## *Tips for Providing Older Adult Care*

### Exercise with Dementia

#### Why is Exercise is Important ?

Exercise keeps our bodies in shape. It keeps our muscles, joints, and everything inside of us working better. It also helps us lose weight, sleep better, and it can improve our mood.

Exercise is important for someone with dementia. It helps them feel better, and helps them to do more things for themselves, for as long as possible. It helps with strength, balance, and flexibility. Some research says that exercising every day might help people with mild dementia to keep their memory and thinking skills longer.

#### Staying Safe with Exercise

Make sure someone living with dementia is safe while exercising. If possible, they should exercise with someone else. This is very important if they take medicine that might make them feel dizzy, or if they get tired easily. If they do exercise alone, ask them to wear an ID bracelet with your phone number. Comfortable clothes and shoes that fit well are also important.

Several 10-minute workouts may be best, instead of one long one. Drinking plenty of water is important. Drink before and after exercise.

#### Tips for Helping Someone with Dementia Stay Active

Take a walk together	Throw a rubber ball back and forth
Turn on some music and dance	Use stretching bands
Use a stationary bicycle	Use soup cans as weights
Join an exercise program that is designed for older adults with dementia	Clean the house together
Build a garden	Grocery shop together

This Care Partner Information page is part of a series on older adult caregiving tips. They are written to help family and community caregivers, direct care workers and community health representatives care for older adults. ## Care Partner Information

Here are some exercises to try at home. Start with one set and build up from there.

### Toe Stands

Hold the backrest of a sturdy chair and stand hip width apart.  
Lift your heels as much as possible then bring them back to floor.  
Repeat this movement 10 times for one set.  
Rock back on your heels and lift your toes to stretch between sets.

### Chair Sit to Stand to Sit

Sit on a sturdy chair and cross your arms on the chest.  
Rise from the chair to a fully up right position and then slowly  
return to a sitting position.  
Repeat this movement 10 times for one set.  
If needed, use an armrest to make this exercise easier.

### Stair Steps

Hold the handrail of a staircase for safety.  
Step up on a step one foot at a time.  
Step down one foot at a time.  
Repeat 10 times alternating the leading foot.  
Rest and repeat another 10 times for one set.
