Geographical Introduction

Fresno is the closest major city to the geographic center of California with an estimated population of 480,000 people as of early 2007. This places it as the sixth largest city in the state. Fresno is located roughly in the east-central portion of the San Joaquin Valley, which is the southern half of the Central Valley of California. Fresno lies roughly halfway between the sprawling metropolitan areas of southern California and the San Francisco Bay and Sacramento metropolitan areas to the north. As a result, a large number of people and goods travel through the area to go between or to the population hubs of northern and southern California.

The San Joaquin Valley is generally a flat area with elevations roughly between 100 and 600 feet in elevation. The foothills of the Sierra Nevada are located about 15 miles east of the Fresno which eventually rise to the Sierra Nevada mountains. The Sierra Nevada mountains rise to elevations between 12,000 and 15,000 feet along the 'crest' which is about 80 miles to the east of the city. Some 55 miles to the west lies the Diablo Range, a chain of mountains that extends about 2,000 to 3,000 feet high on average. The natural vegetation of the San Joaquin Valley and the nearby foothills below 1,000 feet in elevation is grass and sagebrush with only a few oak trees mainly along riverbanks. However, extensive urban development and agricultural use have significantly altered the landscape to where little of it today is native vegetation, especially in areas below 500 feet in elevation.

In recent years, the city continues to grow and expand outward from the downtown area, especially on the north side. This has resulted in the conversion of a large number of open plots of land into residential and commercial developments. The continued growth of the city has resulted in an urban heat island effect, most established at night, where temperatures run as much as 10°F warmer than outlying agricultural areas.

History of Weather Observations

Initial weather observations in Fresno were for precipitation only and were made by the Southern Pacific Railroad Company. These observations were made starting in January 1878. Only monthly precipitation totals from the Southern Pacific Railroad Company have been incorporated into the Fresno records. These records were considered as part of the official weather record for Fresno until August 16, 1887 when the Signal Service commenced weather observations in the city.

A letter dating July 27, 1887 was sent to Sgt. J.R. Williams of the U.S. Signal Corps in Fort Davis, Texas to proceed to Fresno to open what would become the National Weather Service office here. On August 10, 1887 a "nice" office was secured by Sgt. Williams in Fresno for a cost of \$15 a month. Six days later on August 16th, weather observations began by the Army Signal Corps in downtown Fresno at the Taylor Building, located at 1042 J Street (what is now Fulton Street). These observations consisted of precipitation, temperature, humidity, pressure and wind. New instruments were installed at this site on October 15, 1887. Observations continued at this location through January 30, 1889.

On January 31, 1889 observations began at the Hughes Building located at 1011 I Street (now Broadway). This was a move of about 420 feet to the southwest of the original site. The office lasted a little over a year at this location and on September 30, 1890 took its last observations here before moving again. This time the office moved 435 feet to the northeast to the Fresno Loan and Savings Bank Building located at 1052 J Street (now Fulton Street) and began observations here on October 1, 1890. The office remained at the Fresno Loan and Savings Bank Building through January 25, 1895.

On January 26, 1895 it was time for the office to move to I Street once again. The new location was at 1056 I Street (now Broadway) at the Farmer's National Bank Building. This was a move of 380 feet to the southwest of the location at the Fresno Loan and Savings Bank. Weather services were transferred from the Army to the U.S. Weather Bureau in 1891. Weather observations continued at the Farmer's National Bank Building through April 30, 1913.

Figure 1 – The Farmers' National Bank Building in downtown Fresno. This was the location of the National Weather Service's Fresno office from January 26, 1895 through April 30, 1913. A wind vane can be noted on the roof. The above photo was taken on April 30, 1896.

On May 1, 1913, the office was established at the Roswell Building located at the southeast corner of Tulare and Van Ness Avenues. This move was 700 feet northeast of the Farmer's National Bank Building site. The office at the Roswell Building was the

sole observing site and office in Fresno for weather until July 1, 1929. On this date the U.S. Weather Bureau opened a second office to support the nation's growing aviation community at Maddux Field Airport at the corner of Barstow Avenue and old Highway 99. The Maddux Field office moved to 7 miles southeast to Chandler Field, which is located on the west side of Fresno, on March 14, 1930. Weather observations continued at Chandler Field until March 31, 1935 when the airport office closed.

Fresno continued to have two offices through the mid 1930s. The "downtown" office stayed at the Roswell Building through August 31, 1933. Then on September 1, 1933, the "downtown" office made a final move to the Brix Building located at 1221 Fulton Street. This location was 700 feet west-northwest of the Roswell Building.

On March 1, 1939, weather observations began once again at Chandler Field. Later that year it was decided to consolidate the airport and "downtown" offices in Fresno and have just one location at Chandler Field. On July 1, 1939 the Brix Building location was closed and all weather functions in Fresno were transferred to Chandler Field.

It is important to note that weather observations, particularly of wind, were impacted substantially by taller surrounding buildings. This was first noted by the observers on August 16, 1887 and noted as a problem through the 1930s. During the period of which offices in Fresno were located at both the downtown location and at the airports at Maddux Field and Chandler Field, temperature and precipitation records were compiled from the airport when data was available over the downtown site. This was done as it provided a more consistent station sighting and thus a better longer term climate record.

On August 20, 1949, the Weather office experienced another move, relocating from its spot in Chandler Field to the northeast corner of the Fresno Air Terminal (now the Fresno-Yosemite International Airport). The move to the Fresno Air Terminal was seven miles east-northeast of the location at Chandler Field. After completion of new airport facilities on September 1, 1961, the office again moved to the tower building on the southwest portion of the Fresno Air Terminal. At the end of January 1986, the office was relocated to the corner of Peach Avenue and Dakota Avenue in Clovis, just across the street from the airport, however, the official weather instruments remained on the grounds of the Fresno-Yosemite International Airport.

Figure 2 – Weather instruments at the Fresno Air Terminal, taken on January 14, 1964 (photo courtesy NCDC).

On September 1, 1995, an Automated Surface Observation System or ASOS was commissioned at the Fresno-Yosemite International Airport. With the commissioning of ASOS several changes occurred with the climate records of Fresno. Due to the changes in methodology in observing sky cover by ASOS compared to human observers, records of cloud cover were discontinued. This includes the removal of a sunshine switch. In addition, ASOS is a totally automated system and can not record how much snow, ice pellets or hail accumulates. Any accumulating snowfall, ice pellets or hail is measured by the Air National Guard unit located on the grounds of the Fresno-Yosemite International Airport. In addition, the Air National Guard also has a temperature sensor and standard rain gauge to record daily weather observations. These instruments are in place to be used as the official back-up for temperature and precipitation data in the event that equipment issues arise with ASOS and a need for back-up climate information becomes necessary.

Figure 3 – The ASOS at the Fresno-Yosemite International Airport (photo by Chris Stachelski, taken in December 2007).

An Overview of Fresno’s Climate

The climate of Fresno is heavily influenced by the mountain ranges that border the San Joaquin Valley. The Diablo Range rises to elevations as high as 2,000 to 3,000 feet, is located roughly 55 miles to the west of the city, and acts to create a rain shadow effect on the San Joaquin Valley and is especially pronounced in areas west of the city on the valley floor. The Diablo Range blocks a considerable amount of moisture from flowing into the San Joaquin Valley from the Pacific. Influxes of tropical moisture from the south are reduced often by the Tehachapi Mountain range, which border the southern end of the San Joaquin Valley. The Tehachapis rise to between 6,000 and 8,800 feet in elevation on average. As a result of these mountain chains, the climate of Fresno is dry compared to other locations in the continental United States.

During the six month period from November through April, Fresno receives 90 percent of its normal annual precipitation, which is 11.23 inches. Often this precipitation falls in association with large-scale frontal systems. Winter temperatures are usually mild with occasional cold snaps dropping temperatures to or below freezing. However, prolonged cold snaps are rare, as winter months feature nighttime fog that usually keeps the temperature from dropping to or below freezing. On average, low temperatures of 32 degrees or below occur 19 times a year. Given the scarcity of cold air necessary for it to fall, snow is a rare occurrence, even that of flurries.

When it's not raining, the cool season is most known for its fog. The typical fog season runs from late November through mid February during the time of year when daylight is the shortest. Fog lasting for several continuous days is not unusual during this time of the year; often sunlight may only be noticeable for a few hours of the day – if that. Periods of fog lasting nearly two weeks are common in many cool seasons. During these times, fog will lower to the valley floor at night dropping visibility to below a quarter of a mile and then rise during the day to at best a few hundred feet above the ground. This gives the sky the appearance of heavy, solid cloud layer. Dense fog, or that where the visibility drops to or below a ¼ of a mile, is known as “Tule (too lee) fog” locally; the name is derived from the Tule reeds once prevalent in the valley marshes.

Spring represents the transition between the winter storm season and the hot and dry summer. During the springs, weak fronts will bring light rainfall amounts to the area and often are known for creating gusty winds ahead and behind their passage. In years when winter precipitation is minimal, blowing dust becomes a common issue on days when the wind picks up.

Summers in Fresno are characterized by abundant sunshine and hot temperatures. Clouds are typically only seen during the afternoon and evening hours over the Sierra Nevada while across the San Joaquin Valley full sunshine prevails. Temperatures frequently reach into the triple digits on the hottest days, and in the hottest years reach or exceed the 110°F threshold. During the summer months of June, July and August, Fresno averages at least 95 percent of the total possible sunshine in each month. Rainfall, while infrequent, does occur, but amounts are usually light. However, June has had the distinction of producing some of the greatest amounts of rainfall in a short duration of time.

Winds in the San Joaquin Valley often flow with the axis of the valley and thus blow frequently from the northwest. During the summer, a beneficial feature of these northwest winds is the increase in speed during the evening hours that often moderates temperatures. Humidity values during the summer months are usually low, with values averaging between 20 and 25 percent during the hot late afternoon.

During the fall, a subtle trend toward cooling takes place as well as the return of precipitation. Frontal passages tend to become more common by the later half of October and by November usually bring the first widespread wetting rains of the season.

Thunderstorms can occur in any month of the year. Cool season thunderstorms are noted for often being “post frontal” and occurring in any pockets of instability that exists after a cold frontal passage. These thunderstorms often produce small hail as well as cold air funnel clouds. Tornadoes, while infrequent, have occurred in the city and surrounding areas. The most noteworthy tornado in the history of the city occurred on February 20, 1980 when a tornado hit the Fresno Air Terminal, damaging it along with several nearby neighborhoods.

Daily Normals, Means and Extremes – Temperature

Following is a list by month of normal, mean and extreme daily temperature records. All temperature data is given in degrees Fahrenheit. Daily records began on August 16, 1887. Only the most recent year of occurrence is listed for daily records. Normals are for the thirty year period from 1971 through 2000.

January

Values in **red** represent the extremes for the month.

Prob	99%	99%	
Average	Feb 8	Dec 3	

NO indicates no occurrence.

Prob is the probability of occurrence.

Average is the mean date for years with an occurrence.

* = First freeze if listed in January occurred in the following year, i.e., in the row for 1888, the first freeze of the season occurred in January of 1889.

Bold face values represent extremes.

Heating and Cooling Degree Days

Listed below are the thirty year normal heating and cooling degree days (based on 65°F) by month.

	Monthly Normal Heating Degree Days	Monthly Normal Cooling Degree Days	Seasonal Normal Heating Degree Days	Seasonal Normal Cooling Degree Days

Daily Normals, Means and Records – Precipitation

Following is a list by month of normal, mean and extreme daily precipitation records. All values listed are in inches. Daily records began on August 16, 1887. Only the most recent year of occurrence is listed for daily records. Normals are for the thirty year period from 1971 through 2000. Seasonal values are for the “water year,” which runs from the July 1st through June 30th time period.

January

Values in red represent the extremes for the month.

Fresno Water Season Statistics

(Based on July-June records)

Earliest Start to the Water Season

(Based on measurable rain)

July 3, 1925

July 6, 2001 (rain also fell on July 7, 2001)

July 9, 1950 (rain also fell on July 10, 1950)

July 11, 1908

July 12, 1969

July 12, 1992

Latest Start to the Water Season

(Based on measurable rain)

November 30, 1932

November 16, 1905

November 14, 1931

November 13, 1955

November 11, 1954

Earliest Ending to the Water Season

(Based on measurable rain)

April 1, 1897

April 2, 1928

April 10, 1893

April 11, 1916

April 12, 1992

Latest Ending to the Water Season

(Based on measurable rain)

June 30, 1982

June 29, 1926

June 28, 1920

June 27, 1996

June 27, 1970

Greatest Intensity Precipitation For **Specified Time Periods** **(September 1887 – November 1986)**

Intensity precipitations records were discontinued after November 1986 due to the removal of equipment necessary to compile this type of weather record. Although ASOS is capable of computing precipitation totals for specified short duration time intervals, these values were not incorporated into the records listed below due to the gap in the records since November 1986.

Fresno Snow Statistics

Since 1907, Fresno has received snowfall on a total of **47 times** (the event of January 21-22, 1962 is counted as one event as it lasted from one day into another). There has been **measurable snowfall** a total of **12 times**. The month with the most instances of measurable snowfall is January with six such occurrences.

The **earliest date** snowfall has occurred in Fresno is **November 21, 1931** when a trace was reported. The **latest date** snowfall has occurred is **March 23rd**. Snow has fallen on this later date on two separate instances – in **1916** with 0.1” and in **1929** when 0.2” fell.

The **greatest daily snowfall** is 2.5” on January 12, 1930.

The **greatest amount of snow to fall in a given month** is as follows:

November, a trace in 1931

December, 1.5” in 1911

January, 2.5” in 1930

February, a trace in 1911 and 1976

March, 0.2” in 1929

Dates that have had snowfall on more the one instance:

January 1st – 0.6” in 1910, 0.5” in 1916, trace in 1960

January 15 – trace in 1917, trace in 1928

January 26 – 0.1” in 1957, trace in 1972

March 23 – 0.1” in 1916, 0.2” in 1929

December 20 – 1.2” in 1968, trace in 1990, 0.5” in 1998

Dates with consecutive snowfall:

January 12, 13, 14 in 1932 – trace on each day

December 9, 10, 11 in 1932 – trace on each day

December 19, 20, 21 in 1990 – trace on each day

Most instances of snowfall:

In one year for measurable snow: 4 in 1916 – 2 in January, 1 in March, 1 in December

In one year for snow: 6 in 1932 – 3 days in January, 3 days in December

In one month for measurable snow: 2 days in January 1916

In one month for snow: 3 days in January 1916, 3 days in January 1932, 3 days in December 1932, 3 days in December 1990, 3 days in December 1996

Instances of Hail/Ice Pellets/Snow Grains at Fresno

The following is a list of officially observed instances of hail, ice pellets and snow grains at the official National Weather Service observing site in Fresno since 1907 and how much accumulated, if that. These reports are also counted as “snow” in totals compiled by NCDC.

March 11, 1913	Trace	February 1, 1979	Trace (Ice pellets)
March 11, 1922	Trace	February 21, 1979	Trace (Ice pellets)
February 2, 1939	Trace (Hail)	March 13, 1979	Trace (Ice pellets)
February 8, 1939	Trace (Hail)	February 4, 1989	Trace (Ice pellets)
January 23, 1949	Trace (Hail)	February 8, 1989	Trace (Ice pellets)
February 11, 1949	Trace (Hail)	February 18, 1990	Trace (Hail)
January 2, 1950	Trace (Snow pellets)	March 1, 1991	Trace (Hail)
April 8, 1950	Trace (Hail)	February 15, 1992	Trace (Hail)
December 30, 1951	Trace (Hail)	February 18, 1994	Trace (Hail)
April 25, 1952	Trace (Hail)	January 5, 1995	Trace (Hail)
November 15, 1952	Trace (Hail)	June 15, 1995	Trace (Hail)
January 14, 1953	Trace (Hail)	February 26, 1996	Trace (Hail)
February 14, 1954	Trace (Hail)	February 7, 1998	Trace (Hail)
March 24, 1954	Trace (Hail)	February 14, 1998	Trace (Hail)
February 27, 1955	Trace (Hail)	March 28, 1998	Trace (Hail)
April 26, 1955	Trace (Hail)	February 9, 1999	Trace (Snow Grains)
November 16, 1955	Trace (Hail)	February 27, 2000	Trace (Snow Grains)
December 7, 1972	Trace (Ice pellets)	April 7, 2001	Trace (Hail)
March 3, 1973	Trace (Ice pellets)	October 20, 2004	Trace (Snow Grains)
October 28, 1974	Trace (Ice pellets)

Fresno Highest Sustained Wind Speed and Direction By Month (1887 – present)

January: 50 mph from the southwest on January 27, 1916
February: 43 mph from the southeast on February 9, 1938
March: 54 mph from the northwest on March 23, 1916
April: 38 mph from the northwest on March 28, 1948
May: 38 mph from the north on May 19, 1952
June: 47 mph from the northwest on June 14, 1939
July: 27 mph from the northwest on July 1, 1916
August: 31 mph from the south on August 5, 1961
September: 32 mph from the northwest on September 12, 1918
October: 40 mph from the northeast on October 29, 1959
November: 34 mph from the northwest on November 5, 1947
December: 43 mph from the northwest on December 10, 1949

Fresno Peak Wind Gusts and Direction By Month (1984 – present)

Wind gusts are only available for Fresno on a consistent basis since 1984, prior to 1984 there are gusts occasionally listed in NWS documents but not on a consistent basis.

January: 55 mph from the southeast on January 27, 1987
February: 46 mph from the south on February 14, 1986
March: 43 mph from the southeast on March 4, 1987
April: 41 mph from 320 degrees on April 14, 2002
May: 41 mph from the northwest on May 16, 1991
June: 35 mph from the northwest on June 11, 1992
July: 30 mph from 30 degrees on July 30, 2001
August: 36 mph from the northwest on August 30, 1984
September: 33 mph from 16 degrees on September 2, 2003 and 33 mph from the northwest on September 9, 1991
October: 46 mph from the north on October 26, 1991
November: 44 mph from the northwest on November 29, 1991
December: 48 mph from the south on December 28, 1991

The highest wind gust clocked in Fresno was recorded on February 11, 1951 when a gust of 57 mph was recorded (direction unknown) by the NWS at the Fresno Air Terminal.

Fresno Barometric Pressure Records (1888 – present) (Reduced to sea level)

Month	Average	Lowest	Highest
January	30.16"	29.10" on 1/27/1916	30.62" on 1/31/1916 and 1/3/1947

Notes: Period of record for dense fog extends back to October 1910. Observations were not used for this database prior to October 1910 as information in the old climate log books did not distinguish between days with dense fog and fog. Records above include days with dense or heavy fog as reported in the climate log books and LCDs for Fresno. Prior to 1943, dense fog was recorded as having visibility less than 5/16ths of a mile. Numbers in bold face and underlined represent the extreme highest value for the period of record while numbers in italic, bold font represent the extreme minimum for the period of record.

Acknowledgements

We would like to thank Steve Mendenhall, Meteorologist-In-Charge, and Larry Greiss, Science Operations Officer, here at the National Weather Service Office in Hanford for the encouragement in pursuing this project and reviewing it for publication. Additional thanks goes to the staff over the years at the National Weather Service Offices in Fresno, Clovis and Hanford for collecting and preserving the hundreds of weather observations combed through to compile this report. Lastly, heartfelt thanks are extended to Terry Johnson for her assistance in formatting this report.

NOAA TECHNICAL MEMORANDA National Weather Service, Western Region Subseries

The National Weather Service (NWS) Western Region (WR) Subseries provides an informal medium for the documentation and quick dissemination of results not appropriate, or not yet ready, for formal publication. The series is used to report on work in progress, to describe technical procedures and practices, or to relate

progress to a limited audience. These Technical Memoranda will report on investigations devoted primarily to regional and local problems of interest mainly to personnel, and hence will not be widely distributed.

Papers 1 to 25 are in the former series, ESSA Technical Memoranda, Western Region Technical Memoranda (WRTM); papers 24 to 59 are in the former series, ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM). Beginning with 60, the papers are part of the series, NOAA Technical Memoranda NWS. Out-of-print memoranda are not listed.

Papers 2 to 22, except for 5 (revised edition), are available from the National Weather Service Western Region, Scientific Services Division, 125 South State Street - Rm 1311, Salt Lake City, Utah 84138-1102. Paper 5 (revised edition), and all others beginning with 25 are available from the National Technical Information Service, U.S. Department of Commerce, Sills Building, 5285 Port Royal Road, Springfield, Virginia 22161. Prices vary for all paper copies; microfiche are \$3.50. Order by accession number shown in parentheses at end of each entry.

ESSA Technical Memoranda (WRTM)

- 2 Climatological Precipitation Probabilities. Compiled by Lucianne Miller, December 1965.
- 3 Western Region Pre- and Post-FP-3 Program, December 1, 1965, to February 20, 1966. Edward D. Diemer, March 1966.
- 5 Station Descriptions of Local Effects on Synoptic Weather Patterns. Philip Williams, Jr., April 1966 (Revised November 1967, October 1969). (PB-17800)
- 8 Interpreting the RAREP. Herbert P. Benner, May 1966 (Revised January 1967).
- 11 Some Electrical Processes in the Atmosphere. J. Latham, June 1966.
- 17 A Digitalized Summary of Radar Echoes within 100 Miles of Sacramento, California. J. A. Youngberg and L. B. Overaas, December 1966.
- 21 An Objective Aid for Forecasting the End of East Winds in the Columbia Gorge, July through October. D. John Coparanis, April 1967.
- 22 Derivation of Radar Horizons in Mountainous Terrain. Roger G. Pappas, April 1967.

ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM)

- 25 Verification of Operation Probability of Precipitation Forecasts, April 1966-March 1967. W. W. Dickey, October 1967. (PB-176240)
- 26 A Study of Winds in the Lake Mead Recreation Area. R. P. Augulis, January 1968. (PB-177830)
- 28 Weather Extremes. R. J. Schmidli, April 1968 (Revised March 1986). (PB86 177672/AS). (Revised October 1991 - PB92-115062/AS)
- 29 Small-Scale Analysis and Prediction. Philip Williams, Jr., May 1968. (PB178425)
- 30 Numerical Weather Prediction and Synoptic Meteorology. CPT Thomas D. Murphy, USAF, May 1968. (AD 673365)
- 31 Precipitation Detection Probabilities by Salt Lake ARTC Radars. Robert K. Belesky, July 1968. (PB 179084)
- 32 Probability Forecasting--A Problem Analysis with Reference to the Portland Fire Weather District. Harold S. Ayer, July 1968. (PB 179289)
- 36 Temperature Trends in Sacramento--Another Heat Island. Anthony D. Lentini, February 1969. (PB 183055)
- 37 Disposal of Logging Residues Without Damage to Air Quality. Owen P. Cramer, March 1969. (PB 183057)
- 39 Upper-Air Lows Over Northwestern United States. A.L. Jacobson, April 1969. PB 184296)
- 40 The Man-Machine Mix in Applied Weather Forecasting in the 1970s. L.W. Snellman, August 1969. (PB 185068)
- 43 Forecasting Maximum Temperatures at Helena, Montana. David E. Olsen, October 1969. (PB 185762)
- 44 Estimated Return Periods for Short-Duration Precipitation in Arizona. Paul C. Kangieser, October 1969. (PB 187763)
- 46 Applications of the Net Radiometer to Short-Range Fog and Stratus Forecasting at Eugene, Oregon. L. Yee and E. Bates, December 1969. (PB 190476)
- 47 Statistical Analysis as a Flood Routing Tool. Robert J.C. Burnash, December 1969. (PB 188744)
- 48 Tsunami. Richard P. Augulis, February 1970. (PB 190157)
- 49 Predicting Precipitation Type. Robert J.C. Burnash and Floyd E. Hug, March 1970. (PB 190962)

- 50 Statistical Report on Aeroallergens (Pollens and Molds) Fort Huachuca, Arizona, 1969. Wayne S. Johnson, April 1970. (PB 191743)
- 51 Western Region Sea State and Surf Forecaster's Manual. Gordon C. Shields and Gerald B. Burdwell, July 1970. (PB 193102)
- 52 Sacramento Weather Radar Climatology. R.G. Pappas and C. M. Veliquette, July 1970. (PB 193347)
- 54 A Refinement of the Vorticity Field to Delineate Areas of Significant Precipitation. Barry B. Aronovitch, August 1970.
- 55 Application of the SSARR Model to a Basin without Discharge Record. Vail Schermerhorn and Donal W. Kuehl, August 1970. (PB 194394)
- 56 Areal Coverage of Precipitation in Northwestern Utah. Philip Williams, Jr., and Werner J. Heck, September 1970. (PB 194389)
- 57 Preliminary Report on Agricultural Field Burning vs. Atmospheric Visibility in the Willamette Valley of Oregon. Earl M. Bates and David O. Chilcote, September 1970. (PB 194710)
- 58 Air Pollution by Jet Aircraft at Seattle-Tacoma Airport. Wallace R. Donaldson, October 1970. (COM 71 00017)
- 59 Application of PE Model Forecast Parameters to Local-Area Forecasting. Leonard W. Snellman, October 1970. (COM 71 00016)
- 60 An Aid for Forecasting the Minimum Temperature at Medford, Oregon, Arthur W. Fritz, October 1970. (COM 71 00120)
- 63 700-mb Warm Air Advection as a Forecasting Tool for Montana and Northern Idaho. Norris E. Woerner, February 1971. (COM 71 00349)
- 64 Wind and Weather Regimes at Great Falls, Montana. Warren B. Price, March 1971.
- 65 Climate of Sacramento, California. Laura Masters-Bevan. NWSO Sacramento, November 1998 (6th Revision). (PB99-118424)
- 66 A Preliminary Report on Correlation of ARTCC Radar Echoes and Precipitation. Wilbur K. Hall, June 1971. (COM 71 00829)
- 69 National Weather Service Support to Soaring Activities. Ellis Burton, August 1971. (COM 71 00956)
- 71 Western Region Synoptic Analysis-Problems and Methods. Philip Williams, Jr., February 1972. (COM 72 10433)
- 74 Thunderstorms and Hail Days Probabilities in Nevada. Clarence M. Sakamoto, April 1972. (COM 72 10554)
- 75 A Study of the Low Level Jet Stream of the San Joaquin Valley. Ronald A. Willis and Philip Williams, Jr., May 1972. (COM 72 10707)
- 76 Monthly Climatological Charts of the Behavior of Fog and Low Stratus at Los Angeles International Airport. Donald M. Gales, July 1972. (COM 72 11140)
- 77 A Study of Radar Echo Distribution in Arizona During July and August. John E. Hales, Jr., July 1972. (COM 72 11136)
- 78 Forecasting Precipitation at Bakersfield, California, Using Pressure Gradient Vectors. Earl T. Riddiough, July 1972. (COM 72 11146)
- 79 Climate of Stockton, California. Robert C. Nelson, July 1972. (COM 72 10920)
- 80 Estimation of Number of Days Above or Below Selected Temperatures. Clarence M. Sakamoto, October 1972. (COM 72 10021)
- 81 An Aid for Forecasting Summer Maximum Temperatures at Seattle, Washington. Edgar G. Johnson, November 1972. (COM 73 10150)
- 82 Flash Flood Forecasting and Warning Program in the Western Region. Philip Williams, Jr., Chester L. Glenn, and Roland L. Raetz, December 1972, (Revised March 1978). (COM 73 10251)
- 83 A comparison of Manual and Semiautomatic Methods of Digitizing Analog Wind Records. Glenn E. Rasch, March 1973. (COM 73 10669)
- 86 Conditional Probabilities for Sequences of Wet Days at Phoenix, Arizona. Paul C. Kangieser, June 1973. (COM 73 11264)
- 87 A Refinement of the Use of K-Values in Forecasting Thunderstorms in Washington and Oregon. Robert Y.G. Lee, June 1973. (COM 73 11276)
- 89 Objective Forecast Precipitation Over the Western Region of the United States. Julia N. Paegle and Larry P. Kierulff, September 1973. (COM 73 11946/3AS)
- 91 Arizona "Eddy" Tornadoes. Robert S. Ingram, October 1973. (COM 73 10465)
- 92 Smoke Management in the Willamette Valley. Earl M. Bates, May 1974. (COM 74 11277/AS)
- 93 An Operational Evaluation of 500-mb Type Regression Equations. Alexander E. MacDonald, June 1974. (COM 74 11407/AS)
- 94 Conditional Probability of Visibility Less than One-Half Mile in Radiation Fog at Fresno, California. John D. Thomas, August 1974. (COM 74 11555/AS)
- 95 Climate of Flagstaff, Arizona. Paul W. Sorenson, and updated by Reginald W. Preston, January 1987. (PB87 143160/AS) (Revised August 2002 3rd Revision)
- 96 Map type Precipitation Probabilities for the Western Region. Glenn E. Rasch and Alexander E. MacDonald, February 1975. (COM 75 10428/AS)
- 97 Eastern Pacific Cut-Off Low of April 21-28, 1974. William J. Alder and George R. Miller, January 1976. (PB 250 711/AS)
- 98 Study on a Significant Precipitation Episode in Western United States. Ira S. Brenner, April 1976. (COM 75 10719/AS)
- 99 A Study of Flash Flood Susceptibility-A Basin in Southern Arizona. Gerald Williams, August 1975. (COM 75 11360/AS)
- 102 A Set of Rules for Forecasting Temperatures in Napa and Sonoma Counties. Wesley L. Tuft, October 1975. (PB 246 902/AS)

- 103 Application of the National Weather Service Flash-Flood Program in the Western Region. Gerald Williams, January 1976. (PB 253 053/AS)
- 104 Objective Aids for Forecasting Minimum Temperatures at Reno, Nevada, During the Summer Months. Christopher D. Hill, January 1976. (PB 252 866/AS)
- 105 Forecasting the Mono Wind. Charles P. Ruscha, Jr., February 1976. (PB 254 650)
- 106 Use of MOS Forecast Parameters in Temperature Forecasting. John C. Plankinton, Jr., March 1976. (PB 254 649)
- 107 Map Types as Aids in Using MOS PoPs in Western United States. Ira S. Brenner, August 1976. (PB 259 594)
- 108 Other Kinds of Wind Shear. Christopher D. Hill, August 1976. (PB 260 437/AS)
- 109 Forecasting North Winds in the Upper Sacramento Valley and Adjoining Forests. Christopher E. Fontana, September 1976. (PB 273 677/AS)
- 110 Cool Inflow as a Weakening Influence on Eastern Pacific Tropical Cyclones. William J. Denney, November 1976. (PB 264 655/AS)
- 112 The MAN/MOS Program. Alexander E. MacDonald, February 1977. (PB 265 941/AS)
- 113 Winter Season Minimum Temperature Formula for Bakersfield, California, Using Multiple Regression. Michael J. Oard, February 1977. (PB 273 694/AS)
- 114 Tropical Cyclone Kathleen. James R. Fors, February 1977. (PB 273 676/AS)
- 116 A Study of Wind Gusts on Lake Mead. Bradley Colman, April 1977. (PB 268 847)
- 117 The Relative Frequency of Cumulonimbus Clouds at the Nevada Test Site as a Function of K-Value. R.F. Quiring, April 1977. (PB 272 831)
- 118 Moisture Distribution Modification by Upward Vertical Motion. Ira S. Brenner, April 1977. (PB 268 740)
- 119 Relative Frequency of Occurrence of Warm Season Echo Activity as a Function of Stability Indices Computed from the Yucca Flat, Nevada, Rawinsonde. Darryl Randerson, June 1977. (PB 271 290/AS)
- 121 Climatological Prediction of Cumulonimbus Clouds in the Vicinity of the Yucca Flat Weather Station. R.F. Quiring, June 1977. (PB 271 704/AS)
- 122 A Method for Transforming Temperature Distribution to Normality. Morris S. Webb, Jr., June 1977. (PB 271 742/AS)
- 124 Statistical Guidance for Prediction of Eastern North Pacific Tropical Cyclone Motion - Part I. Charles J. Neumann and Preston W. Leftwich, August 1977. (PB 272 661)
- 125 Statistical Guidance on the Prediction of Eastern North Pacific Tropical Cyclone Motion - Part II. Preston W. Leftwich and Charles J. Neumann, August 1977. (PB 273 155/AS)
- 126 Climate of San Francisco. E. Jan Null, February 1978. (Revised by George T. Pericht, April 1988 and January 1995). (PB88 208624/AS)
- 127 Development of a Probability Equation for Winter-Type Precipitation Patterns in Great Falls, Montana. Kenneth B. Mielke, February 1978. (PB 281 387/AS)
- 128 Hand Calculator Program to Compute Parcel Thermal Dynamics. Dan Gudget, April 1978. (PB 283 080/AS)
- 129 Fire whirls. David W. Goens, May 1978. (PB 283 866/AS)
- 130 Flash-Flood Procedure. Ralph C. Hatch and Gerald Williams, May 1978. (PB 286 014/AS)
- 131 Automated Fire-Weather Forecasts. Mark A. Mollner and David E. Olsen, September 1978. (PB 289 916/AS)
- 132 Estimates of the Effects of Terrain Blocking on the Los Angeles WSR-74C Weather Radar. R.G. Pappas, R.Y. Lee, B.W. Finke, October 1978. (PB 289767/AS)
- 133 Spectral Techniques in Ocean Wave Forecasting. John A. Jannuzzi, October 1978. (PB291317/AS)
- 134 Solar Radiation. John A. Jannuzzi, November 1978. (PB291195/AS)
- 135 Application of a Spectrum Analyzer in Forecasting Ocean Swell in Southern California Coastal Waters. Lawrence P. Kierulff, January 1979. (PB292716/AS)
- 136 Basic Hydrologic Principles. Thomas L. Dietrich, January 1979. (PB292247/AS)
- 137 LFM 24-Hour Prediction of Eastern Pacific Cyclones Refined by Satellite Images. John R. Zimmerman and Charles P. Ruscha, Jr., January 1979. (PB294324/AS)
- 138 A Simple Analysis/Diagnosis System for Real Time Evaluation of Vertical Motion. Scott Heflick and James R. Fors, February 1979. (PB294216/AS)
- 139 Aids for Forecasting Minimum Temperature in the Wenatchee Frost District. Robert S. Robinson, April 1979. (PB298339/AS)
- 140 Influence of Cloudiness on Summertime Temperatures in the Eastern Washington Fire Weather district. James Holcomb, April 1979. (PB298674/AS)
- 141 Comparison of LFM and MFM Precipitation Guidance for Nevada During Doreen. Christopher Hill, April 1979. (PB298613/AS)
- 142 The Usefulness of Data from Mountaintop Fire Lookout Stations in Determining Atmospheric Stability. Jonathan W. Corey, April 1979. (PB298899/AS)
- 143 The Depth of the Marine Layer at San Diego as Related to Subsequent Cool Season Precipitation Episodes in Arizona. Ira S. Brenner, May 1979. (PB298817/AS)
- 144 Arizona Cool Season Climatological Surface Wind and Pressure Gradient Study. Ira S. Brenner, May 1979. (PB298900/AS)
- 146 The BART Experiment. Morris S. Webb, October 1979. (PB80 155112)
- 147 Occurrence and Distribution of Flash Floods in the Western Region. Thomas L. Dietrich, December 1979. (PB80 160344)
- 149 Misinterpretations of Precipitation Probability Forecasts. Allan H. Murphy, Sarah Lichtenstein, Baruch Fischhoff, and Robert L. Winkler, February 1980. (PB80 174576)
- 150 Annual Data and Verification Tabulation - Eastern and Central North Pacific Tropical Storms and Hurricanes 1979. Emil B. Gunther and Staff, EPHC, April 1980. (PB80 220486)
- 151 NMC Model Performance in the Northeast Pacific. James E. Overland, PMEL-ERL, April 1980. (PB80 196033)
- 152 Climate of Salt Lake City, Utah. William J. Alder, Sean T. Buchanan, William Cope (Retired), James A. Cisco, Craig C. Schmidt, Alexander R. Smith (Retired), Wilbur E. Figgins (Retired), February 1998 - Seventh Revision (PB98-130727)
- 153 An Automatic Lightning Detection System in Northern California. James E. Rea and Chris E. Fontana, June 1980. (PB80 225592)
- 154 Regression Equation for the Peak Wind Gust 6 to 12 Hours in Advance at Great Falls During Strong Downslope Wind Storms. Michael J. Oard, July 1980. (PB91 108367)
- 155 A Raininess Index for the Arizona Monsoon. John H. Ten Harkel, July 1980. (PB81 106494)
- 156 The Effects of Terrain Distribution on Summer Thunderstorm Activity at Reno, Nevada. Christopher Dean Hill, July 1980. (PB81 102501)
- 157 An Operational Evaluation of the Scofield/Oliver Technique for Estimating Precipitation Rates from Satellite Imagery. Richard Ochoa, August 1980. (PB81 108227)
- 158 Hydrology Practicum. Thomas Dietrich, September 1980. (PB81 134033)
- 159 Tropical Cyclone Effects on California. Arnold Court, October 1980. (PB81 133779)
- 160 Eastern North Pacific Tropical Cyclone Occurrences During Intraseasonal Periods. Preston W. Leftwich and Gail M. Brown, February 1981. (PB81 205494)
- 161 Solar Radiation as a Sole Source of Energy for Photovoltaics in Las Vegas, Nevada, for July and December. Darryl Randerson, April 1981. (PB81 224503)
- 162 A Systems Approach to Real-Time Runoff Analysis with a Deterministic Rainfall-Runoff Model. Robert J.C. Burnash and R. Larry Ferral, April 1981. (PB81 224495)
- 163 A Comparison of Two Methods for Forecasting Thunderstorms at Luke Air Force Base, Arizona. LTC Keith R. Cooley, April 1981. (PB81 225393)
- 164 An Objective Aid for Forecasting Afternoon Relative Humidity Along the Washington Cascade East Slopes. Robert S. Robinson, April 1981. (PB81 23078)
- 165 Annual Data and Verification Tabulation, Eastern North Pacific Tropical Storms and Hurricanes 1980. Emil B. Gunther and Staff, May 1981. (PB82 230336)
- 166 Preliminary Estimates of Wind Power Potential at the Nevada Test Site. Howard G. Booth, June 1981. (PB82 127036)
- 167 ARAP User's Guide. Mark Mathewson, July 1981, Revised September 1981. (PB82 196783)
- 168 Forecasting the Onset of Coastal Gales Off Washington-Oregon. John R. Zimmerman and William D. Burton, August 1981. (PB82 127051)
- 169 A Statistical-Dynamical Model for Prediction of Tropical Cyclone Motion in the Eastern North Pacific Ocean. Preston W. Leftwich, Jr., October 1981. (PB82195298)
- 170 An Enhanced Plotter for Surface Airways Observations. Andrew J. Spry and Jeffrey L. Anderson, October 1981. (PB82 153883)
- 171 Verification of 72-Hour 500-MB Map-Type Predictions. R.F. Quiring, November 1981. (PB82-158098)
- 172 Forecasting Heavy Snow at Wenatchee, Washington. James W. Holcomb, December 1981. (PB82-177783)
- 173 Central San Joaquin Valley Type Maps. Thomas R. Crossan, December 1981. (PB82 196064)
- 174 ARAP Test Results. Mark A. Mathewson, December 1981. (PB82 198103)
- 176 Approximations to the Peak Surface Wind Gusts from Desert Thunderstorms. Darryl Randerson, June 1982. (PB82 253089)
- 177 Climate of Phoenix, Arizona. Robert J. Schmidli and Austin Jamison, April 1969 (Revised July 1996). (PB96-191614)
- 178 Annual Data and Verification Tabulation, Eastern North Pacific Tropical Storms and Hurricanes 1982. E.B. Gunther, June 1983. (PB85 106078)
- 179 Stratified Maximum Temperature Relationships Between Sixteen Zone Stations in Arizona and Respective Key Stations. Ira S. Brenner, June 1983. (PB83 249904)
- 180 Standard Hydrologic Exchange Format (SHEF) Version I. Phillip A. Pasteris, Vernon C. Bissel, David G. Bennett, August 1983. (PB85 106052)
- 181 Quantitative and Spacial Distribution of Winter Precipitation along Utah's Wasatch Front. Lawrence B. Dunn, August 1983. (PB85 106912)
- 182 500 Millibar Sign Frequency Teleconnection Charts - Winter. Lawrence B. Dunn, December 1983. (PB85 106276)
- 183 500 Millibar Sign Frequency Teleconnection Charts - Spring. Lawrence B. Dunn, January 1984. (PB85 111367)
- 184 Collection and Use of Lightning Strike Data in the Western U.S. During Summer 1983. Glenn Rasch and Mark Mathewson, February 1984. (PB85 110534)
- 185 500 Millibar Sign Frequency Teleconnection Charts - Summer. Lawrence B. Dunn, March 1984. (PB85 111359)

- 186 Annual Data and Verification Tabulation eastern North Pacific Tropical Storms and Hurricanes 1983. E.B. Gunther, March 1984. (PB85 109635)
- 187 500 Millibar Sign Frequency Teleconnection Charts - Fall. Lawrence B. Dunn, May 1984. (PB85-110930)
- 188 The Use and Interpretation of Isentropic Analyses. Jeffrey L. Anderson, October 1984. (PB85-132694)
- 189 Annual Data & Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1984. E.B. Gunther and R.L. Cross, April 1985. (PB85 1878887AS)
- 190 Great Salt Lake Effect Snowfall: Some Notes and An Example. David M. Carpenter, October 1985. (PB86 119153/AS)
- 191 Large Scale Patterns Associated with Major Freeze Episodes in the Agricultural Southwest. Ronald S. Hamilton and Glenn R. Luskky, December 1985. (PB86 144474AS)
- 192 NWR Voice Synthesis Project: Phase I. Glen W. Sampson, January 1986. (PB86 145604/AS)
- 193 The MCC - An Overview and Case Study on Its Impact in the Western United States. Glenn R. Luskky, March 1986. (PB86 170651/AS)
- 194 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1985. E.B. Gunther and R.L. Cross, March 1986. (PB86 170941/AS)
- 195 Radid Interpretation Guidelines. Roger G. Pappas, March 1986. (PB86 177680/AS)
- 196 A Mesoscale Convective Complex Type Storm over the Desert Southwest. Darryl Randerson, April 1986. (PB86 190998/AS)
- 197 The Effects of Eastern North Pacific Tropical Cyclones on the Southwestern United States. Walter Smith, August 1986. (PB87 106258AS)
- 198 Preliminary Lightning Climatology Studies for Idaho. Christopher D. Hill, Carl J. Gorski, and Michael C. Conger, April 1987. (PB87 180196/AS)
- 199 Heavy Rains and Flooding in Montana: A Case for Slantwise Convection. Glenn R. Luskky, April 1987. (PB87 185229/AS)
- 200 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1986. Roger L. Cross and Kenneth B. Mielke, September 1987. (PB88 110895/AS)
- 201 An Inexpensive Solution for the Mass Distribution of Satellite Images. Glen W. Sampson and George Clark, September 1987. (PB88 114038/AS)
- 202 Annual Data and Verification Tabulation Eastern North Pacific Tropical Storms and Hurricanes 1987. Roger L. Cross and Kenneth B. Mielke, September 1988. (PB88-101935/AS)
- 203 An Investigation of the 24 September 1986 "Cold Sector" Tornado Outbreak in Northern California. John P. Monteverdi and Scott A. Braun, October 1988. (PB89 121297/AS)
- 204 Preliminary Analysis of Cloud-To-Ground Lightning in the Vicinity of the Nevada Test Site. Carven Scott, November 1988. (PB89 128649/AS)
- 205 Forecast Guidelines For Fire Weather and Forecasters -- How Nighttime Humidity Affects Wildland Fuels. David W. Goens, February 1989. (PB89 162549/AS)
- 206 A Collection of Papers Related to Heavy Precipitation Forecasting. Western Region Headquarters, Scientific Services Division, August 1989. (PB89 230833/AS)
- 207 The Las Vegas McCarran International Airport Microburst of August 8, 1989. Carven A. Scott, June 1990. (PB90-240268)
- 208 Meteorological Factors Contributing to the Canyon Creek Fire Blowup, September 6 and 7, 1988. David W. Goens, June 1990. (PB90-245085)
- 209 Stratus Surge Prediction Along the Central California Coast. Peter Felsch and Woodrow Whitlatch, December 1990. (PB91-129239)
- 210 Hydrotools. Tom Egger, January 1991. (PB91-151787/AS)
- 211 A Northern Utah Soaker. Mark E. Struthwolf, February 1991. (PB91-168716)
- 212 Preliminary Analysis of the San Francisco Rainfall Record: 1849-1990. Jan Null, May 1991. (PB91-208439)
- 213 Idaho Zone Preformat, Temperature Guidance, and Verification. Mark A. Mollner, July 1991. (PB91-227405/AS)

- 215 WeatherTools. Tom Egger, October 1991. (PB93-184950)
- 216 Creating MOS Equations for RAWS Stations Using Digital Model Data. Dennis D. Gettman, December 1991. (PB92-131473/AS)
- 217 Forecasting Heavy Snow Events in Missoula, Montana. Mike Richmond, May 1992. (PB92-196104)
- 218 NWS Winter Weather Workshop in Portland, Oregon. Various Authors, December 1992. (PB93-146785)
- 219 A Case Study of the Operational Usefulness of the Sharp Workstation in Forecasting a Mesocyclone-Induced Cold Sector Tornado Event in California. John P. Monteverdi, March 1993. (PB93-178697)
- 220 Climate of Pendleton, Oregon. Claudia Bell, August 1993. (PB93-227536)
- 221 Utilization of the Bulk Richardson Number, Helicity and Sounding Modification in the Assessment of the Severe Convective Storms of 3 August 1992. Eric C. Evenson, September 1993. (PB94-131943)
- 222 Convective and Rotational Parameters Associated with Three Tornado Episodes in Northern and Central California. John P. Monteverdi and John Quadros, September 1993. (PB94-131943)
- 223 Climate of San Luis Obispo, California. Gary Ryan, February 1994. (PB94-162062)
- 224 Climate of Wenatchee, Washington. Michael W. McFarland, Roger G. Buckman, and Gregory E. Matzen, March 1994. (PB94-164308)
- 225 Climate of Santa Barbara, California. Gary Ryan, December 1994. (PB95-173720)
- 226 Climate of Yakima, Washington. Greg DeVoir, David Hogan, and Jay Neher, December 1994. (PB95-173688)
- 227 Climate of Kalispell, Montana. Chris Maier, December 1994. (PB95-169488)
- 228 Forecasting Minimum Temperatures in the Santa Maria Agricultural District. Wilfred Pi and Peter Felsch, December 1994. (PB95-171088)
- 229 The 10 February 1994 Oroville Tornado--A Case Study. Mike Staudenmaier, Jr., April 1995. (PB95-241873)
- 230 Santa Ana Winds and the Fire Outbreak of Fall 1993. Ivory Small, June 1995. (PB95-241865)
- 231 Washington State Tornadoes. Tresté Huse, July 1995. (PB96-107024)
- 232 Fog Climatology at Spokane, Washington. Paul Frisbie, July 1995. (PB96-106604)
- 233 Storm Relative Isentropic Motion Associated with Cold Fronts in Northern Utah. Kevin B. Baker, Kathleen A. Hadley, and Lawrence B. Dunn, July 1995. (PB96-106596)
- 234 Some Climatological and Synoptic Aspects of Severe Weather Development in the Northwestern United States. Eric C. Evenson and Robert H. Johns, October 1995. (PB96-112958)
- 235 Climate of Las Vegas, Nevada. Paul H. Skrbac and Scott Cordero, December 1995. (PB96-135553)
- 236 Climate of Astoria, Oregon. Mark A. McInerney, January 1996.
- 237 The 6 July 1995 Severe Weather Events in the Northwestern United States: Recent Examples of SSWEs. Eric C. Evenson, April 1996.
- 238 Significant Weather Patterns Affecting West Central Montana. Joe Lester, May 1996. (PB96-178751)
- 239 Climate of Portland, Oregon. Clinton C. D. Rockey, May 1996. (PB96-17603) - First Revision, October 1999
- 240 Downslow Winds of Santa Barbara, CA. Gary Ryan, July 1996. (PB96-191697)
- 241 Operational Applications of the Real-time National Lightning Detection Network Data at the NWSO Tucson, AZ. Darren McCollum, David Bright, Jim Meyer, and John Glueck, September 1996. (PB97-108450)
- 242 Climate of Pocatello, Idaho. Joe Heim, October 1996. (PB97-114540)
- 243 Climate of Great Falls, Montana. Matt Jackson and D. C. Williamson, December 1996. (PB97-126684)
- 244 WSR-88D VAD Wind Profile Data Influenced by Bird Migration over the Southwest United States. Jesus A. Haro, January 1997. (PB97-135263)
- 245 Climatology of Cape for Eastern Montana and Northern Wyoming. Heath Hockenberry and Keith Meier, January 1997. (PB97-133425)
- 246 A Western Region Guide to the Eta-29 Model. Mike Staudenmaier, Jr., March 1997. (PB97-144075)
- 247 The Northeast Nevada Climate Book. Edwin C. Clark, March 1997. (First Revision - January 1998 - Andrew S. Gorelow and Edwin C. Clark - PB98-123250)
- 248 Climate of Eugene, Oregon. Clinton C. D. Rockey, April 1997. (PB97-155303)
- 249 Climate of Tucson, Arizona. John R. Glueck, October 1997
- 250 Northwest Oregon Daily Extremes and Normans. Clinton C. D. Rockey, October 1997
- 251 A Composite Study Examining Five Heavy Snowfall Patterns for South-Central Montana. Jonathan D. Van Ausdall and Thomas W. Humphrey, February 1998. (PB98-125255)
- 252 Climate of Eureka, California. Alan H. Puffer, February 1998. (PB98-130735)
- 253 Inferred Oceanic Kelvin/Rossby Wave Influence on North American West Coast Precipitation. Martin E. Lee and Dudley Chelton. April 1998. (PB98-139744)
- 254 Conditional Symmetric Instability--Methods of Operational Diagnosis and Case Study of 23-24 February 1994 Eastern Washington/Oregon Snowstorm. Gregory A. DeVoir, May 1998. (PB98-144660)
- 255 Creation and Maintenance of a Comprehensive Climate Data Base. Eugene Petrescu. August 1998. (PB98-173529)
- 256 Climate of San Diego, California. Thomas E. Evans, III and Donald A. Halvorson. October 1998. (PB99-109381)
- 257 Climate of Seattle, Washington. Dana Felton. November 1998. (PB99-113482)
- 258 1985-1998 North Pacific Tropical Cyclones Impacting the Southwestern United States and Northern Mexico: An Updated Climatology. Armando L. Garza. January 1999. (PB99-130502)
- 259 Climate of San Jose, California. Miguel Miller. April 1999. (PB99-145633)
- 260 Climate of Las Vegas, Nevada. Paul H. Skrbac. December 1999
- 261 Climate of Los Angeles, California. David Bruno, Gary Ryan, with assistance from Curt Kaplan and Jonathan Slemmer. January 2000
- 262 Climate of Miles City, Montana. David A. Spector and Mark H. Strobin. April 2000
- 263 Analysis of Radiosonde Data for Spokane, Washington. Rocco D. Pelatti. November 2000
- 264 Climate of Billings, Montana. Jeffrey J. Zeltwanger and Mark H. Strobin. November 2000
- 265 Climate of Sheridan, Wyoming. Jeffrey J. Zeltwanger, Sally Springer, Mark H. Strobin. March 2001

- 266 Climate of Sacramento, California. Laura Masters-Bevan. December 2000 (7th Revision)
- 267 Sulphur Mountain Doppler Radar: A Performance Study. Los Angeles/Oxnard WFO. August 2001
- 268 Prediction of Heavy Snow Events in the Snake River Plain Using Pattern Recognition and Regression Techniques. Thomas Andretta and William Wojcik. October 2003
- 269 The Lewis and Clark Expedition 18-03-1806, Weather, Water and Climate, Vernon Preston, Pocatello Idaho, December 2004.
- 270 Climate of San Diego, California, Emmanuel M. Isla, September 2004 (2nd Edition)
- 271 Climate of Las Vegas, Nevada, Andrew S. Gorelow, January 2005, (2nd Edition)
- 272 Climate of Sacramento, California, Revised by: Laura A. Bevan and George Cline, June 2005
- 273 Climate of Flagstaff, AZ 4th Revision. Mike Staudenmaier, Jr, Reginald Preston(R) Paul Sorenson (R) , August 2005
- 274 Climate of Prescott, AZ, Bob Fogarty, Mike Staudenmaier Jr., Flagstaff WFO, AZ, August 2005.
- 275 Climate of San Diego, CA, 3rd Revision. Noel M. Isla, Jennifer Lee, March 2006
- 276 Climate of Reno, NV, Brian Ohara, Reno, NV October 2006
- 277 Forecaster's Handbook for Extreme Southwestern California Based On Short Term Climatological Approximations: Part I - The Marine Layer and Its Effect On Precipitation and Heating Ivory J. Small, October 2006
- 278 Forecaster's Handbook for Extreme Southwestern California Based On Short Term Climatological Approximations: Part II – Wind Effects on Terrestrial and Marine Environments Ivory J. Small, December 2006
- 279 Effects of Wildfire in the Mountainous Terrain of Southeast Arizona: An Empirical Formula to Estimate 5-Year Peak Discharge from Small Post-Burn Watersheds, William B. Reed and Mike Schaffner , June 2007
- 280 Climate of Fresno, California, Chris Stachelski, Gary Sanger, February 2008

NOAA SCIENTIFIC AND TECHNICAL PUBLICATIONS

The National Oceanic and Atmospheric Administration was established as part of the Department of Commerce on October 3, 1970. The mission responsibilities of NOAA are to assess the socioeconomic impact of natural and technological changes in the environment and to monitor and predict the state of the solid Earth, the oceans and their living resources, the atmosphere, and the space environment of the Earth.

The major components of NOAA regularly produce various types of scientific and technical information in the following kinds of publications.

PROFESSIONAL PAPERS--Important definitive research results, major techniques, and special investigations.

CONTRACT AND GRANT REPORTS--Reports prepared by contractors or grantees under NOAA sponsorship.

ATLAS--Presentation of analyzed data generally in the form of maps showing distribution of rainfall, chemical and physical conditions of oceans and atmosphere, distribution of fishes and marine mammals, ionospheric conditions, etc.

TECHNICAL SERVICE PUBLICATIONS --Reports containing data, observations, instructions, etc. A partial listing includes data serials; prediction and outlook periodicals; technical manuals, training papers, planning reports, and information serials; and miscellaneous technical publications.

TECHNICAL REPORTS--Journal quality with extensive details, mathematical developments, or data listings.

TECHNICAL MEMORANDUMS--Reports of preliminary, partial, or negative research or technology results, interim instructions, and the like.

Information on availability of NOAA publications can be obtained from:
