

EARTH NETWORKS WEATHER STATION

We use our station almost daily during the winter months to ensure we are not sending students out in too cold of weather. As an administrator I rely on it to make sure students are safe from the elements.

Mackay Joint School District #182

Leigh Patterson, Mackay Joint School District 182, Mackay, ID

THE ULTIMATE IN VERSATILITY AND OPTIONS FOR WEATHER WATCHING IN ANY INDUSTRY

Connect to your weather, where and when it's happening, with our weather stations and sensors. Enjoy a customizable, professional station that offers a full, integrated sensor suite, reliable weather data, wireless setup and comes robust with custom options.

OVERVIEW

The station comes with a suite of versatile, customizable integrated sensors including:

- ▶ A rain gauge, temperature, humidity, and wind anemometer
- ▶ Access to an online portal providing a truly hyperlocal forecast, highs/lows, totals or averages
- ▶ Insightful graphs for virtually all weather variables over the past 6 months

BENEFITS

Localized weather ensures you have the accurate information you need to make informed decisions. Observations continuously refresh every 2.5 seconds to keep you up to date.

With an Earth Networks weather station installed at your facility, you automatically join the world's most extensive network of professional-grade, real-time weather sensors.

The weather station's vast array of sensors and customizable options ensure you are on top of weather variables like temperature, wind, humidity and even Wet Bulb Globe Temperature (WBGT).

A cabled connection keeps your inputs flowing without interruption. Data is automatically uploaded to your online weather center, where you can store, view, and share it.
