

## U.S. Scholar Application: Disciplines and Specializations

This list contains the disciplines and specializations available in the application. Use this list to identify the discipline and corresponding specialization in which your proposed project most closely falls.

If your project is multi-disciplinary or interdisciplinary, or your discipline or specialization is not listed below: In the application, you must still select a discipline and specialization, and also use the Other Specializations to describe this further.

Note: This list is separate from the list of disciplines in the awards, and the application system does not automatically match the discipline you select to the discipline(s) in the award. Applications are reviewed individually and holistically to ensure they meet program and award requirements; this includes consideration of the discipline, specialization, and the "other specializations" response. This information is also used in part to inform the peer review committee assignment, in which committees are equipped to evaluate a range of fields.

**To do a keyword search** to locate the most appropriate combination: (1) Press CTRL+F (Windows) or CMD+F (Mac); (2) In the text box that appears, enter your search term; (3) The first match will be highlighted; (4) Press Enter or click the arrows to navigate between the results.
