Important Product Notification

RE: Discontinuation Notice for CR800 and CR850 Series Datalogger

Overview

Please be advised that Campbell Scientific will soon discontinue the CR800 series Datalogger.

Since its introduction in May 2006, the CR800 datalogger has become the heart of thousands of extremely reliable data acquisition systems. Its flexibility made it the go-to data-collection tool for countless test and measurement applications and small sensor count research projects.

Last Order Date/ End of Sales (LOD/EOS)

The CR800 Datalogger will be available for order through 31 Dec 2023. You will not be able to purchase a CR800 after this date.

Support and Maintenance

The purchase of a CR800 includes Campbell Scientific free support through 2029. Repair services for the CR800 will continue until 2034. Please note that specific repairs may not be possible due to parts obsolescence. Recalibration services for the CR800 will be available until at least 2034. OS 32 is the last major version of the Operating System. Changes to the OS from this point on will be constrained to minor revisions.

Product Migration Options

The CR350 replaced the CR800 for most applications. In addition to the basic abilities of the CR800, the CR350 also has an on-board battery charge regulator, USB-C port, updated security, and vast built-in telecommunications options. Please contact a Campbell Scientific sales engineer to select the best product for your future needs and to formulate a migration plan.

On behalf of Campbell Scientific, Inc., I would like to express our appreciation for your business and trusting Campbell Scientific with your projects.

Kevin Rhodes

Data Logger Product Manager
