

How Common is Food Insecurity?

- In 2013, 17.5 million US households, or 14.3% of all households and 21% of all children, met the US Department of Agriculture (USDA) definition of a food-insecure household, one in which “access to adequate food is limited by a lack of money or other resources.
- Households with children are nearly twice as likely to be food insecure as households without children
- In 2013, 7.5 million American families with children lacked consistent access to adequate, nutritious food
- The federal poverty threshold for an average family of 4 people in 2013 was \$23 834; 185% of this threshold amount is \$44 093, but the federal poverty level is not a definition of economic hardship, and the amount to provide basic needs for a family of 4 often far exceeds this amount. Because 30% of food-insecure households have incomes above this level, it is clear the problem is not related solely to poverty.

What about Vermont?

What is Food Insecurity?

Food insecurity is defined as the lack of access to enough food to fully meet basic needs at all times due to lack of financial resources. Adults in households determined to be food insecure are so limited in resources that they are running out of food, reducing the quality of food their family eats, feeding their children unbalanced diets, or skipping meals so that their children can eat.

Food Insecurity in Vermont

- **13%** of all **Vermont households** are food insecure
85,000 Vermonters
- **21%** of **Vermont children** live in food insecure homes
25,400 Vermont Children
- **6%** of **Vermont seniors** are living with food insecurity
7,800 Vermont Seniors

The food insecurity data here are 3-year averages, from 2010-2012, from the Current Population Survey of the United States Census.

Vermont continued

What is Food Insecurity with Hunger?

Households that are classified as *food insecure with hunger* are those food insecure homes in which adults have decreased the quality and quantity of food they consume to the point where they are likely to be hungry on a frequent basis, or in which children's intake has been reduced to the point that the children are likely to be hungry on a regular basis and adults' food intake is severely reduced.

Food Insecurity with Hunger in Vermont

- **30,000 Vermonters** living in food insecure homes struggle with hunger
5% of Vermonters
- **7,900 Vermont children** live in households experiencing food insecurity with hunger
7% of Vermont Children
- **3,800 Vermont seniors** are food insecure with hunger
3% of Vermont Seniors

The food insecurity data here are 3-year averages, from 2010-2012, from the Current Population Survey of the United States Census.

Impact on Families

- Like poverty, food insecurity is a dynamic, intensely complex issue; the current economic recovery has marginally diminished food insecurity, but levels remain near historic highs.
- Families and children do not only feel the effects of hunger just as missed or meager meals; food insecurity manifests itself in many other biopsychosocial outcomes, including health, education, and economic prosperity.
- More than 30% of families who identified as food insecure indicated that they had to choose between paying for food and paying for medicine or medical care

Impact on Children

- The inability to consistently provide food creates stress in families, contributing to depression, anxiety, and toxic stress, which make optimal parenting difficult regardless of social class
- Children 36 months old or younger who live in food-insecure households have poorer overall health and more hospitalizations than do children who live in food-secure households
- Children with food insecurity are more likely to be iron deficient, as are adolescents with food insecurity
- Food insecurity also is associated with lower bone density in preadolescent boys.
- Children in food-insecure households generally have limited access to high-quality food

Children continued

- Among children of all ages, food insecurity is linked with lower cognitive indicators, dysregulated behavior, and emotional distress.
- Children between 4 and 36 months of age who live in low-income, food-insecure households are at higher risk of developmental problems, which presage impaired school function, compared with children of the same age living in low-income, food-secure households
- Longitudinal studies have shown that food insecurity in kindergarten students predicts reduced academic achievement in math and reading over a 4-year period.
- Young children in food-insecure households are more likely to have behavior problems above and beyond those attributable to their mother's depression and anxiety.¹² Adolescents in food-insecure families are more likely to experience dysthymia and suicidal ideation

Take away message for Families and Children

- School-aged children are aware of and distressed by food insecurity in their household. They often try to help manage food resources in the family, either by supporting the efforts of their parents or by initiating their own strategies for reducing food intake (including choosing to eat less than they want)
- Adolescents describe food insecurity in terms of quantity (eating less than usual, eating more or faster when food is available), quality (having only a few low-cost foods), affective states (worry, anxiety, or sadness about the family's food, shame or fear of being labeled "poor," feelings of having no choice or of adults trying to shield them from food insecurity), and social dynamics (using social networks to get food or being socially excluded)
- As with many pediatric conditions, the health effects of food insecurity and associated malnutrition may persist beyond early life into adulthood. Overall, the effects of food insecurity on the physical, mental, and emotional health of children and families are additive to the effects of low income alone.

The Good News!

Federal Nutrition Programs Improve Health and Well-Being

- Participation in **3SquaresVT** (formerly called Food Stamps) reduces food insecurity and improves children's diet quality
- Participation in **3SquaresVT** and/or **WIC** decreases risk of poor health, anemia, and malnutrition
- **3SquaresVT** and **WIC** participation is associated with decreases in child abuse
- Participation in **3SquaresVT** and **school meals** reduces obesity in school-age girls
- Children in families receiving **3SquaresVT** benefits have higher achievement in math and reading
- Children who participate in **school meals** have improved diets and lower risk for diabetes
- Participation in **school meals** improves student behavior, social interactions, and academic performance

How WIC Helps In the Community

WIC WOMEN
INFANTS
CHILDREN
VERMONT DEPARTMENT OF HEALTH

Mission of WIC

To assure healthy pregnancies, healthy birth outcomes and healthy growth and development for women, infants and children up to age 5 who are at nutrition risk, by providing nutritious foods to supplement diets, information and education on healthy eating, and referrals to health care and critical social services.

WIC Ensures
that Children
get a Strong,
Healthy Start In
Life.

Who does WIC Serve?

8 MILLION
mothers and young
children each month
through 10,000 clinics
nationwide

773,000
pregnant
women

593,000
breastfeeding
women

2.0 MILLION
infants
(under the age of 1)

4.2 MILLION
children
(aged 1 until their
5th birthday)

Who participates in WIC in Vermont?

• Pregnant Women	1,010
• Fully Breastfeeding Women	[784]
• Total Breastfeeding Women	1,118
• Postpartum Women	593
• Infants	2476
• Children	7558
• Total	12,756
• Coverage (% eligible)	60%

eligible for WIC.**

WIC for Foster Children

WIC FOR FOSTER CHILDREN

AT WIC YOU'LL FIND

- Wholesome foods and infant formula
- Personalized nutrition support and nutrition resources
- Referrals for healthcare and community services (Parent Child Centers, Head Start, and Children's Integrated Services)
- Kids' health screenings, including growth assessments and nutrition screenings

WHO QUALIFIES?

Any child under 5 years old in Vermont state custody is eligible for WIC services.

If the foster child you are caring for is currently on WIC, contact us to transfer them to your care.

If the child was not previously on WIC, we will schedule your appointment as soon as possible.

WHAT'S INVOLVED?

Attend a WIC Appointment twice each year AND complete a WIC Nutrition Education Activity twice each year.

We'll make sure your child has access to nutritious food, and show you how to shop for it with your eWIC card. Plus, our dedicated nutrition staff will help you and your family stay healthy in every way.

CALL TO SIGN UP!

786-5811

When you schedule your first appointment, we'll let you know what to bring with you.
