              Severe, Fire, Public and Winter Weather Services Branch

Subject: Updated: Soliciting Comments until April 30, 2024 on the  
Continuation of the Probabilistic Winter Precipitation Forecast Experiment

Updated to extend the comment period through April 30, 2024.

The National Weather Service (NWS) is soliciting comments until April 30, 2024 on the Probabilistic Winter Precipitation Forecast Experiment. The experiment will be extended for additional comment and review this winter at the same 77 Weather Forecast Offices (WFOs) in the continental U.S. that participated last season. There are no changes to the experiment for the 2023-2024 season.

Please submit comments to:

[https://www.surveymonkey.com/r/WinterWeatherProbabilisticExperiment\\_2023-2024](https://www.surveymonkey.com/r/WinterWeatherProbabilisticExperiment_2023-2024)

Comments and feedback will help inform a proposal to implement a version of these graphics, available at all applicable NWS offices. Graphical and tabular products show the low end amount, the official forecast or expected amount, and the high end snow amount that a storm is likely to produce. Examples of these products and a list of participating offices can be viewed at:

[https://nsdesk.servicenowservices.com/api/g\\_noa/nwspc/res2/b78c74b31balf990135feb9ce54bcbbf](https://nsdesk.servicenowservices.com/api/g_noa/nwspc/res2/b78c74b31balf990135feb9ce54bcbbf)

Narrow ranges between the minimum and maximum snowfall totals indicate high forecast certainty, while large ranges between minimum and maximum totals indicate low forecast certainty.
