Living & Information

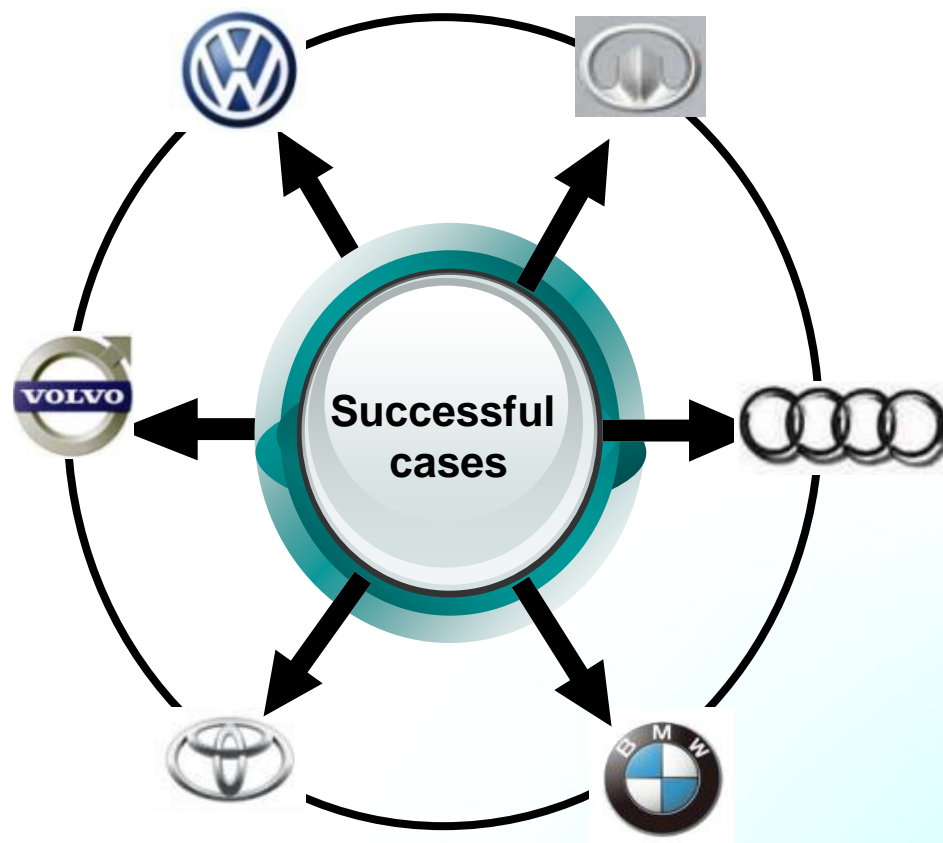

Interaction & share

Secretary service

Navigation Service

Voice Service

Tier1 role::

- 1) Development of full set of T service
 - Backend, Mobile App, Web Portal
 - Content integration and service delivery
 - Call Center Client Website
- 2) System integration, operation and maintenance
- 3) Co-operation

Tier2 role::

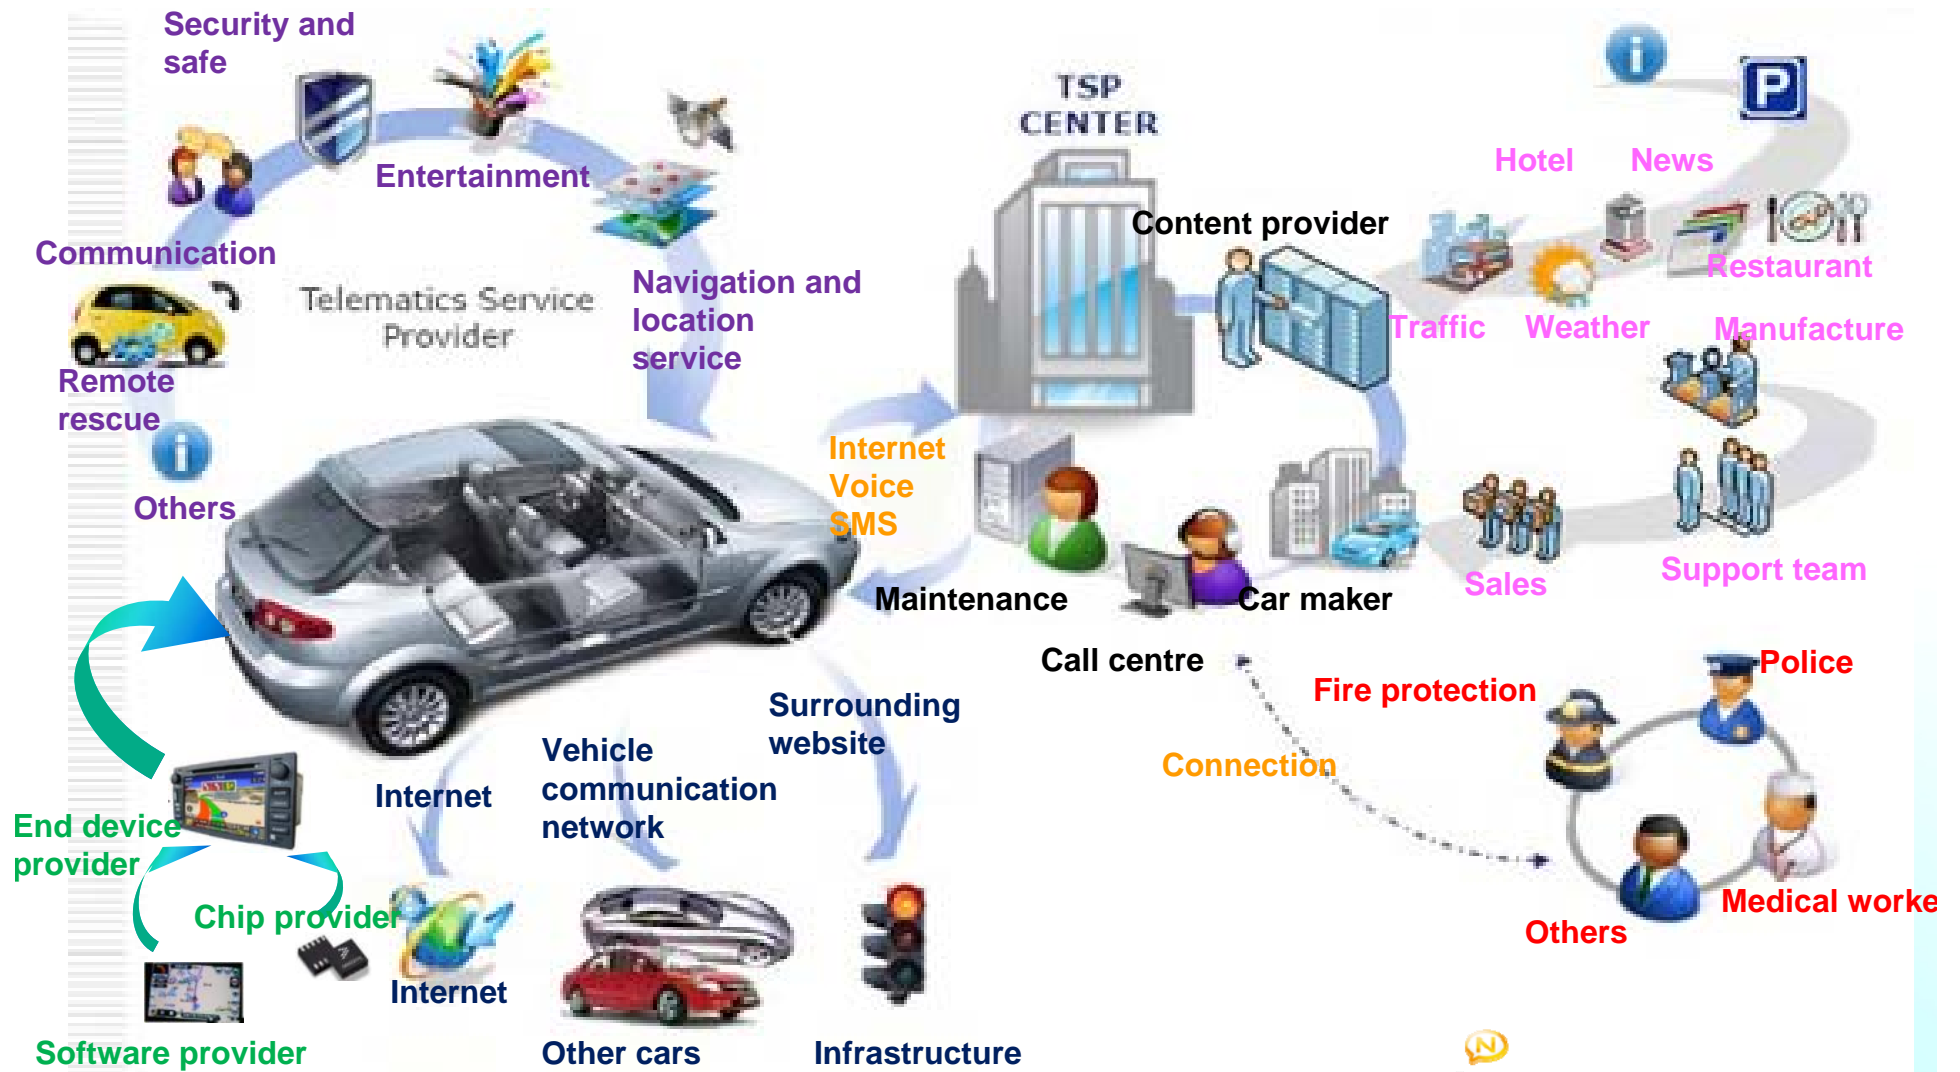

Provide GIS service and some content service

- POI online searching
- Online map service
- Geocoding and reverse geocoding service
- SendToCar service

...

Close cooperation among different parties

Conclusion...

1. Vehicle network market is growing rapidly in China and has huge potential;
2. BeiDou and GPS, the dual system will make positioning more accurate and system more stable; and will promote the development and wider use of vehicle network industry;
3. Hope to strengthen international cooperation and industrial chain based on the Cloud platform of vehicle network and to jointly develop the China market

Thank you!
