NOAA TECHNICAL REPORTS

National Weather Service Series

The National Weather Service (NWS) observes and measures atmospheric phenomena; develops and distributes forecasts of weather conditions and warnings of adverse weather; collects and disseminates weather information to meet the needs of the public and specialized users. The NWS develops the national meteorological service system and improves procedures, techniques, and dissemination for weather and hydrologic measurements, and forecasts.

NWS series of NOAA Technical Reports is a continuation of the former series, ESSA Technical Report Weather Bureau (WB).

Reports listed below are available from the National Technical Information Service, U.S. Department of Commerce, Sills Bldg., 5285 Port Royal Road, Springfield, VA 22161. Prices vary. Order by accession number (given in parentheses).

ESSA Technical Reports

- WB 1 Monthly Mean 100-, 50-, 30-, and 10-Millibar Charts January 1964 through December 1965 of the IQSY Period. Staff, Upper Air Branch, National Meteorological Center, February 1967, 7 p, 96 charts. (AD 651 101)
- WB 2 Weekly Synoptic Analyses, 5-, 2-, and 0.4-Mb Surfaces for 1964 (based on observations of the Meteorological Rocket Network during the IQSY). Staff, Upper Air Branch, National Meteorological Center, April 1967, 16 p, 160 charts. (AD 652 696)
- WB 3 Weekly Synoptic Analyses, 5-, 2-, and 0.4-Mb Surfaces for 1965 (based on observations of the Meteorological Rocket Network during the IQSY). Staff, Upper Air Branch, National Meteorological Center, August 1967, 173 p. (AD 662 053)
- WB 4 The March-May 1965 Floods in the Upper Mississippi, Missouri, and Red River of the North Basins. J. L. H. Paulhus and E. R. Nelson, Office of Hydrology, August 1967, 100 p.
- WB 5 Climatological Probabilities of Precipitation for the Conterminous United States. Donald L. Jorgensen, Techniques Development Laboratory, December 1967, 60 p.

MONTHLY RELATIVE FREQUENCIES OF PRECIPITATION FOR  
THE UNITED STATES FOR 6-, 12-, AND 24-H PERIODS

John S. Jensenius, Jr.  
and  
Mary C. Erickson

ABSTRACT

Climatic relative frequencies of various amounts of precipitation are presented for 6-, 12-, and 24-h periods. These relative frequencies were determined from observed precipitation data based on a 13-year sample. Values are given for approximately 240 stations in the United States for precipitation amounts of greater than or equal to .01, .25, .50, 1.00, and 2.00 inches. The precipitation frequencies are presented in tabular form; however, analyzed maps for the contiguous United States have also been included for the probability of .01 inches or more of precipitation.

1. INTRODUCTION

Forecasts of precipitation produced by the National Weather Service (NWS) are often expressed in terms of the probability of .01 inches or more of precipitation falling at a particular location within a given time period. For forecast periods with projections of 12 hours or less, the valid period is usually 6 hours in duration; for forecast periods with projections between 12 and 60 hours, the valid period is 12 hours in duration; for forecasts in the 3 to 5 day range, the valid period is 24 hours in duration. When making these probability of precipitation (PoP) forecasts, the forecaster should consider the normal climatic value of the PoP. Climatic PoP values are obtained by determining the relative frequency of the occurrence of a given precipitation amount based on a sizable sample of data. For this study, we have used 13 years (October 1972-September 1985) of data to determine the relative frequency of precipitation by month for each of 246 stations. Frequencies were determined for four 6-h periods (0000-0600 GMT, 0600-1200 GMT, 1200-1800 GMT, and 1800-0000 GMT), two 12-h periods (0000-1200 GMT and 1200-0000 GMT), and one 24-h period (0000-0000 GMT). The monthly relative frequencies for .01 inches or more of precipitation are presented in both tabular and graphical forms in this document. Monthly relative frequencies of .25, .50, 1.00, and 2.00 inches or more of precipitation are given only in tabular form.

2. TABLES OF MONTHLY RELATIVE FREQUENCIES

Tables 1-5 contain the monthly relative frequencies for .01, .25, .50, 1.00, and 2.00 inches or more of precipitation, respectively. Within each table, stations are arranged alphabetically by city. Values are given by month for the four 6-h periods, both 12-h periods, and the 24-h period defined previously. In order to calculate each relative frequency, we required that a minimum of 180 of the approximately 400 possible observations be available. When fewer than 180 observations were available, the entry in the table is marked with asterisks. Also note that a value of 0.0 implies that the specified amount was not observed within the valid period during the 13 years.

### 3. MAPS OF MONTHLY RELATIVE FREQUENCIES OF .01 INCHES OR MORE OF PRECIPITATION

Contoured maps of monthly relative frequencies of .01 inches or more of precipitation are given in Figures 1.1-12.7. The first part of the figure number indicates the month for which the data are valid while the second part of the figure number indicates the valid period during the day. Valid periods of 0000-0600 GMT, 0600-1200 GMT, 1200-1800 GMT, 1800-0000 GMT, 0000-1200 GMT, 1200-0000 GMT, and 0000-0000 GMT are indicated by the numbers 1 through 7, respectively.

The maps were obtained by use of an objective analysis and contouring procedure and were based on the data in Table 1. The raw data were first analyzed by use of a successive correction scheme (Cressman, 1959). The analyzed fields were then processed by a smoother-desmoothing routine to remove small-scale perturbations from the analysis. With these perturbations removed, the contoured fields are easier to interpret visually. Finally, a contouring program was used to produce the maps. Note, however, that these procedures may cause the contoured fields to differ slightly from the actual data in Table 1. We, therefore, recommend that Table 1 be used to obtain values for the listed stations and that the figures be used for visualizing the geographic distribution of precipitation frequency. Of course, the contours will not be accurate in mountainous areas where local topographic features greatly affect the observed precipitation. Note that several of the maps contain 0 percent contours. Although we recognize that these contours are unrealistic, we have not removed them from the maps because we think the contours are useful for estimating values where the monthly relative frequencies are between 0 and 5 percent. The areas surrounded by the 0 percent contours should, of course, be interpreted as having almost no precipitation during the month.

### 4. DISCUSSION

The tables and figures in this report give the monthly relative frequencies of various amounts of precipitation for specific periods during the day. We also would like to provide the reader with several references pertaining to precipitation climatologies. In particular, Jorgensen (1967) presents a detailed discussion of climatic probabilities of .01 inches or more of precipitation for the United States. Included with the analyzed relative frequencies are discussions of seasonal trends of precipitation; factors influencing precipitation frequencies on a daily, monthly, and annual basis; and regional differences in the observed relative frequency of precipitation. Jorgensen's results were based on 15 years of data (1949-1964) for 108 stations. Although based on fewer stations than in our report, Jorgensen's analyses were drawn subjectively with the use of topographic maps and show more detail, especially in mountainous areas. Charba (1985) also presents detailed analyzed maps of 6-h precipitation frequencies. Data from about 3000 stations in the contiguous United States were used to produce these analyses. Only a limited number of maps, however, are presented. The National Climatic Data Center (1982, 1986) also has several publications which include sections dealing with the climatology of precipitation. These publications give monthly mean precipitation amount data and average number of days per month with .01 inches or more of precipitation data.

#### ACKNOWLEDGMENTS

We gratefully acknowledge the continuing efforts of many staff members of the Techniques Development Laboratory (TDL) who, over the past 15 years, have contributed to the maintenance of the data base from which these monthly relative frequencies were derived. The data were supplied to TDL by the National Climatic Data Center in Asheville, North Carolina. We also wish to acknowledge the programming support provided by Mr. Joseph Palko. Finally, we want to thank Mr. J. Paul Dallavalle and other members of TDL who provided comments and suggestions during both the computational work and the final preparation of this document.

## NOAA SCIENTIFIC AND TECHNICAL PUBLICATIONS

*The National Oceanic and Atmospheric Administration* was established as part of the Department of Commerce on October 3, 1970. The mission responsibilities of NOAA are to assess the socioeconomic impact of natural and technological changes in the environment and to monitor and predict the state of the solid Earth, the oceans and their living resources, the atmosphere, and the space environment of the Earth.

The major components of NOAA regularly produce various types of scientific and technical information in the following kinds of publications:

**PROFESSIONAL PAPERS**—Important definitive research results, major techniques, and special investigations.

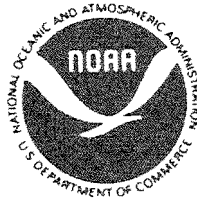

**CONTRACT AND GRANT REPORTS**—Reports prepared by contractors or grantees under NOAA sponsorship.

**ATLAS**—Presentation of analyzed data generally in the form of maps showing distribution of rainfall, chemical and physical conditions of oceans and atmosphere, distribution of fishes and marine mammals, ionospheric conditions, etc.

**TECHNICAL SERVICE PUBLICATIONS**—Reports containing data, observations, instructions, etc. A partial listing includes data serials; prediction and outlook periodicals; technical manuals, training papers, planning reports, and information serials; and miscellaneous technical publications.

**TECHNICAL REPORTS**—Journal quality with extensive details, mathematical developments, or data listings.

**TECHNICAL MEMORANDUMS**—Reports of preliminary, partial, or negative research or technology results, interim instructions, and the like.
