Annual Report

FY2016

The mission of **the CAIC** is to provide avalanche information, education and promote research for the protection of life, property and the enhancement of the state's economy.

The Colorado Avalanche Information Center (CAIC) is a program of the Colorado Department of Natural Resources (DNR). The program is a partnership between the DNR, Department of Transportation (CDOT), and the Friends of the CAIC (FoCAIC), a 501c3 group. The mission of the CAIC is to provide avalanche information, education, and promote research for the protection of life, property and the enhancement of the state's economy. With plenty of snow and five fatal avalanche accidents, the 2016 avalanche year brought significant challenges and changes to the forecasting and education portions of the program.

There were several significant operational changes during the 2016 fiscal year. CDOT installed two arrays of Gazex remote-avalanche release systems on Berthoud and Loveland Passes. This dramatically changed highway operations in these areas. With CDOT's support we increased the number of vehicles and radio capabilities available for avalanche forecasting and emergency response. Support from the FoCAIC allowed us to create a position focused on the Steamboat and northern Front Range zones. Our combined effort with the FoCAIC on the Know Before You Go program brought avalanche education to over 9,000 school kids.

Snowfall during the 2016 avalanche year was near or above average throughout the mountain areas of Colorado. Ample early season snowfall and an extended warm and dry period in late February and early March contributed to a relatively stable snowpack. Documented avalanche involvements were below average. Although there were a few cycles that produced large avalanches, we never saw a significant deep-slab avalanche cycle and eased into the summer without a significant wet avalanche cycle. The five fatal accidents during the 2016 avalanche year were associated with large storm events over a three week period from mid January to early February. These accidents have devastating effects on the family and friends of the people caught in these tragic events. They are a constant reminder of the threat we work to address, and the people we strive to help.

The number of people that travel in the mountains of Colorado during the avalanche season continues to increase. To address their needs and the avalanche threat to public safety, we will continue to build partnerships, improve the quality and accessibility of avalanche forecasts and education programs throughout the great state of Colorado. Thank you for your help and support in the past and we look forward to serving you in the future.

Sincerely,

Ethan Greene
Director
Colorado Avalanche Information Center

The mission of **the Friends of CAIC** is to support avalanche forecasting and education throughout the State of Colorado.

Dear Friend,

It's time for us to get ramped up for the 2016/2017 season and we could not be more excited about the upcoming winter! Once again we have seen some changes over the summer and are very excited about the growth of both the Friends of CAIC and the CAIC.

The Colorado Avalanche Information Center would not exist in its current capacity without your support. Since the program began in the early 1970's, it has relied on the local community for support. Over the years, backing from our public and private partners has been essential to the CAIC's backcountry avalanche safety program. At first you helped us keep the doors open and the lights on. Now you are helping us provide cutting edge backcountry forecasting services and education programs.

Our goal is simple: raise money to keep expanding our forecasting operations and broaden our education programming here in Colorado.

Your help in the past has been amazing. Thank you! That being said, we still need your help this year and in the years to come as we strive to address the ever changing needs and growing number of winter sports enthusiasts in Colorado. We value you as a partner and with your help we will continue to provide the best service to the people that live, work, and play in the Colorado mountains.

Cheers,

Aaron Carlson

The Financial Breakdown

The CAIC and FoCAIC Partnership

The relationship between the CAIC and the Friends of CAIC is an important public-private partnership that provides backcountry avalanche forecasts for everyone in Colorado—as well as; avalanche education for as many people as we can reach. The partnership allows FoCAIC staff to go to events, write grants, and build partnerships on behalf of the mission. And it keeps the CAIC staff in the snow so they can provide the best avalanche forecasts possible for you, the user.

The FoCAIC is a 501(c)3 non-profit organization that was created to financially support avalanche forecasting and education throughout Colorado. We accomplish this through fundraising that includes grant writing, events, individual fundraising, corporate partnerships, and our annual spring fundraising campaign. The FoCAIC has 1 full time staff member that works out of a home office and on the road throughout the winter. They also have a small Board of Directors that guides the mission of the organization and oversees the ED. The FoCAIC is the private side of the partnership.

The CAIC is a program within the Colorado Department of Natural Resources, a state government agency. They have 20 staff that work out of 10 offices that cover the mountainous areas of Colorado. The CAIC is the public side of the partnership. The mission of the CAIC is to provide avalanche information, education and promote research for the protection of life, property and the enhancement of the state's economy. These are the folks that produce the weather and backcountry avalanche forecasts. They teach avalanche classes to school kids, university students, and avalanche workers. The CAIC also works with CDOT to reduce the threat of avalanches to the State Transportation System.

The CAIC's highway operations are funded and conducted through an intergovernmental agreement with the Colorado Department of Transportation (CDOT) to provide training and forecasting for highway maintenance operations. The CAIC's backcountry forecasting operations are funded through several different avenues including; The Severance Tax Fund, fees for providing avalanche training to professional groups, and from the fundraising efforts of the Friends of CAIC. The FoCAIC support allows for a more robust backcountry forecasting and education program here in Colorado. The current program could not have been built with tax dollars alone. We need a strong public-private partnership to sustain it and hopefully improve it in the future.

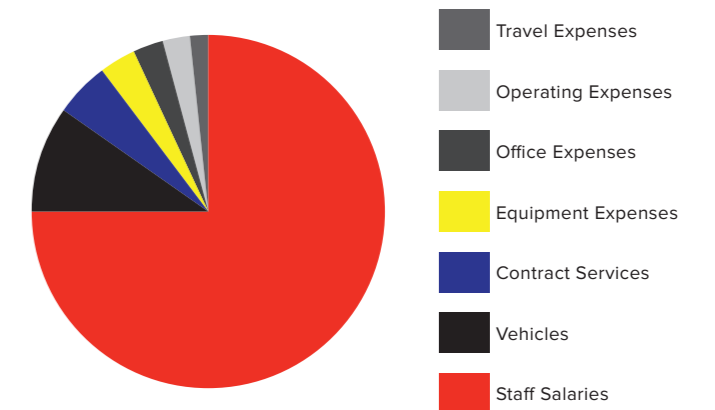

CAIC Revenue & Expenditures FY2016

In fiscal year 2016, CAIC had \$1,429,180.88 in expenditures and collected \$1,470,820.61 in revenue. Of the revenue received, \$192,326.59 was received from the ski industry, the Friends of the CAIC, and individual citizens. The remaining revenue (\$1,278,494.02) came from federal, state, and local governments. The difference between our revenue and expenditures gave us a net increase in our donation fund of \$41,639.73, which is earmarked for projects that will support our forecasting and education programs.

Friends of CAIC Program Expense Label Definitions

CAIC Backcountry Forecasting Operations

The FoCAIC makes a donation each year directly to the CAIC. This money pays for part of the CAIC's backcountry forecasting operation. Seasonal backcountry forecaster positions cost the CAIC about \$50,000 per position, per season. This cost includes salary, office space, travel, equipment, and training.

KBYG Educational Program

Know Before You Go is our avalanche awareness program. We offer free avalanche education throughout the state of Colorado. The program is designed for 8th graders, but since November we've presented it to over 8,200 people of all ages. The cost of this program includes the initial production and development of the education materials and money to pay instructors. We are now investing money in further development of new educational materials to ensure the program stays accurate, stays relevant, and can reach any group that needs more information on avalanche safety.

FoCAIC Staff

The Friends of CAIC had one full time employee, the Executive Director, during the 2015/2016 season. The ED spends his time raising money for the FoCAIC through events, grant writing, partnerships and outreach. The ED also manages the KBYG education program and works on collaborative efforts with the staff of the CAIC.

Website and App Services

The Friends of CAIC help support the CAIC website and mobile app. This includes hosting, maintenance and further development for both platforms. The CAIC website backend and database are over 10 years old. The system needs to be updated and we'll be working on that over the summer. This sort of development is expensive but necessary to produce a quality product for you. We expect to spend more money on better technology so you can get avalanche forecasts and share snow, weather, and avalanche information in the future.

Colorado Snow and Avalanche Workshop (CSAW)

CSAW is a one-day professional development seminar for people working in avalanche safety. It provides a venue for avalanche workers – ski patrollers, avalanche forecasters, road maintenance personnel, ski guides, avalanche education instructors, undergraduate and graduate students, and applied researchers – to listen to presentations and discuss new ideas, techniques and technologies with their colleagues. The meeting is open to anyone. Last year 700 people attended the workshop!

CAIC Staff Education and Training

This category covers any expense we incur for supporting CAIC staff training. Training and education includes such things as paying for some staff to attend the International Snow Science Workshop, European Warning Service meeting, and other education or training opportunities.
