Candidate Standard 5100.10-2009

The Printer Working Group

# The Printer Working Group (PWG)

## Internet Printing Protocol Version 2.0 (IPP/2.0)

**Status: Approved**

**Abstract:** Since the release of IPP/1.1 (RFC 2910 and RFC 2911), numerous extensions to the IPP protocol have been published as IETF RFCs or PWG Candidate Standards. Many IPP developers are not aware of the existence of the many of these extensions, and there is no published document that references all of the extension specifications. As a consequence, only some of the extensions have been implemented.

This specification combines most of the previous IPP IETF or PWG IPP extensions into either a new base IPP/2.0 conformance level or a new extended IPP/2.1 conformance level. No new IPP functionality, beyond that defined in the previous IPP extensions, is specified in this document.

Implementation of this specification will allow printing applications to easily determine the capabilities of an IPP Printer without the need for extensive queries to the IPP Printer.

This document is a PWG Candidate Standard. For a definition of a "PWG Candidate Standard", see

<ftp://ftp.pwg.org/pub/pwg/general/pwg-process30.pdf>

This document is available at:

<ftp://ftp.pwg.org/pub/pwg/candidates/cs-ipp20-20090731-5100.10.pdf>

**Copyright (C) 2009, The Printer Working Group. All rights reserved.**

This document may be copied and furnished to others, and derivative works that comment on, or otherwise explain it or assist in its implementation may be prepared, copied, published and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice, this paragraph and the title of the Document as referenced below are included on all such copies and derivative works. However, this document itself may not be modified in any way, such as by removing the copyright notice or references to the IEEE-ISTO and the Printer Working Group, a program of the IEEE-ISTO.

Title: Internet Printing Protocol Version 2.0

The IEEE-ISTO and the Printer Working Group DISCLAIM ANY AND ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED INCLUDING (WITHOUT LIMITATION) ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

The Printer Working Group, a program of the IEEE-ISTO, reserves the right to make changes to the document without further notice. The document may be updated, replaced or made obsolete by other documents at any time.

The IEEE-ISTO takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights.

The IEEE-ISTO invites any interested party to bring to its attention any copyrights, patents, or patent applications, or other proprietary rights which may cover technology that may be required to implement the contents of this document. The IEEE-ISTO and its programs shall not be responsible for identifying patents for which a license may be required by a document and/or IEEE-ISTO Industry Group Standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention. Inquiries may be submitted to the IEEE-ISTO by e-mail at:

[ieee-isto@ieee.org](mailto:ieee-isto@ieee.org).

The Printer Working Group acknowledges that the IEEE-ISTO (acting itself or through its designees) is, and shall at all times, be the sole entity that may authorize the use of certification marks, trademarks, or other special designations to indicate compliance with these materials.

Use of this document is wholly voluntary. The existence of this document does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to its scope.

### **About the IEEE-ISTO**

The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with the IEEE (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

For additional information regarding the IEEE-ISTO and its industry programs visit <http://www.ieee-isto.org>.

### **About the IEEE-ISTO PWG**

The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization (ISTO) with member organizations including printer manufacturers, print server developers, operating system providers, network operating systems providers, network connectivity vendors, and print management application developers. The group is chartered to make printers and the applications and operating systems supporting them work together better. All references to the PWG in this document implicitly mean "The Printer Working Group, a Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of their work as open standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these standards.

In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has multiple, independent and interoperable implementations with substantial operational experience, and enjoys significant public support.

For additional information regarding the Printer Working Group visit: <http://www.pwg.org>

# 1 Introduction (Informative)

The original IPP/1.0 protocol specifications, [RFC2565] and [RFC 2566], were published by the IETF in April 1999. The subsequent IPP/1.1 protocol specifications, [RFC2910] and [RFC2911], were published by the IETF in September 2000. Since the publication of IPP/1.1, numerous IETF or PWG IPP extension specifications have been approved and published.

## 1.1 New IPP Versions

The purpose of this document is to provide a single reference to most of the existing IETF or PWG IPP extension specifications and to define new IPP versions that provide simple statements of the capabilities of an IPP Printer.

In sections 5 and 6, this document defines the new IPP/2.0 and IPP/2.1 conformance levels. Below is a brief informal description of the targeted printing environments:

**IPP/2.0** – This IPP conformance level is targeted to an environment where a small number of users are typically physically located close to the device and the device is typically managed by the local users. The device is typically a low speed IPP/2.0 Printer with a limited feature set tailored to the requirements of a small group of users. Routine maintenance, such as loading paper and clearing paper jams, is usually performed by the current user. The configuration of the IPP/2.0 Printer for special jobs, such as the need for a unique paper size or color, is also handled by the user requiring the changed configuration.

**IPP/2.1** – This IPP conformance level is targeted to an environment with more users and devices with higher speed and duty cycle ratings than IPP/2.0 Printers, but the primary difference is in the supported features, physical location, and maintenance of the device. A IPP/2.1 Printer is typically located in a central location with most users not very close physically. An End User's access to the IPP/2.1 Printer may be limited and maintenance is typically performed by assigned, trained personnel. Features such as paper size and type are typically fixed by site policies and are not easily modified for special use. IPP/2.1 Printers often have more post-processing features (such as punching, folding, stapling, etc.) than IPP/2.0 Printers.

## 2 Terminology

### 2.1 Conformance Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as defined in [RFC2119].

### 2.2 Printing Terminology

Normative definitions and semantics of printing terms are imported from IETF Printer MIB v2 [RFC3805], IETF Finisher MIB [RFC3806], and IETF IPP/1.1 [RFC2911].

This document also defines the following protocol roles in order to specify unambiguous conformance requirements:

IPP Client - Initiator of outgoing IPP session requests and sender of outgoing IPP operation requests (HTTP/1.0 Client [RFC1957] / HTTP/1.1 Client [RFC2616]).

IPP Printer - Listener for incoming IPP session requests and receiver of incoming IPP operation requests (HTTP/1.0 Server [RFC1957] / HTTP/1.1 Server [RFC2616]).

## 3 Requirements

Per the PWG Process, this section specifies the formal rationale for developing an IPP/2.0 specification, based on existing printing industry standards. This section also describes simple use models for IPP/2.0 and IPP/2.1 environments.

### 3.1 Rationale for IPP/2.0

The Printer MIB v2 [RFC3805] and Port Monitor MIB [PWG5107.1] define:

- (a) Model of Print Devices
- (b) Operations for Print Devices
  - prtGeneralReset
  - prtConsoleDisable
- (c) Groups of simple attributes for Print Devices
  - prtInputTable --> prtInputName
  - ppmPortTable --> ppmPortServiceNameOrURI
- (d) Conformance requirements for implementations of Printer MIB v2 and Port Monitor MIB

The IPP/1.1 Model and Semantics [RFC2911] defines:

- (a) Model of Print Services, Print Devices, and Print Jobs
- (b) Operations for Print Services and Print Jobs
  - Pause-Printer
  - Print-Job
- (c) Attributes for Print Services and Print Jobs
  - printer-location
  - job-id
- (d) Conformance requirements for implementations of IPP/1.1

The IPP/1.1 Encoding and Transport [RFC2910] defines:

- (a) Protocol Bindings for IPP/1.1
  - HTTP with optional upgrade to TLS
- (b) Mappings of operations for Print Services and Print Jobs.
- (c) Conformance requirements for implementations of IPP/1.1

Later IETF and PWG standards-track specifications defined numerous IPP/1.1 extensions including:

- (a) New operations
  - Set-Printer-Attributes [RFC3380]
  - Resume-Job [RFC3998]
- (b) New attribute syntaxes
  - collection [RFC3382]
- (c) New objects
  - Subscription [RFC3995]

Therefore an IPP/2.0 specification should:

- (a) Standardize profiles of the IPP/1.1 extensions for advanced printing functionality and reliable interoperability
- (b) Encourage adoption of modern IPP-based printing infrastructures
- (c) Discourage the further proliferation of vendor proprietary IPP operations and attributes that damage IPP interoperability by duplicating IETF or PWG IPP standard operations and attributes

## **3.2 Use Models**

See the informal description of IPP/2.0 and IPP/2.1 printing environments in section 1.1.

### **3.2.1 IPP/2.0 Printer**

Alice, Bob, and Charlie are graphic artists who share a printer down the hall. They all load paper when needed. Alice and Bob have convinced Charlie that he should load the toner cartridges. But they do use many paper sizes - they need PWG Media Standardized Names [PWG5101.1] used in the IPP 'media' attribute.

### **3.2.2 IPP/2.1 Printer**

Joe and his colleagues send large documents to a printer in a building across the street in a 'glasshouse' with some web servers.

Both Joe and the operator Sue in the glasshouse manage lots of jobs - they need to hold and release jobs. Joe wants to keep track of his jobs - he needs to subscribe for job events.

Sue is expected to manage several printers - she needs to enable and disable printers (i.e., enable/disable accepting new jobs over input channels).

## 4 Required IPP Standards

This section specifies the IPP standards required at each IPP version level. Each IPP version level requires support for the complete required functionality of all lower versions (by intentional design).

### 4.1 Version 1.0

An IPP/1.0 Printer must support the following specifications.

- [RFC2565] Internet Printing Protocol/1.0: Encoding and Transport
- [RFC2566] Internet Printing Protocol/1.0: Model and Semantics

### 4.2 Version 1.1

The IPP/1.1 protocol specifications supersede and obsolete the IPP/1.0 protocol specifications. An IPP/1.1 Printer must support the following specifications.

- [RFC2910] Internet Printing Protocol/1.1: Encoding and Transport
- [RFC2911] Internet Printing Protocol/1.1: Model and Semantics
- [RFC3510] Internet Printing Protocol: IPP URL Scheme

### 4.3 Version 2.0

An IPP/2.0 Printer MUST support the IPP specifications required for IPP/1.1 plus the following.

- [PWG5100.1] Internet Printing Protocol: "finishings" attribute values extension
- [PWG5100.2] Internet Printing Protocol: "output-bin" attribute extension
- [PWG5101.1] PWG Standard for Media Size Names (for "media" attribute)

### 4.4 Version 2.1

An IPP/2.1 Printer MUST support the IPP specifications required for IPP/2.0 plus the following.

- [RFC3380] Internet Printing Protocol: Job and Printer Set Operations
- [RFC3381] Internet Printing Protocol: Job Progress Attributes
- [RFC3382] The 'collection' Attribute Syntax (for "media-col" and other attributes)
- [RFC3995] Internet Printing Protocol: Event Notifications and Subscriptions
- [RFC3996] Internet Printing Protocol: The 'ippget' Delivery Method for Event Notifications
- [RFC3998] Internet Printing Protocol: Job and Printer Administrative Operations
- [PWG5100.3] Internet Printing Protocol: Production Printing Attributes – Set 1 (for "media-col" attributes only)
- [PWG5100.7] Internet Printing Protocol: Job Extensions
- [PWG5100.9] Internet Printing Protocol: Printer State Extensions

## 5 Required IPP Operations

IPP/2.0 and IPP/2.1 specify higher conformance requirements for some IPP Operations in comparison to previous IPP specifications. Many IPP Operations were defined in their source specifications as optional. If they remained optional in this specification, the desired interoperability objective would not be achieved.

### 5.1 Original Required IPP Version 1.1 Operations

The following IPP Operations were originally specified as required in their respective source documents. For IPP/2.0 and higher implementations, all of these operations (except Validate-Job) MUST also be implemented if the source specification is included in the particular IPP version implemented.

**Table 1 - Required Operations in IPP 1.1**

Code	Operation Name	Source	IPP Version
0x0002	Print-Job	[RFC2911]	IPP/2.0
0x0004	Validate-Job	[RFC2911]	IPP/2.0
0x0008	Cancel-Job	[RFC2911]	IPP/2.0
0x0009	Get-Job-Attributes	[RFC2911]	IPP/2.0
0x000A	Get-Jobs	[RFC2911]	IPP/2.0
0x000B	Get-Printer-Attributes	[RFC2911]	IPP/2.0
0x0016	Create-Printer-Subscriptions	[RFC3995]	IPP/2.1
0x0018	Get-Subscription-Attributes	[RFC3995]	IPP/2.1
0x0019	Get-Subscriptions	[RFC3995]	IPP/2.1
0x001A	Renew-Subscription	[RFC3995]	IPP/2.1
0x001B	Cancel-Subscription	[RFC3995]	IPP/2.1
0x001C	Get-Notifications	[RFC3996]	IPP/2.1

## 5.2 Required and Optional IPP Version 2.0 Operations

The following IPP Operations are included in their respective source documents. The conformance requirements for each IPP Operation in an IPP/2.0 implementation are defined below. Note that an IPP/2.0 implementation MAY also include support for additional IPP operations other than those specified in this list.

Note: Validate-Job can only validate the Job attributes included in a Print-Job or Create-Job operation, but not the Job document data (for interpreter errors). Therefore, Validate-Job is reduced to OPTIONAL in IPP/2.0, because it is not widely supported in existing IPP/1.1 implementations and it is not useful in an IPP/2.0 printing environment.

**Table 2 - Required and Optional Operations in IPP/2.0**

Code	Operation Name	Source	Support
0x0002	Print-Job	[RFC2911]	REQUIRED
0x0003	Print-URI	[RFC2911]	OPTIONAL
0x0004	Validate-Job (see note above)	[RFC2911]	OPTIONAL
0x0005	Create-Job	[RFC2911]	OPTIONAL
0x0006	Send-Document	[RFC2911]	OPTIONAL
0x0007	Send-URI	[RFC2911]	OPTIONAL
0x0008	Cancel-Job	[RFC2911]	REQUIRED
0x0009	Get-Job-Attributes	[RFC2911]	REQUIRED
0x000A	Get-Jobs	[RFC2911]	REQUIRED
0x000B	Get-Printer-Attributes	[RFC2911]	REQUIRED
0x000C	Hold-Job	[RFC2911]	OPTIONAL
0x000D	Release-Job	[RFC2911]	OPTIONAL
0x000E	Restart-Job	[RFC2911]	OPTIONAL
0x0010	Pause-Printer	[RFC2911]	OPTIONAL
0x0011	Resume-Printer	[RFC2911]	OPTIONAL
0x0012	Purge-Jobs	[RFC2911]	OPTIONAL

### 5.3 Required and Optional IPP Version 2.1 Operations

The following IPP Operations are included in their respective source documents. The conformance requirements (some higher than in IPP/2.0) for each IPP Operation in an IPP/2.1 implementation are defined below. Note that an IPP/2.1 implementation MAY also include support for additional IPP operations other than those specified in this list.

Note: Validate-Job is restored as REQUIRED in IPP/2.1 (as in IPP/1.1), for strict IPP/1.1 compatibility and because REQUIRED Create-Job/Print-Job in IPP/2.1 make Validate-Job trivial to implement.

**Table 3 - Required and Optional Operations in IPP/2.1**

Code	Operation Name	Source	Support
0x0002	Print-Job	[RFC2911]	REQUIRED
0x0003	Print-URI	[RFC2911]	OPTIONAL
0x0004	Validate-Job (see note above)	[RFC2911]	REQUIRED
0x0005	Create-Job	[RFC2911]	REQUIRED
0x0006	Send-Document	[RFC2911]	REQUIRED
0x0007	Send-URI	[RFC2911]	OPTIONAL
0x0008	Cancel-Job	[RFC2911]	REQUIRED
0x0009	Get-Job-Attributes	[RFC2911]	REQUIRED
0x000A	Get-Jobs	[RFC2911]	REQUIRED
0x000B	Get-Printer-Attributes	[RFC2911]	REQUIRED
0x000C	Hold-Job	[RFC2911]	REQUIRED
0x000D	Release-Job	[RFC2911]	REQUIRED
0x000E	Restart-Job	[RFC2911]	REQUIRED
0x0010	Pause-Printer	[RFC2911]	REQUIRED
0x0011	Resume-Printer	[RFC2911]	REQUIRED
0x0012	Purge-Jobs	[RFC2911]	REQUIRED
0x0013	Set-Printer-Attributes	[RFC3380]	REQUIRED
0x0014	Set-Job-Attributes	[RFC3380]	REQUIRED
0x0015	Get-Printer-Supported-Values	[RFC3380]	REQUIRED
0x0016	Create-Printer-Subscriptions	[RFC3995]	REQUIRED
0x0017	Create-Job-Subscriptions	[RFC3995]	OPTIONAL
0x0018	Get-Subscription-Attributes	[RFC3995]	REQUIRED
0x0019	Get-Subscriptions	[RFC3995]	REQUIRED
0x001A	Renew-Subscription	[RFC3995]	REQUIRED
0x001B	Cancel-Subscription	[RFC3995]	REQUIRED
0x001C	Get-Notifications	[RFC3995]	REQUIRED
0x0022	Enable-Printer	[RFC3998]	REQUIRED
0x0023	Disable-Printer	[RFC3998]	REQUIRED
0x0024	Pause-Printer-After-Current-Job	[RFC3998]	OPTIONAL
0x0025	Hold-New-Jobs	[RFC3998]	OPTIONAL
0x0026	Release-Held-New-Jobs	[RFC3998]	OPTIONAL
0x0027	Deactivate-Printer	[RFC3998]	OPTIONAL
0x0028	Activate-Printer	[RFC3998]	OPTIONAL
0x0029	Restart-Printer	[RFC3998]	OPTIONAL
0x002A	Shutdown-Printer	[RFC3998]	OPTIONAL
0x002B	Startup-Printer	[RFC3998]	OPTIONAL
0x002C	Reprocess-Job	[RFC3998]	OPTIONAL
0x002D	Cancel-Current-Job	[RFC3998]	OPTIONAL
0x002E	Suspend-Current-Job	[RFC3998]	OPTIONAL
0x002F	Resume-Job	[RFC3998]	OPTIONAL
0x0030	Promote-Job	[RFC3998]	OPTIONAL
0x0031	Schedule-Job-After	[RFC3998]	OPTIONAL

## 6 Required IPP Attributes

This section specifies the IPP Attributes that MUST be implemented for conformance to IPP/2.0 and IPP/2.1 and also provides a summary of the original required IPP/1.1 Attributes.

### 6.1 Required IPP Version 1.1 Attributes

The following IPP Attributes were originally specified as required in IPP/1.1 [RFC2911].

**Table 4 - Required Attributes in IPP1.1**

Attribute Name	Object	Source
attributes-charset	operation/all	[RFC2911]
attributes-natural-language	operation/all	[RFC2911]
charset-configured	Printer	[RFC2911]
charset-supported	Printer	[RFC2911]
compression	Job	[RFC2911]
compression-supported	Printer	[RFC2911]
document-format	Job	[RFC2911]
document-format-default	Printer	[RFC2911]
document-format-supported	Printer	[RFC2911]
document-name	Job	[RFC2911]
generated-natural-language-supported	Printer	[RFC2911]
ipp-attribute-fidelity	Job	[RFC2911]
ipp-versions-supported	Printer	[RFC2911]
job-id	Job	[RFC2911]
job-name	Job	[RFC2911]
job-originating-user-name	Job	[RFC2911]
job-printer-up-time	Job	[RFC2911]
job-printer-uri	Job	[RFC2911]
job-state	Job	[RFC2911]
job-state-reasons	Job	[RFC2911]
job-uri	Job	[RFC2911]
limit	operation	[RFC2911]
my-jobs	operation	[RFC2911]
natural-language-configured	Printer	[RFC2911]
operations-supported	Printer	[RFC2911]
pdl-override-supported	Printer	[RFC2911]
printer-is-accepting-jobs	Printer	[RFC2911]
printer-name	Printer	[RFC2911]
printer-state	Printer	[RFC2911]
printer-state-reasons	Printer	[RFC2911]
printer-up-time	Printer	[RFC2911]
printer-uri	operation	[RFC2911]
printer-uri-supported	Printer	[RFC2911]
queued-job-count	Printer	[RFC2911]
requested-attributes	operation	[RFC2911]
requesting-user-name	operation	[RFC2911]
time-at-completed	Job	[RFC2911]
time-at-creation	Job	[RFC2911]
time-at-processing	Job	[RFC2911]
uri-authentication-supported	Printer	[RFC2911]
uri-security-supported	Printer	[RFC2911]
which-jobs	operation	[RFC2911]

## 6.2 Required IPP Version 2.0 Attributes

The following IPP Attributes MUST be supported by an IPP/2.0 implementation, in addition to all the IPP Attributes listed in section 6.1 above. Note that an IPP/2.0 implementation MAY also include support for additional IPP Attributes other than those specified in this list.

**Table 5 - Required Attributes in IPP/2.0**

Attribute Name	Object	Source
color-supported	Printer	[RFC2911]
copies	Job	[RFC2911]
copies-default	Printer	[RFC2911]
copies-supported	Printer	[RFC2911]
finishings	Job	[RFC2911]
finishings-default	Printer	[RFC2911]
finishings-supported	Printer	[RFC2911]
media (note 1)	Job	[RFC2911]
media-default (note 1)	Printer	[RFC2911]
media-supported (note 1)	Printer	[RFC2911]
orientation-requested	Job	[RFC2911]
orientation-requested-default	Printer	[RFC2911]
orientation-requested-supported	Printer	[RFC2911]
output-bin	Job	[PWG5100.2]
pages-per-minute	Printer	[RFC2911]
pages-per-minute-color (note 2)	Printer	[RFC2911]
print-quality	Job	[RFC2911]
print-quality-default	Printer	[RFC2911]
print-quality-supported	Printer	[RFC2911]
printer-info	Printer	[RFC2911]
printer-location	Printer	[RFC2911]
printer-make-and-model	Printer	[RFC2911]
printer-more-info	Printer	[RFC2911]
printer-resolution	Job	[RFC2911]
printer-resolution-default	Printer	[RFC2911]
printer-resolution-supported	Printer	[RFC2911]
sides	Job	[RFC2911]
sides-default	Printer	[RFC2911]
sides-supported	Printer	[RFC2911]

### Notes:

1. Values of the media attribute that contain media size names and media type names MUST conform to [PWG5101.1] for IPP/2.0 and higher implementations.
2. The pages-per-minute-color attribute is only required for IPP/2.0 and higher implementations if the printer supports more than 1 color (i.e., the value of color-supported is 'true').
3. The media-ready attribute is NOT required for IPP/2.0 implementations, because it cannot be supported by remote IPP spoolers.

### 6.3 Required IPP Version 2.1 Attributes

The following IPP Attributes MUST be supported by an IPP/2.1 implementation, in addition to all the IPP Attributes listed in sections 6.1 and 6.2 above. Note that an IPP/2.1 implementation MAY also include support for additional IPP Attributes other than those specified in this list.

**Table 6 - Required Attributes in IPP/2.1**

Attribute Name	Object	Source
compression-supplied	Job	[PWG5100.7]
ippget-event-life	Printer	[RFC3996]
job-hold-until	Job	[RFC2911]
job-hold-until-default	Printer	[RFC2911]
job-hold-until-supported	Printer	[RFC2911]
job-priority	Job	[RFC2911]
job-priority-default	Printer	[RFC2911]
job-priority-supported	Printer	[RFC2911]
job-settable-attributes-supported	Printer	[RFC3380]
job-sheets	Job	[RFC2911]
job-sheets-default	Printer	[RFC2911]
job-sheets-supported	Printer	[RFC2911]
last-document	operation	[RFC2911]
media-col (note 1)	Job	[RFC3382] & [PWG5100.3]
media-col-default (note 1)	Printer	[RFC3382] & [PWG5100.3]
media-col-supported (note 1)	Printer	[RFC3382] & [PWG5100.3]
media-col.media-color (note 2)	Job	[PWG5100.3]
media-col.media-key (note 2)	Job	[PWG5100.3]
media-col.media-size (note 2)	Job	[PWG5100.3]
media-col.media-type (note 2)	Job	[PWG5100.3]
multiple-operation-time-out	Printer	[RFC2911]
notify-charset	Subscription	[RFC3995]
notify-events	Subscription	[RFC3995]
notify-events-default	Printer	[RFC3995]
notify-events-supported	Printer	[RFC3995]
notify-get-interval	response	[RFC3996]
notify-job-id	Subscription	[RFC3995]
notify-lease-duration	Subscription	[RFC3995]
notify-lease-duration-default	Printer	[RFC3995]
notify-lease-duration-supported	Printer	[RFC3995]
notify-lease-expiration-time	Subscription	[RFC3995]
notify-max-events-supported	Printer	[RFC3995]
notify-natural-language	Subscription	[RFC3995]
notify-printer-up-time	Subscription	[RFC3995]
notify-printer-uri	Subscription	[RFC3995]
notify-pull-method	Subscription	[RFC3995]
notify-pull-method-supported	Printer	[RFC3995]
notify-sequence-number	Subscription	[RFC3995]
notify-sequence-numbers	operation	[RFC3996]
notify-subscribed-event	Subscription	[RFC3995]
notify-subscriber-user-name	Subscription	[RFC3995]

Attribute Name	Object	Source
notify-subscription-id	Subscription	[RFC3995]
notify-subscription-ids	operation	[RFC3996]
notify-text	Subscription	[RFC3995]
notify-time-interval	Subscription	[RFC3995]
notify-user-data	Subscription	[RFC3995]
notify-wait	operation	[RFC3996]
output-device-assigned	Job	[RFC3998]
printer-alert	Printer	[PWG5100.9]
printer-alert-description	Printer	[PWG5100.9]
printer-settable-attributes-supported	Printer	[RFC3380]
printer-state-change-time	Printer	[RFC3995]
printer-state-reasons	Printer	[RFC2911] & [PWG5100.9]

## Notes:

1. The media-col collection attribute is REQUIRED in IPP/2.1 implementations and is normatively defined in [PWG5100.3] and only briefly described in an \*example\* in [RFC3382].
2. These media-col member attributes are REQUIRED in IPP/2.1 implementations – all other media-col member attributes not listed in the table above are OPTIONAL in IPP/2.1. Values of media-col.media-color, media-col.media-size, and media-col.media-type attributes MUST conform to [PWG5101.1] for IPP/2.1 implementations.
3. The media-col-ready attribute is NOT required for IPP/2.1 implementations, because it cannot be supported by remote IPP spoolers.

## 7 Conformance Requirements

### 7.1 IPP Printer Conformance Requirements

To claim conformance to this specification, an IPP Printer implementation MUST:

- (a) support all REQUIRED IPP Operations defined in section 5 of this specification;
- (b) support all REQUIRED IPP Attributes defined in section 6 of this specification;
- (c) conform to the requirements for an IPP Object specified in section 5.2 of [RFC2911];
- (d) conform to the IPP Job and Printer Administrative operation requirements specified in section 11 of [RFC3998];
- (e) conform to the Internationalization Considerations defined in section 9 of this specification; and
- (f) conform to the Security Considerations defined in section 10 of this specification.

### 7.2 IPP Client Conformance Requirements

To claim conformance to this specification, an IPP Client MUST:

- (a) explicitly identify the implemented set of IPP Operations defined in section 5 of this specification;
- (b) explicitly identify the implemented set of IPP Attributes defined in section 6 of this specification;
- (c) conform to the requirements for an IPP Client specified in section 5.1 of [RFC2911];
- (d) conform to the Internationalization Considerations defined in section 9 of this specification; and
- (e) conform to the Security Considerations defined in section 10 of this specification.

### 7.3 IPP over HTTP Conformance Requirements

The IPP/1.1 specification [RFC2911] requires implementation of IPP/1.1 transport over HTTP/1.1 as defined in [RFC2616]. Historically, some IPP implementations have not implemented an HTTP/1.1 transport (i.e., have only supported HTTP/1.0) or else have not implemented complete HTTP/1.1 support.

To claim conformance to this specification, an IPP Printer or IPP Client implementation MUST:

- (a) support the complete HTTP/1.1 protocol as defined in [RFC2616];
- (b) support chunking as defined in section 3.6.1 of [RFC2616];
- (c) support the Expect header as defined in section 5.3 of [RFC2616].

### 7.4 IPP over TLS Conformance Requirements

To claim conformance to this specification, an IPP Printer or IPP Client that supports TLS/1.0 [RFC2246] or later TLS specification MUST:

- (a) support the HTTP Upgrade protocol as defined in [RFC2817]; and
- (b) support the required minimum cipher suite for interoperability defined in the claimed TLS specification.

### 7.5 IPP Unsupported Attributes Conformance Requirements

The IPP/1.1 specification [RFC2911] requires that IPP Attributes received, that are not supported or not understood, must be processed according to the defined procedures, and that an appropriate status code must be returned. Historically, some IPP implementations have not conformed to this requirement, causing communication problems and failed IPP printing operations.

To claim conformance to this specification, an IPP Printer or IPP Client implementation MUST:

- (a) correctly process unsupported attributes, values, or groups as defined in sections 3.1.7, 3.1.8, 3.2.1.2, 3.3.5.1, 3.3.7.1, 4.1.2.3, and 13.1.2.2 in [RFC2911];
- (b) correctly process unsupported collection attributes as defined in section 7 in [RFC3382].(c) correctly support reading the IPP noValue tag as a valid value for an attribute that normally would be encoded as an enum, integer, name, or keyword value tag;(d) correctly process (or ignore) collection values as defined by [RFC3382], even if the IPP implementation does not support the collection attribute itself.

## 8 IANA and PWG Considerations

This section contains the exact registration information for IANA to update the procedures defined in [RFC2911].

The following new keyword values are defined for the `ipp-versions-supported` attribute [RFC2911]:

- '2.0': Meets all the conformance requirements of IPP version 2.0, as specified in PWG 5100.10, in addition to the requirements for IPP/1.1 as specified in [RFC2911] and [RFC2910].
- '2.1': Meets all the conformance requirements of IPP version 2.1, as specified in PWG 5100.10, in addition to the requirements for IPP 2.0 as specified above.

## 9 Internationalization Considerations

IPP/1.1 [RFC2911] requires conforming IPP Printer implementations to support the UTF-8 [RFC3629] encoding of Unicode [UNICODE] [ISO10646].

To claim conformance to this specification, IPP Printer or IPP Client implementation:

- (a) MUST support UTF-8 as defined in [RFC3629]; and
- (b) SHOULD support Network Unicode as defined in [RFC5198], which requires transmission of well-formed UTF-8 strings and recommends transmission of normalized UTF-8 strings in Normalization Form C (NFC) [UAX15].

Unicode NFC is defined as the result of performing Canonical Decomposition (into base characters and combining marks) followed by Canonical Composition (into canonical composed characters wherever Unicode has assigned them).

WARNING – Performing normalization on UTF-8 strings received from IPP Clients and subsequently storing the results (e.g., in IPP Job objects) could cause false negatives in IPP Client searches and failed access (e.g., to IPP Printers with percent-encoded UTF-8 URIs now 'hidden').

## 10 Security Considerations

To claim conformance to this specification, an IPP Printer or IPP Client implementation that supports Transport Layer Security (TLS) MUST support the mandatory cipher suite required in the claimed TLS specification (summarized in the table below).

**Table 7 - TLS Cipher Suite Requirements in IPP Versions**

Version	TLS Version	TLS Requirement	Mandatory TLS Cipher Suite
IPP/1.1	1.0 [RFC2246]	should per [RFC2911]	TLS_DHE_DSS_WITH_3DES_EDE_CBC_SHA
IPP/2.0	1.1 [RFC4346]	SHOULD	TLS_RSA_WITH_3DES_EDE_CBC_SHA
IPP/2.1	1.2 [RFC5246]	SHOULD	TLS_RSA_WITH_AES_128_CBC_SHA
