What can we do?
Innovative solutions for better soil data and information

Foster global collaboration

Standardize and share data across soil information systems
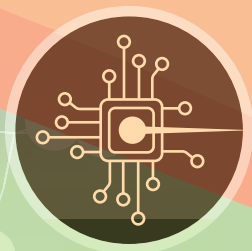

Leverage emerging technologies

Expand the use of spectroscopy, proximal sensing, and machine learning

Build capacity

Strengthen training, expertise, and institutional support for soil data

Adopt FAIR principles

Make data Findable, Accessible, Interoperable, and Reusable (FAIR).

Support national systems

Help countries develop soil information systems and decision-making tools.

GLOBAL SOIL PARTNERSHIP
