Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

OKLAHOMA, Western, Central and Southeast

(OK-Z004) HARPER, (OK-Z005) WOODS, (OK-Z006) ALFALFA, (OK-Z007) GRANT, (OK-Z008) KAY, (OK-Z009) ELLIS, (OK-Z010) WOODWARD, (OK-Z011) MAJOR, (OK-Z012) GARFIELD, (OK-Z013) NOBLE, (OK-Z014) ROGER MILLS, (OK-Z015) DEWEY, (OK-Z016) CUSTER, (OK-Z017) BLAINE, (OK-Z018) KINGFISHER, (OK-Z019) LOGAN, (OK-Z020) PAYNE, (OK-Z021) BECKHAM, (OK-Z022) WASHITA, (OK-Z023) CADDO, (OK-Z027) GRADY, (OK-Z033) HARMON, (OK-Z034) GREER, (OK-Z035) KIOWA, (OK-Z036) JACKSON, (OK-Z037) TILLMAN, (OK-Z038) COMANCHE, (OK-Z039) STEPHENS, (OK-Z041) MURRAY, (OK-Z044) COTTON, (OK-Z045) JEFFERSON, (OK-Z046) CARTER, (OK-Z047) JOHNSTON, (OK-Z050) LOVE, (OK-Z051) MARSHALL

	05/01/13 00:00 CST	0	Drought
	05/31/13 23:59 CST	0	

Some rainfall events occurred during May, but with a heavy bias toward central Oklahoma near the I-35 corridor, where drought conditions continued to improve. Drought was eliminated for the first time since June 2012 in and around the Oklahoma City metro area, extending southeast toward Ada and Atoka. However, extreme to exceptional drought persisted over much of western Oklahoma, including some worsening along the border with the Texas Panhandle.

KIOWA COUNTY --- ROOSEVELT [34.85, -99.02]

	05/01/13 14:40 CST	0	Hail (1.75 in)
	05/01/13 14:40 CST	0	Source: Other Federal Agency

Reported via nssl Shave Project.

KIOWA COUNTY --- ROOSEVELT [34.85, -99.02]

	05/01/13 14:54 CST	0	Hail (1.75 in)
	05/01/13 14:54 CST	0	Source: Amateur Radio

KIOWA COUNTY --- ROOSEVELT [34.85, -99.02]

	05/01/13 14:58 CST	0	Thunderstorm Wind (EG 52 kt)
	05/01/13 14:58 CST	0	Source: Amateur Radio

Estimated by amateur radio operator.

KIOWA COUNTY --- ROOSEVELT [34.85, -99.02]

	05/01/13 15:00 CST	0	Hail (1.75 in)
	05/01/13 15:00 CST	0	Source: Amateur Radio

Pea to golfball size hail fell from 1500-1530 CST.

KIOWA COUNTY --- 1.8 NE COLD SPRINGS [34.82, -98.98]

	05/01/13 15:14 CST	0	Hail (1.75 in)
	05/01/13 15:14 CST	0	Source: Trained Spotter

TILLMAN COUNTY --- MANITOU [34.51, -98.98]

	05/01/13 15:54 CST	0	Hail (1.00 in)
	05/01/13 15:54 CST	0	Source: Trained Spotter

TILLMAN COUNTY --- 0.6 E FREDERICK [34.39, -99.01]

	05/01/13 15:58 CST	0	Hail (1.00 in)
	05/01/13 15:58 CST	0	Source: Amateur Radio

A strong cold front pushed through the southern Plains during the day. Ahead of the front, thunderstorms developed in an environment of moderate to strong instability and weak deep-layer wind shear. These storms produced numerous reports of marginally-severe hail and a few damaging wind gusts.

HARPER COUNTY --- 3.9 NE LAVERNE [36.75, -99.85]

	05/07/13 18:04 CST	0	Hail (1.00 in)
	05/07/13 18:04 CST	0	Source: Trained Spotter

WOODWARD COUNTY --- 7.8 ESE MUTUAL [36.19, -99.04]

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/07/13 21:10 CST		0	Thunderstorm Wind (MG 59 kt)
	05/07/13 21:10 CST		0	Source: Mesonet
Modest instability and moisture existed beneath moderately strong wind shear, allowing for high-based supercells to form over parts of the southern High Plains during the late afternoon. While most of the activity remained in Kansas, a lone cell developed over the far eastern Oklahoma Panhandle and tracked eastward through portions of northwest Oklahoma. A severe hail report was received near Laverne.

A dryline was located from western Kansas through the Texas Panhandle during the afternoon, with a moist, unstable airmass in place over Oklahoma as a shortwave trough approached. Numerous thunderstorms developed during the mid- to late-afternoon hours over much of western and central Oklahoma, with some displaying supercell characteristics at times. Widespread large hail was reported,

	05/09/13 17:47 CST		0	Hail (1.00 in)
	05/09/13 17:47 CST		0	Source: Trained Spotter
Accompanied by heavy rain.				
A weak frontal boundary was quasi-stationary near the I-40 corridor through the day, with moist and unstable air to its south. Several rounds of thunderstorms occurred throughout the afternoon and evening across the southern half of Oklahoma. Most were sub-severe, due to weak deep-layer wind shear, but a few produced marginally-severe hail.				
CARTER COUNTY --- RATLIFF CITY [34.45, -97.51]				
	05/15/13 13:26 CST		0	Hail (1.00 in)
	05/15/13 13:26 CST		0	Source: Post Office

One trailer collapsed and had its roof blown off at Sandy Creek Trailer Park. Seven other trailers also were damaged.				

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
PONTOTOC COUNTY --- 2.7 NW STONEWALL [34.68, -96.56]				
	05/15/13 17:45 CST		70K	Thunderstorm Wind (EG 56 kt)
	05/15/13 17:45 CST		0	Source: Amateur Radio
A dozen power lines were downed, along with large tree limbs. Time estimated from radar.				
A weak upper-level low was centered over western Oklahoma, with moderately moist and unstable air in place over central and southern Oklahoma. Combined with substantial low-level shear, this allowed supercells to develop during the mid-afternoon hours, generally along and southeast of the I-44 corridor. A few hail reports were received, along with one tornado near Ada.				
HARMON COUNTY --- 3.4 W GOULD [34.67, -99.83]				
	05/18/13 04:50 CST		0	Thunderstorm Wind (MG 60 kt)
	05/18/13 04:50 CST		0	Source: Mesonet
Mesonet station at Hollis reported a gust to 69 mph.				
Decaying thunderstorms over the Texas Panhandle moved into far southwest Oklahoma during the early morning hours of the 18th, resulting in severe wind gusts in Harmon County.

	05/18/13 22:50 CST		0	Source: Mesonet
<p>A classic late Spring severe weather setup unfolded over the southern Plains. Rich low-level moisture and very warm temperatures contributed to high instability, while an incoming shortwave trough yielded deep-layer shear sufficient for supercells during the afternoon. Owing to the large spread between surface temperatures and dew points over most of Oklahoma, tornadoes did not occur, but significant hail was common with the storms early in their life cycles over far western Oklahoma. Later in the evening, storm outflows consolidated in some cases to produce more linear convection, transitioning the reports toward severe wind gusts farther east.</p>

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
OKLAHOMA COUNTY --- 1.8 S EDMOND [35.62, -97.48], 2.1 WSW ARCADIA LAKE [35.64, -97.41]				
	05/19/13 15:22 CST	0		Tornado (EF1, L: 4.50 mi , W: 900 yd)
	05/19/13 15:30 CST	0		Source: NWS Storm Survey
A tornado touched down in Edmond just northwest of 33rd Street and Boulevard Street. The tornado moved east just north of 33rd Street causing primarily EF0 damage, primarily to trees. The tornado turned northeast just before crossing Interstate 35 with isolated EF1 damage beginning just west of Interstate 35. One home north of E 15th Street and east of Interstate 35 suffered significant roof damage just before the tornado dissipated north of 15th Street and Air Depot Blvd.				
OKLAHOMA COUNTY --- 0.5 ENE ARCADIA LAKE [35.65, -97.36], 1.0 ENE ARCADIA LAKE [35.65, -97.35]				
	05/19/13 15:33 CST	0		Tornado (EF1, L: 0.54 mi , W: 200 yd)
	05/19/13 15:34 CST	0		Source: NWS Storm Survey
A brief tornado was observed just northeast of Lake Arcdia. The tornado damaged a power pole along Post Road just north of State Highway 66, otherwise no known damage occurred.				
OKLAHOMA COUNTY --- 3.6 NW ARCADIA LAKE [35.69, -97.41]				
	05/19/13 15:37 CST	0		Hail (2.60 in)
	05/19/13 15:37 CST	0		Source: Public
OKLAHOMA COUNTY --- 3.3 NW LUTHER [35.69, -97.23], 4.9 NNE LUTHER [35.72, -97.15]				
	05/19/13 15:41 CST	0		Tornado (EF2, L: 5.00 mi , W: 1000 yd)
	05/19/13 15:54 CST	0		Source: NWS Storm Survey
A tornado touched down just south of Triple XXX Road and Coffee Creek Road to the northwest of Luther and began to move east-northeast. The tornado began producing EF2 damage soon after crossing Luther Road where an outbuilding was destroyed. At least two mobile homes were destroyed as the tornado continued to the east-northeast. The tornado crossed Waterloo Road and moved into Logan County.				
OKLAHOMA COUNTY --- 3.5 N LUTHER [35.71, -97.18]				
	05/19/13 15:51 CST	0		Hail (2.75 in)
	05/19/13 15:51 CST	0		Source: Public
LOGAN COUNTY --- 9.7 SE MERIDIAN [35.72, -97.15], 9.8 SE MERIDIAN [35.73, -97.14]

	05/19/13 15:56 CST	0		Source: NWS Storm Survey
Tornado continued tracking ENE, producing tree damage as it clipped the extreme southeast corner of Logan County before moving into Lincoln County.				
GRADY COUNTY --- 3.1 ENE MIDDLEBERG [35.13, -97.69]				
	05/19/13 15:55 CST	0		Hail (2.00 in)
	05/19/13 15:55 CST	0		Source: Public
LINCOLN COUNTY --- 1.8 SW FALLIS [35.73, -97.14], 2.8 SE TRYON [35.85, -96.92]				
	05/19/13 15:56 CST	0		Tornado (EF3, L: 15.00 mi , W: 1200 yd)
	05/19/13 16:24 CST	0		Source: NWS Storm Survey
The large tornado continued to move northeast from Logan County into Lincoln County. The tornado passed just southeast of Fallis and then clipped the southeastern portion of Carney. It produced EF3 damage to a number of homes from just south of Carney into the southeast portion of the town. The tornado finally dissipated about 3 miles southeast of Tryon. Motions observed visually in this tornado suggest that the tornado was likely stronger than EF3 in western Lincoln County, but no damage indicators were available that would have supplied a rating higher than EF3 in this area.

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

The large tornado moved east-northeast into Pottawatomie County then curving northeast as it approached State Highway 102. The tornado moved through a mobile home park north of Independence Road after crossing State Highway 102. Just northeast of the mobile home park, a permanent home was destroyed with much of the debris blown well to the northeast. It continued northeast crossing Interstate 40 near the intersection of US-177, then curved north-northeast finally dissipating near Wolverine Road and Coker Road. One fatality occurred in the mobile home park, and another man was killed in his vehicle.

Direct Fatalities: M79MH, M76VE

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A moist and very unstable airmass was in place over the eastern two thirds of Oklahoma, to the east of a dryline. Additionally, strong wind shear was present as a mid-level jet streak carved into the southern Plains. Several supercells developed along the dryline during the mid and late afternoon hours, producing large hail. Two supercells in central Oklahoma also produced tornadoes, including a few significant, damaging tornadoes.

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>The violent Newcastle-Moore tornado moved into Cleveland County from McClain County as it moved northeast across the Canadian River near Interstate 44. The tornado then turned more east and then east-northeast after crossing Interstate 44. Violent EF4 damage was again observed as it began to move into progressively higher density residential areas approaching May Avenue.</p> <p>The center of the large tornado path passed near SW 149th Street and Western Avenue. After crossing Western Avenue, numerous buildings were destroyed and horses killed at Orr Family Farm. Two storage tanks estimated to weigh approximately 10 tons were lifted from Orr Family Farm and landed about one-half mile east. Moving east, the tornado destroyed much of Briarwood Elementary School, where the NWS storm survey team rated damage as EF5. Despite the destruction of this elementary school during school hours, no fatalities occurred at the school. As the tornado continued to move east and east-northeast, it moved through much more densely populated suburban neighborhoods of southwest Oklahoma City and Moore where violent destruction was widespread. The width of EF4 and greater damage was up to 250 yards wide as the tornado moved through neighborhoods east of Western Avenue. The first two fatalities occurred in a house in the neighborhood just east of Briarwood Elementary, with another fatality in a house as the tornado approached Santa Fe Avenue.</p> <p>After crossing Santa Fe Avenue, the tornado moved through more suburban neighborhoods and toward Plaza Towers Elementary School. Damage to the school was extensive and seven children were killed when a wall collapsed at the school. Nine other people were killed in eight different neighborhood homes within one-quarter mile of Plaza Towers Elementary, most occurring just south of the school.</p> <p>The tornado turned northeast as it approached Telephone Road, made a loop near the intersection of Telephone Road and 4th Street, then moved southeast crossing the interstate. Three people were killed when a convenience store along Telephone Road was destroyed. Crossing Telephone Road, the tornado inflicted significant damage to the Moore Medical Center, a post office and numerous businesses along Telephone Road and Interstate 35. Although the tornado was more narrow after crossing Interstate 35, it continued to produce EF4 damage in neighborhoods east of the interstate as it curved east and then again east-northeast. One fatality occurred at a business just east of the interstate, and one final fatality occurred in a home between Eastern Avenue and Bryant Avenue. Consistent EF4 damage continued until the tornado passed SE 4th Street just east of Bryant Avenue. Moving east from Bryant, the tornado continued to produce EF2 damage with isolated EF4 damage noted. The density of housing also decreased east of Bryant as the tornado moved east and east-northeast before dissipating east of Air Depot Blvd. between SE 119th Street and SE 134th Street in southeast Oklahoma City.</p> <p>Overall, over 300 homes experienced EF4/EF5 damage along the tornado path.</p> <p>Direct Fatalities: M63BU, F38PH, F45PH, F40PH, F70PH, F7PH, F4PH, F49PH, F51PH, M46PH, M54PH, M65PH, M39PH, F90PH, F29PS, F49PS, M0PS, F9SC, F9SC, F9SC, F9SC, M8SC, M9SC, M9SC</p>

<p>A tornado outbreak occurred during the afternoon and evening hours of the 20th. Several tornadoes occurred from central Oklahoma down through south central Oklahoma near the Red River. The strongest tornado touched down near Newcastle and traveled through Moore and south Oklahoma City. This tornado caused catastrophic damage in these areas, with a maximum rating of EF-5. The tornado claimed 24 lives and caused billions of dollars in damage. In addition to the tornadoes, large hail and damaging winds cause damage in many areas.</p>

Water over road at S Highway 9 and 36th Ave SE in Norman. No damage reported.				
Moderate northwest flow aloft existed over Oklahoma, with a diffuse frontal boundary extending west-east across the center of the state. Elevated thunderstorms developed in the early morning before sunrise, primarily near the I-35 corridor, and trained over a region roughly extending from Kingfisher to Durant. Damaging winds and marginally severe hail were reported, along with some flash flooding.

<p>A large upper trough was ejecting out of the Rockies, with a dryline extending from western Nebraska through the Texas Panhandle. Strong wind shear and instability were in place over the southern Plains. Supercells developed along the dryline during the early to mid afternoon, then progressed eastward into western Oklahoma, producing hail, wind and isolated tornadoes. Additional severe thunderstorms developed farther east over western and central Oklahoma during the mid to late afternoon, with severe wind and hail reported.</p>

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

On 31 May, an intense, long-track tornado formed southwest of El Reno. This exceptionally wide tornado took a complex path, rapidly changing in both speed and direction. The tornado spared El Reno and its airport from a direct hit, tracking just south of those locations. The tornado damaged numerous homes along with a few businesses near El Reno. Additionally, intense sub-vortices destroyed crops in numerous fields in the area.

The tornado developed at 6:03 p.m. just northeast of the intersection of Heaston and Reuter roads. Initially, the tornado moved to the southeast at 20 to 25 mph. At 6:09 p.m., the tornado turned to the east, just south of Reno Road between Heaston and Brandley roads. The tornado continued to expand in size just southwest of the El Reno Municipal Air Park, where its speed increased to 30 to 40 mph. As the tornado passed just south of the airport, two satellite tornadoes formed briefly on the west side of the tornado.

At 6:19 p.m. the tornado crossed Highway 81 near Reno Road as it continued to expand in size. There, the tornado abruptly turned to the north, while also accelerating to greater than 50 mph. From 6:24 to 6:26 p.m., the tornado reached its maximum in size and intensity near the intersection of Radio and Reuter roads. The tornado, still very large, slowed down as it approached I-40. From 6:27 to 6:35 the tornado made a loop just north of the interstate while decelerating to less than 10 mph. After 6:35, the tornado moved east once again, and dissipated at 6:42 p.m. near the intersection of I-40 and Banner Road.

Eight people were killed in the tornado, all in vehicles. This included three severe storm researchers who were killed east of US-81 as the tornado overtook their position. Additionally, several other people were killed while attempting to escape the tornado near Highway 81. Finally, two people were killed along I-40 while waiting for the storm to pass.

The monetary damages were estimated. This tornado was well sampled by two separate mobile research radar teams – the University of Oklahoma RaXPol radar, and the Center for Severe Weather Research's Doppler on Wheels. Both radars captured high temporal and spatial resolution data relatively close to the large tornado. Both radars measured winds in the tornado of more than 200 mph. The RaXPol radar data shows winds of at least 295 mph very close to the surface. These intense winds were present in very small sub-vortices within the larger tornado circulation. An analysis of the high resolution radar data combined with the results of the ground damage survey indicates that none of these intense sub-vortices impacted any structures in rural Canadian County. So despite the measured wind speeds, surveyors could not find any damage that would support a rating higher than EF3 based solely on the damage indicators used with the EF scale.

The maximum tornado width was 2.6 miles. However, the damaging wind swath was much larger, as non-tornadic downdraft winds extended for at least a mile south of the tornado. Given the difficulty of separating this damage from tornadic damage, the OU RaXPol radar was used to help determine the width.

Direct Fatalities: M67VE, M35VE, F26VE, M0VE, M32VE, M55VE, M24VE, M45VE

COMANCHE COUNTY --- GERONIMO [34.48, -98.38]

05/31/13 17:10 CST	0	Hail (2.00 in)

Storm Data and Unusual Weather Phenomena - May 2013

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/31/13 18:00 CST		0	Thunderstorm Wind (EG 83 kt)
	05/31/13 18:30 CST		0	Source: NWS Storm Survey

Wind damage was widespread across southwest Oklahoma City as the tornadic storm produced several surges of intense winds as it moved across the area. The damage was widespread from County Line Road from SW 29th and SW 44th Streets, southeastward across Will Rogers World Airport to along SW 89th Street between Portland Avenue and Pennsylvania Avenue. An outbuilding was destroyed at Western Heights High School near SW 44th Street and Council Road with winds estimated at 95 mph. Winds gusts of 61 knots (70 mph) were measured at 7:05 pm CDT at the Will Rogers Airport (OKC) ASOS with one of these surges, followed by another gust of 62 knots (71 mph) with a second surge at 7:21 pm CDT.

OKLAHOMA COUNTY --- (OKC)WILL ROGERS APT [35.39, -97.60]				
	05/31/13 18:05 CST		0.10M	Thunderstorm Wind (MG 61 kt)
	05/31/13 18:05 CST		0	Source: ASOS

The wind gusts were caused by rear flank downdraft winds near an associated tornadic circulations. Considerable damage occurred to the ASOS, including full removal from static platform. Widespread damage to trees and a few buildings on the Will Rogers World Airport grounds. Damages estimated.

Water over a bridge on Dobbs Rd. north of NE 93rd St. One fatality occurred when a car was swept off the road in the floodwaters. No other injuries were reported. Damage estimated.

Direct Fatalities: M65VE

A tornado outbreak occurred during the late afternoon and early evening hours of the 31st. A stalled front and deeply mixed dryline served as a focus for thunderstorm development. The front/dryline triple point was where the most intense supercells initiated. These storms traveled eastward, eventually impacting the Oklahoma City metropolitan area. Several tornadoes occurred, including the El Reno tornado, which unfortunately claimed several lives. In addition to the tornado, very large hail and heavy rains led to flash flooding in

	05/18/13 19:56 CST	0		Hail (1.50 in)
	05/18/13 19:56 CST	0		Source: Emergency Manager
A classic late Spring severe weather setup unfolded over the southern Plains. Rich low-level moisture and very warm temperatures contributed to high instability, while an incoming shortwave trough yielded deep-layer shear sufficient for supercells during the afternoon. A couple supercells moved northeast over western north Texas during the early evening hours, producing severe hail and wind.
