

CDAWeb Tutorial

This tutorial guides you through a typical CDAWeb session using TIMED GUVI parameters as example.

(1) Use your favorite internet browser to go to

Coordinated Data Analysis Web (CDAWeb)

Public data from current space physics missions

The full CDAWeb data service with [multiple database views](#) directly supports graphics, digital listings and simultaneous multi-mission, multi-instrument selection and comparison of science data among a wide range of current space missions, including ACE, Cluster, Equator-S, FAST, Geotail, IMAGE, IMP-8, ISTP (Polar and Wind), Interball (Tail and Aurora), SAMPEX, SOHO and Ulysses. CDAWeb also supports data from geosynchronous satellites including GOES 6/7/8/9/10 and LANL, 1989/1990/1991/1994/1997; from ground-based facilities including CANOPUS, DARN, the Finnish Meteorological Institute and SESAME; from older space missions including Dynamics Explorer (DE-1, DE-2), Hawkeye, and ISIS; and for key data dedicated to use by specific science teams, including the Cluster Prime Parameters.

Please select one or more data sources, OR one or more instrument types, OR a combination of data sources and instrument types from those data sources, and then click "Submit".
