From:         Terrance J. Clark, Director  
              NWS WSR-88D Radar Operations Center

Subject: Updated: Weather Surveillance Radar-1988 Doppler (WSR-88D)  
RDA/RPG Build 23.0 Beta Test to Begin the Week of August 25, 2024

Updated to reflect changes in testing dates and sites as detailed below.

Beginning the week of August 25, 2024, the Radar Operations Center (ROC) will start the Build 23.0 Beta Test for the Radar Data Acquisition (RDA) and Radar Product Generator (RPG).

RDA/RPG Build 23.0 will be installed at six WSR-88D sites according to the following tentative schedule:

KCCX - State College, PA: Week of August 25, 2024  
PAHG - Kenai, AK: Week of August 25, 2024  
KRGX - Reno, NV: Week of September 8, 2024  
KOAX - Omaha, NE: Week of September 8, 2024  
KDYS - Dyess Air Force Base (AFB), TX: Week of September 15, 2024  
KSJT - San Angelo, TX: Week of September 15, 2024

Deployment of RDA/RPG Build 23.0 is scheduled to begin in late November 2024. Highlights of Build 23.0 include:

1. New supplemental low elevation angle for:  
    KDOX - Dover, DE: +0.3 degree  
    KEVX - Eglin AFB, FL: +0.3 degree
2. New Long Pulse Volume Coverage Pattern (VCP) 34. With VCP 34, radar operators may implement one Supplemental Adaptive Intra-Volume Low-Level Scan (SAILS) to provide more frequent low-level updates. Additional information on VCP 34 is available on the Radar Techniques page:

<https://www.roc.noaa.gov/radar-techniques.php>

3. Multi-PRF Dealiasing Algorithm (MPDA) option for VCPs 212 and 215. Radar operators will have the ability to use MPDA on the lowest one or two elevations for VCPs 212 and 215 to improve velocity data.

Draft Interface Control Documents (ICDs) are located at:
