Good government results when more accessible and useable data leads to better decisions. Timely, accurate, and unbiased data enables policy makers to grasp community needs, allocate resources wisely, and evaluate the success of their initiatives. Similarly, robust AI systems require good data to operate efficiently and deliver precise predictions. Well-curated, diverse, and accurately labeled data is crucial for training AI models, allowing them to recognize patterns, make informed decisions, and offer dependable insights.

1 Good Government Relies Dependent on Quality Data

2 Data Governance is Key to Unlocking the Value of AI in Government

3 Government Must Consider Equity in both Data Governance and Use of AI

Actions We Can Take:

Joint Academy-GovExec TV Series on AI

This series includes episodes on:
- AI in the Public Sector
- AI-Driven Decision Making
- AI Ready Workforce and Human Displacement
- Ethical Considerations and AI Governance
- Generative AI in Government Communications
- AI, Chatbots, Comments, and Public Rulemaking
- AI-Enabled Cybersecurity
- AI Technologies and Public Education

Preparing Governments for Future Shocks: An Action Plan to Build Cyber Resilience in a World of Uncertainty

Global reliance on open technology emphasizes the need for social connectivity and collaboration, but also makes digital interactions vulnerable to cybercriminals. Governments must work with stakeholders to identify and mitigate cyber risks, build response capacity, and enhance resilience. Additionally, officials should lead efforts towards a more resilient future while maintaining their government's unique identity and purpose.

Academy Webinar: Elections, Technology, and Trust: Understaniding the Benefits, Limitations, and Challenges

A joint webinar between the Technology Standing Panel and the Elections Working Group
