# NARRATIVE CLIMATOLOGICAL SUMMARY FOR ELY, NEVADA

Ely, with a population of 4,255 as of the 2010 US Census, is located in central White Pine County in east-central Nevada. It is located in the southern portion of the Great Basin, a massive area which includes most of Nevada and parts of California, Oregon, Idaho and Utah. All streams and rivers in this region flow into salt lakes or dry lake beds, from which no water leaves except through seepage and evaporation.

View of downtown Ely, Nevada. Photo by author.

On a more local scale, Ely is situated in the Steptoe Valley, a broad north-south valley typical of the Basin and Range geologic province. A smaller valley, the Smith Valley, branches off to the northwest just north of the downtown Ely. Sitting at 6,262 feet above sea level, White Pine County Airport (also known as Ely Airport/Yelland Field) serves as the official weather station for Ely and is located 4 miles northeast of downtown Ely near the junction of Steptoe and Smith valleys. To the immediate west of Ely is the Egan Range, which reaches a peak elevation of 10,941 feet atop Ward Mountain about 10 miles south-southwest of downtown Ely. To the immediate east of Ely is the Duck Creek Range, a somewhat less prominent mountain range with peaks generally below 9,000 feet.

The vegetative pattern in the valleys of the Ely area is known as “sagebrush-steppe” and is dominated by sagebrush, rabbitbrush, and perennial grasses. Lower mountain slopes in the area are covered with thin miniature forests of Utah Juniper and Singleleaf Pinyon Pine trees, while the higher slopes support groves of Aspen, Whitebark and Limber Pine, White Fir and Englemann Spruce.

Topographic map of the Ely, Nevada area. Map by USGS.

The climate of Ely is most simply described as being a “high desert” type. High temperatures are very warm in the summer, with values sometimes exceeding 90 degrees; however, they are much colder in the winter with readings often staying below 40 degrees. Lows in the summer are quite cool, with readings commonly in the 40s; in the winter they frequently fall into the single digits. Individual days often have large ranges in temperature, with 30 degree diurnal ranges common in the winter and 40 or more degree ranges common in summer. These large daily ranges are due to the combination of Ely’s high elevation, location in a valley, and generally low humidity. It is also one reason why the growing season is usually quite short, with an average length of about 80 days each year. The last freezing temperature in the spring typically occurs in mid June, with the first freezing temperature of fall usually happening in early September.

Another somewhat unusual aspect of the temperature regime in Ely is the asymmetric annual temperature curve. On average, the lowest temperatures of the year are experienced just after the winter solstice in late December. From there, a slow but fairly steady warming trend begins and continues straight into late July before leveling off. Starting in August, average temperatures plummet rapidly toward their minimum values in late December. This has the effect of making the spring noticeably longer than autumn. The unusual annual pattern is due to the commonality of upper-level low pressure systems parking themselves over the Intermountain West during the spring, which tends to keep the region cooler than the continental climate of the region might otherwise suggest. These low pressure systems are not often present in the autumn, allowing the rapid temperature drop which is to be expected in an arid to semi-arid region.

Graph of the normal (1981-2010) average temperature in Ely.

The large Sierra Nevada mountain range located far to the west-southwest greatly diminishes the moisture available for precipitation from Pacific storm systems. The local mountain ranges can also cause small-scale rain shadows. Meanwhile, monsoon moisture which typically flows northward from the tropical Pacific and Gulf of Mexico sometimes stays to the south and east of Ely. These factors combine to result in a semi-arid climate, with most precipitation that does fall being showery in nature. No obvious dry or wet season exists in Ely as precipitation is distributed throughout the year; however, the spring and fall tend to be somewhat wetter than the summer and winter. Unusually heavy precipitation events with totals in excess of 1 inch are quite rare and

generally happen only once every few years. Thunderstorms are most common during the summer months, and are usually caused by passing cold fronts, monsoon moisture from the Southwest, or a cold upper-level low pressure system. Thunderstorms which are caused by strong monsoon moisture surges can occasionally produce heavy rain and flooding, while “dry thunderstorms” (those with less than 0.10” of rainfall) can cause wildfires during the summer.

Graph of the normal (1981-2010) monthly precipitation in Ely.

Snowfall can be heavy during the winter and snow can often persist on the ground for an extended period of time. Heavy snowfalls of 6 inches or greater usually happen several times every year. Freezing rain and ice pellets are extremely rare. However, graupel is somewhat common, especially during the spring.

Winds are typically diurnally influenced, with a northerly “up-valley” wind occurring sometimes during the afternoon and a southerly “down-valley” wind common during the early morning. Strong damaging winds usually occur either ahead of or during the passage of a strong cold front, or during thunderstorms. However, Ely’s location at the bottom of a valley tends to prevent the strongest winds from reaching the city most of the time. This ensures that severe winds in excess of 58 mph are a relatively rare event in Ely, with only one or two occurrences in a given year on average. Dust storms in Ely are rare, due primarily to a lack of large scale dust sources such as dry lake beds in the area.

Skies are often mostly clear for many days in a row during the summer and autumn, with clouds more likely to dim the sun during the winter and spring. During the spring and summer it is not uncommon for days to start out clear and then become cloudy by day's end due to convection.

# HISTORY OF WEATHER OBSERVATIONS IN ELY, NEVADA

Ely is among the oldest Nevada weather stations that are still in service to the present day. The first weather station, in the form of a volunteer “cooperative” station, was established at the White Pine County Court House in downtown Ely on January 1, 1888. For the next 24 years, volunteer observers either working at, or living very close to, the court house in downtown Ely recorded weather data. The volunteer nature of this weather station did pose some difficulties, however. Firstly, daily weather records are only available back to 1893; while earlier records may still exist, they have not been located as of this writing. Secondly, as sometimes occurs with volunteers, there are a great many data gaps and some questionable readings. Thirdly, as also sometimes occurs with volunteers, the station was closed in September 1912 as no new observer could be located after the previous one quit. For these reasons, the data from the early period of record presented here (January 1, 1893 to August 31, 1912) should be used with caution.

Fortunately for the sake of data quality and consistency, the needs of the aviation industry resulted in their establishment of an official government observing site at Ely Airport (White Pine County Airport - Yelland Field) on October 12, 1938. The observing instruments, now mostly automated, remain at the airport to this day. The automated station is not capable of measuring snowfall, so an observer located a few miles southwest of the airport is responsible for measuring snowfall at present.

Below is a description of the locations used for official observations in Ely since 1888:

<b><u>Location</u></b>	<b><u>Dates occupied</u></b>
<b>White Pine County Court House</b>	<b>January 1, 1888 – August 31, 1912</b>
<b>Yelland Field (County Airport)</b>	<b>October 12, 1938 - May 31, 1994</b>
<b>Automated Surface Observing System (County Airport)</b>	<b>June 1, 1994 - present</b>

The old Ely Weather Service Office at the White Pine County Airport (currently occupied by Ely Helitack).

The Automated Surface Observing System (ASOS) at the White Pine County Airport currently produces the official weather observations for Ely.

# ANNUAL DAILY AVERAGE TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# AVERAGE ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# AVERAGE ANNUAL DAILY MINIMUM TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# HIGHEST ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# 10 WARMEST DAILY MAXIMUM TEMPERATURES, ALL-TIME AND BY MONTH ELY

# LOWEST ANNUAL DAILY MAXIMUM TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may also have been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# HIGHEST ANNUAL DAILY MINIMUM TEMPERATURES (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may also have been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

## ANNUAL FREQUENCY OF DAILY MINIMUM TEMPERATURES OF 32F OR LOWER (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may also have been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# ANNUAL FREQUENCY OF DAILY MAXIMUM TEMPERATURES OF 32F OR LOWER (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may also have been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# LENGTH OF PERIOD BETWEEN LAST AND FIRST MINIMUM TEMPERATURE OF 32F (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# TOTAL ANNUAL PRECIPITATION (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

## WATER YEAR PRECIPITATION (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# ANNUAL MAXIMUM DAILY PRECIPITATION (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# 10 HIGHEST ONE-DAY PRECIPITATION TOTALS, ALL-TIME AND BY MONTH

## ELY

NOTE: \* indicates value also occurred previously

# ANNUAL MAXIMUM TWO-DAY PRECIPITATION (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# 10 HIGHEST TWO-DAY PRECIPITATION TOTALS, ALL-TIME AND BY MONTH

## ELY

NOTE: \* indicates value also occurred previously

# ANNUAL FREQUENCY OF DAILY PRECIPITATION OF 0.01 INCH OR MORE (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# ANNUAL FREQUENCY OF DAILY PRECIPITATION OF 0.10 INCH OR MORE (GRAPHED) ELY

Note: Data may have been affected by the relocation of the observing site from downtown Ely to White Pine County Airport in October 1938. Data may have also been affected by the change from a voluntary, part-time observer program to a paid, full-time observer program which also occurred in October 1938. Use graph with caution.

# ANNUAL NUMBER OF DAYS WITH FOG (GRAPHED) ELY

## ACKNOWLEDGEMENTS

The author would like to thank the staff of the National Weather Service Forecast Office in Elko for providing support to this project. Specifically, he would like to thank Ryan Knutsvig, Science and Operations Officer, and Michael Fitzsimmons, Acting Meteorologist-in-Charge, for reviewing this work.

The author would also like to thank Christopher Stachelski, Climate Focal Point at NWSFO Las Vegas, for inspiration and suggestions.

Finally, the author would like to thank Keith Eggleston at the Northeast Regional Climate Center and Bryant Korzeniewski at the National Climatic Data Center, who have endured my nearly endless edits to the NCDC and NRCC databases which have allowed me to produce this work much more easily than would have otherwise been possible.
