

Use your Cloud Teller to practice vocabulary, learn different cloud types, and help with NASA GLOBE cloud observations.

Clouds are an important part of our atmosphere, and scientists are studying how they affect our weather and climate. Clouds affect our overall temperature or energy balance of the Earth and play a large role in controlling the planet's long-term climate. Satellite instruments as well as your ground observation provide one more piece of the puzzle.

To build the Cloud Teller, see instructions on the back of this page.

Clear
<10% clouds

Isolated
10-25% clouds

Scattered
25-50% clouds

Broken
50-90% clouds

Overcast
>90% clouds

Cirrus
High feathery clouds that usually mean a change in weather is on the way.

Altostratus
High altitude and can produce steady rain or snow.

Nimbostratus
Low-level clouds that cover the entire sky with broad sheets, and that produce steady rain of low to moderate intensity with no thunder and lightning.

Stratocumulus
Layered, puffy or cotton-like clouds may appear at all altitudes.

Cumulus
Puffy white clouds that often appear in lines or rows.

Contrails
A trail of condensation formed due to the exhaust of jet aircraft.

Altostratus
A middle-level cloud that consists of individual elements or droplets of cloud.

Cumulus
A fluffy, white cloud that often appears in lines or rows.

Scattered
A trail of condensation formed due to the exhaust of jet aircraft.

Cloud Teller

How to fold your Cloud Teller:

1. Cut out the Cloud Teller Square on the solid black lines (fold on the dashed lines, cut on the solid lines).
2. Place the cloud teller face down on the table. You should see no writing or pictures.
3. Fold the Cloud Teller in half, bottom to top, and unfold. Now fold the Cloud Teller in half, right to left, and unfold it again. You should see 4 smaller, equal sized squares on the paper in front of you.
4. Fold all the corners in to the center point. You should have a smaller square with the cloud cover amounts and numbers facing you.
5. Flip the Cloud Teller over, you should see the different cloud types. Fold all the corners to the center point again. You should have a smaller square with numbers one through eight facing you.
6. Fold the Cloud Teller in half, bottom to top, and unfold. Now fold the Cloud Teller in half, right to left, and unfold it again.

How to use your Cloud Teller:

1. Place the Cloud Teller, numbers up and try to bring the four corners together in the air, pockets should be forming on the underside of your Cloud Teller.
2. Put your Thumbs in the 2 pockets closest to you and your index fingers in the pockets furthest from you.
3. Open and pinch your fingers together to move the Cloud Teller, pull your pinched fingers apart, right and left, as well.
4. The goal is to get to a cloud in the center of the Cloud Teller, Ask a partner to pick a word on the outside of the Teller when it is closed, move the Teller in rhythm to each letter while spelling the word they picked out loud. Let your partner choose a number, do the same movements while counting aloud. Let them pick a number once more, lift the number to reveal a cloud underneath.
