NOAA, DOE Sign Agreement to Advance Marine CO2 Removal

TOPIC: Environment

Washington, DC, June 6, 2024. Today, NOAA and the U.S. Department of Energy (DOE) signed a memorandum of agreement (MOA) on future collaborations regarding marine carbon dioxide removal research and development. As a climate solution, marine carbon dioxide removal is an important pathway to achieve the broader Biden Administration goal for the U.S. to reach net-zero emissions of greenhouse gases by 2050.

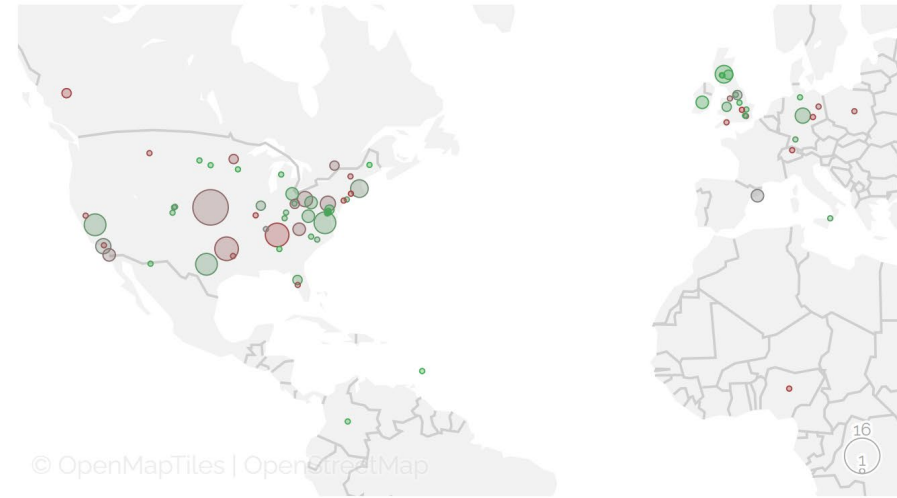

This MOA will formalize collaboration between NOAA and DOE to share expertise on research and technology development, as well as avoid duplicative work. The MOA makes clear that combining the ocean science expertise of NOAA with the carbon dioxide removal and energy science and technology expertise of DOE will be a powerful way to advance the state of marine carbon dioxide removal science and strengthen the existing relationship between both agencies.

“The science is clear,” said NOAA Administrator Rick Spinrad, Ph.D. “In order to limit global warming to 1.5C or even 2C, we not only have to bring our emissions of greenhouse gases to net-zero rapidly, but we also must remove carbon dioxide from the atmosphere. This MOA, utilizing the great strengths of

Success Metrics – U.S. Department of Commerce

News and social media channels represent important interfaces to customers and stakeholders. webLyzard's award-winning Web intelligence platform analyzes and visualizes emerging trends across these channels.

To support decision makers, we identify relevance and sentiment of online content, measure brand reputation and provide the industry's most advanced communication success metric.

Given the intense attention that online media channels attract these days, key questions for large organizations such as NOAA are how stakeholders perceive specific issues, how opinion leaders react to new insights, and how journalists present scientific knowledge to the public. The metrics and visualizations of webLyzard have proved invaluable for addressing these questions.
