

Improving Geophysical Science Link to the Society during Natural Extreme Events, Especially in Developing Countries ("Networking of world seismologists")

The IUGG support will enable IASPEI and ISC developing and maintaining a worldwide registry of seismologists & geophysicists willing to serve as a point of contact in countries with and without affiliation to IUGG, with a particular focus to developing countries. This registry will be readily available for scientific & research institutions, governmental bodies, charitable and relief organizations and media following natural extreme events such as earthquakes and tsunami.

To update and maintain an up-to-date information on the network of seismologists and geophysicists in each country willing to serve as Scientific points of contact to:

- Seismologists and Geophysicists in other countries
- Governments
- Charitable, Response and Relief organizations
- Media
