NOTES

- All 2024–2025 seasonal influenza vaccines are trivalent. IIV = egg-based inactivated influenza vaccine (injectable); where necessary to refer to cell culture-based vaccine, the prefix “cc” is used (e.g., ccIIV); RIV = recombinant hemagglutinin influenza vaccine (injectable); aIIV = adjuvanted inactivated influenza vaccine.
- An administration code should always be reported in addition to the vaccine product code. Note: Third party payers may have specific policies and guidelines that might require providing additional information on their claim forms.
- Dosing for infants and children age 6 through 35 months:
 - Afluria 0.25 mL
 - Fluarix 0.5 mL
 - Flucelvax 0.5 mL
 - FluLaval 0.5 mL
 - Fluzone 0.25 mL or 0.5 mL
- Solid organ transplant recipients age 18 through 64 years who are on immunosuppression medication regimens may receive either high-dose IIV (HD-IIV) or adjuvanted IIV (aIIV) influenza vaccine as options for influenza vaccination, without a preference over other age-appropriate IIVs or RIVs.
- Afluria is approved by the Food and Drug Administration for intramuscular administration with the PharmaJet Stratis Needle-Free Injection System for persons age 18 through 64 years.
