
An Analysis of Business Organizational Structure and Activity from Tax Data

*Tom Petska, Michael Parisi, Kelly Luttrell, Lucy Davitian, and Matt Scoffie
Internal Revenue Service*

► Introduction

Studies of businesses based on tax and information returns filed with the Internal Revenue Service (IRS) have generally focused on the financial activities or behaviors of one or more business legal or organizational types. The motives for these studies have generally been: (1) to examine and analyze data on one form of business over time, or (2) to examine the dynamics of shifting from one organizational form to another based on various factors, including incentives (or disincentives) in the Internal Revenue Code (IRC). Studies in IRS's Statistics of Income (SOI) Division have most often been the first type. This approach has contributed to the understanding of the effect of taxation on the business sector, but has not taken into consideration the dynamic and "zero sum" dimensions of business activity--that businesses conduct profit-seeking activities in a variety of legal modes, and that they examine various alternative forms of organizational structure to optimize growth and after-tax profits. The SOI Integrated Business Database (IBD) is being developed to provide evidence that businesses do, in fact, pursue optimal organizational structures. This initiative is an extension of earlier work in SOI, expanded to include Tax Years 1980-2002, incorporating the latest years for which complete SOI data are available.¹⁻⁸

This paper is divided into four sections. The first section briefly provides background information on the tax treatment of business income. The second section briefly summarizes major tax law changes that affected the taxation of business income in the period 1980-2002. The third section presents and analyzes data from annual SOI cross-sectional business studies, and the final section notes some conclusions and plans for future research.

► Taxation of Business Income

The tax treatment of the many organizational forms is complicated and varies considerably; so, only brief summaries of Federal taxation of business income are provided. The major legal forms of economic organiza-

tion are: corporations, partnerships, and nonfarm sole proprietorships.

Corporations--Corporations, in this analysis, are subdivided into those taxed at corporate rates (taxable or C corporations), and those electing to be taxed through their shareholders at individual income tax rates. The latter group includes Subchapter S corporations (or simply S corporations), Regulated Investment Companies (RICs), and Real Estate Investment Trusts (REITs), all of which are not taxed at the enterprise level but whose income similarly flows through to their owners, where it is subject to tax. C or taxable corporate income is generally taxed directly at the business level, then again at the shareholder level, at the applicable rates on dividend income. However, certain provisions in the Federal tax code lessen this effect. First, the corporate income potentially taxable at the shareholder level excludes the taxes paid by the corporation; so, income distributed to corporate shareholders is only taxable on the after-tax profits earned by the corporation. Second, the after-tax income of the corporation is not taxable at the shareholder level until it is paid out in dividends or until the shareholder realizes capital gains by selling shares that appreciated in value.

Subchapter S corporations are usually small, closely held corporations that are not taxed directly. With some exceptions, their incomes are subject to tax only at the owner level, much like the flowthrough treatment of partnerships. Owners of S corporations report their pro rata shares of income or loss on their own tax returns. Although S corporations have attractive features, they do face restrictions, including limitations on the number and type of shareholders and on the classes of stock permitted, and prohibition of foreign or corporate ownership. Similar to S corporations, the profits of RICs and REITs are not taxed at the enterprise level but flow through to their owners, where they are subject to tax.

Partnerships--Like an S corporation, a partnership serves as a conduit between a business and its owners,

in this case, its partners. The partnership entity is thus not taxed directly. Each partnership files an annual information return, which includes an income statement, balance sheet (in most cases), and a schedule of allocations or distributions made to each partner. Partners are predominately, though not exclusively, individuals who report their allocated shares of income and expenses on their own tax returns. Partnerships may be general partnerships, limited partnerships, or limited liability companies (LLCs). General partnerships, and general partners as well, face personal liability limited only by their personal resources and the applicable bankruptcy laws. Limited partners are more like corporate shareholders, with liability limited to the amount invested and with no active participation in management of the business.

A relative newcomer among for-profit businesses is the limited liability company, or LLC. These entities have the limited liability of corporations, but are taxed in the partnership model--income and expenses flow through the LLC to the owners, who are taxed on their pro rata shares. Unlike S corporations, however, LLCs do not have the extensive restrictions on the number and composition of owners. LLCs report their financial activities on their applicable business tax forms, most commonly the partnership information return (Form 1065), and indicate that they are filing as an LLC. The SOI partnership program began identifying these entities for Tax Year 1993. To provide some perspective on their prevalence and the scope of their financial activities, summary data on partnership LLCs are included in the next section.

Sole proprietorships--The profits of nonfarm sole proprietorships are taxed only at the personal (i.e., owner) level. The income statement of sole proprietorships, which summarizes the income and expenses of the business, is completed on Schedule C (or C-EZ) of the owner's individual income tax return. The net income or loss from the business is added to personal income from all other sources and taxed at the applicable individual income tax rates. In effect, the proprietorship also acts as a conduit through which the income of the business is passed through to the business owner where it is subject to tax.

Summary--While it is generally presumed that all corporate income is subject to double taxation, at both the entity and shareholder levels, the profits of S corporations, RICs, and REITs are all untaxed at the entity level and flow through to the owners or shareholders, similar to the treatment for partnerships. As a result, in the third section of the paper, we examine profits for each organizational type and subsequently aggregate data from all entities with flowthrough characteristics (including proprietorships) and compare them to C corporations that are taxed directly and whose incomes are potentially subject to double taxation.

► Tax Law Changes

The Tax Reform Act of 1986 (TRA86), the most comprehensive revision of the Internal Revenue Code since 1954, had a major impact on business decisions in the period after 1986 through broadening of the tax base of both individuals and corporations, tightening the corporation "alternative minimum tax," limiting losses from passive activities, and repealing the long-term capital gain exclusion. The most marked effect has been on the changes made to the individual and corporate marginal tax rates. In pre-TRA86, the highest individual rate (50 percent) exceeded the highest corporation rate (46 percent) by 4 percentage points. TRA86 reversed this trend, starting in 1987 and continuing with the phase-in of lowered rates in 1988-1990 of 34 percent for corporations and 28 percent for individuals. However, for 1991 and 1992, this difference between the corporate and individual marginal rates was cut in half when the top rate for the latter was increased to 31 percent.

Beginning for Tax Year 1993, the top individual rate increased to 39.6 percent, surpassing the rate of 35 percent for the highest corporation incomes, and restoring the pre-TRA relationship where the highest individual rate exceeded the top corporate rate. In fact, the difference of 4.6 percentage points between the individual rate and the corporation rate is similar to the pre-TRA86 difference of 4 percentage points, providing a reversal of the post-TRA incentive to switch to business types taxed solely at the individual level. However, this incentive declined with the lowering of top individual rates beginning for 2001.

The Small Business Job Protection Act of 1996 (SBJPA) made several noteworthy changes that affected S corporation filings. First, the Act increased the maximum number of shareholders from 35 to 75. Second, it enabled financial institutions that did not use the reserve method of accounting for bad debts to make an S election. Third, small business trusts electing to be S corporations were permitted to be shareholders in an S corporation. Finally, restrictions on the percentage of another corporation's stock that an S corporation might hold were eliminated, enabling S corporations to make an election to treat the assets, liabilities, income, deductions, and credits of wholly owned subsidiaries as those of the parent S corporation.

Even though the SBJPA eased restrictions on S corporations, the number of S corporation entities has not grown as rapidly as partnership limited liability companies (LLCs). The IRS ruled in late 1988 (Revenue Ruling 88-76, 1988-2 C.B.360) that any Wyoming LLC would be treated as a partnership, and the door was opened for other States to consider LLC legislation. By 1993, 36 States allowed LLCs as a legal entity, and that number grew to 46 States plus the District of Columbia a year later. By 1997, all 50 States and the District of Columbia had enacted LLC legislation. The "check-the-box" regulations, implemented by IRS in January 1997, relaxed the requirements for LLCs to obtain a favorable partnership tax classification, leading to a wider acceptance of LLCs.

► **Analysis of Business Data**

The SOI Integrated Business Dataset (IBD) has been compiled at the table level from the annual SOI cross-sectional studies of corporations (C and S corporations), partnerships, and nonfarm sole proprietorships for 1980-2002.⁹ Data from these annual statistical studies are generally publicly available and are published in a variety of SOI reports. (See the References section.) They represent weighted estimates of U.S. totals by year for each legal form or organizational type. The database combines data from these types of organizations for a 22-year period to enable examination of changes in business composition. The IBD is composed of 3 subsets; (1) selected financial data on businesses for all industries for 1980-2002 (Table 1); (2) selected financial data by

size of business receipts for 1998-2002 (Tables 2A-2E); and selected financial data on businesses for 21 North American Industrial Classification System (NAICS) sectors for 1998-2002 (Tables 3A-3E). Although some of the data in the IBD have already been published, this is the first time that they have been compiled for this duration, and work on analysis of significant trends and findings is just beginning.¹⁰

This section is divided into three parts. First, summary data by organizational type for 1980-2002 are presented and analyzed. In the next two subsections, trends in the data between 1998 and 2002 by receipt size and industrial sector are examined. The period for the industry data has been restricted since, beginning with 1998, all SOI business studies adopted the new NAICS industrial classification system. Previously, SOI business studies, and most economic statistics produced by Federal agencies, used an industry coding system based on the Standard Industrial Classification (SIC) System. Although NAICS has substantially improved coverage on newer, emerging industries, there is a major discontinuity between 1997 and 1998, and, for some industries, it is difficult or even impossible to derive a consistent time series.

► **Data for All Industries, 1980-2002**

The all-industry data compiled and discussed in this section include: the number of entities, total and business receipts, net income (less deficit), net income, and deficit. Although this is limited financial detail, these data comprise a consistent time series for the 22-year period for all types of businesses. Table 1 presents these data in its most detailed format, while Figures A-G highlight some of the most significant trends.¹¹

Number of Business Entities--The number of businesses doubled between 1980 and 2002, from 13 million in 1980 to over 26 million in 2002. Overall, the growth was relatively steady, with increases in all years, including even those with declines in real GDP (1980-1982, 1990-1991, and 2000-2001). However, unlike the steady overall growth in the number of entities, the composition of businesses by organizational type varied considerably. Figure A shows the percent-

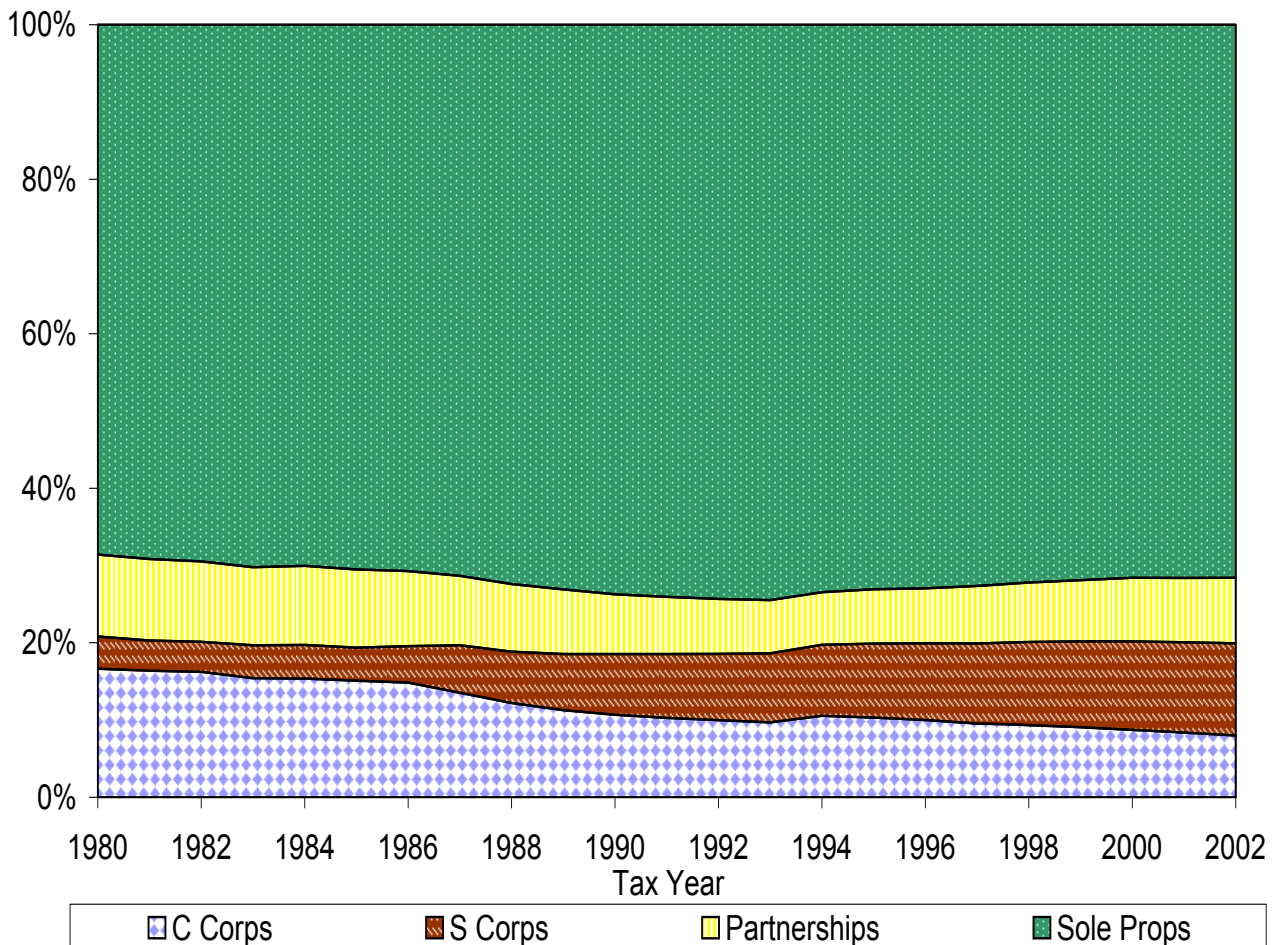

age composition in the number of business entities for C corporations, S corporations, partnerships, and sole proprietorships.

Sole proprietorships were the largest and most stable component of business entities, accounting for between 68.6 percent and 74.5 percent of overall business entities in all years and growing by 3 percentage points in the 22-year period, from 68.6 percent in 1980 to 71.6 percent in 2002. C corporations, on the other hand, accounted for 16.6 percent of business entities in 1980, but their percentage fell steadily to 8.0 percent in 2002. S corporations accounted for only 4.2 percent

of business entities in 1980, but their share increased substantially, particularly in the period following the 1986 Tax Reform, to 11.9 percent in 2002. Partnerships were also a relatively stable portion of the business entity types, declining modestly from 10.6 percent in 1980 to 8.5 percent in 2002. While the number of partnerships increased between 1980 and 1988, their proportion of the overall number of business entities declined, mainly due to the higher growth rates of S corporations and proprietorships.

Figure B presents annualized growth rates in the number of business entities with some additional detail

Figure A--Composition of the Number of Businesses, Tax Years 1980-2002

by business organizational type.¹² Overall, the number of businesses increased at a 3.2-percent annual rate for the 22-year period, but this percentage varied by business type. Although the total number of corporations showed an annual 3.0-percent increase, this was composed of a -0.1-percent annual decline for C corporations and a robust 8.0-percent annual increase by S corporations. C corporations had 2-percent annual increases in 1980-1987 and 1993-1997 but declines in both 1987-1993 and 1997-2002. S corporations increased in all periods, though the annual rate of increase declined steadily from 10.4 percent in the 1980-1987 period, to 6.4 percent for 1993-1997, and 5.0 percent for 1997-2002. Partnerships had an overall 2.2-percent growth rate for the 22-year period but declined in number between 1987-1993 before restoring growth between 4 percent to 5 percent for the later periods. Complete data for all types of partnerships are unavailable for years prior to 1993 but indicate a clear pattern between 1993 and 2002. In these years, general partnerships declined in number at an increasing rate, while limited partnerships grew at increasing rates. However, these data are dominated by the 75.1-increase for LLC's in the 1993-1997 period, which slowed

considerably but still grew at a robust 19.9 percent for 1997-2002. As noted, sole proprietorships were the most stable entity type with an overall rate of growth of 3.4 percent, which was comprised of an annual growth rate of 5.5 percent for 1980-1987 that steadily declined to 1.9 percent for 1997-2002.

Since most types of business income are essentially taxed at the individual level, a total for all business types other than C corporations was computed and is also shown in Figure B. This aggregation includes the data for 1120-RICs, 1120-REITs, S corporations, all types of partnerships, and sole proprietorships--essentially, all business organizational forms except for C corporations. Since proprietorships dominate the statistics on the number of business entities and were also a relatively stable component, it is not surprising that the growth pattern for the aggregation of businesses less C corporations mirrored that of proprietorships. These entities grew at an annual rate of 3.7 percent for the entire period, and the rate of growth steadily declined from 5.4 percent for the earliest period (1980-1987) to a low of 2.6 percent for 1997-2002. However, they avoided the reductions

Figure B--Annual Growth Rates for the Number of Businesses, Tax Years 1980-2002

Form of business	Annual Growth Rates (Percent)				
	Total interval, 1980 to 2002	Tax Years			
		1980 to 1987	1987 to 1993	1993 to 1997	1997 to 2002
	(1)	(2)	(3)	(4)	(5)
All business types.....	3.2	4.9	2.5	2.6	2.2

Limited.....	(1)	(1)	(1)	4.3	6.5
LLC.....	(1)	(1)	(1)	75.1	19.9
Sole proprietorships.....	3.4	5.5	3.2	2.0	1.9
Total less C corporations.....	3.7	5.4	3.2	2.7	2.6

in numbers that C corporations had in both 1987-1993 and 1997-2002.

Business Receipts--Unlike data on the numbers of business entities, the business receipts data include double counting, since intercompany sales and purchases are included. However, they are still an important metric of business activity by organizational type. Data on the composition and growth of business receipts by type of entity are presented in Figures C and D, respectively. C corporations dominated business receipts for the 22-year period, although their share has declined throughout the period from a high of 87.5 percent for 1981 to 64.9 percent for 2002.

So, where did this share of C corporation business receipts go? First, S corporations increased their share of receipts from about 3 percent for the 1980-1982 period to 18.5 percent for 2002. Although the rate of growth

was steady for most years, between 1986 and 1987, the S corporation share jumped from 5.5 percent to 10.1 percent in this one year, with enactment of the 1986 Tax Reform Act, which lowered the top marginal rate on business income taxed at the individual rate in comparison to the top marginal tax rate on corporate profits. Although the share of business receipts accruing to proprietorships declined from 6.4 percent to 5.0 percent in the period, the share of partnerships grew from 3 percent - 4 percent in the earliest years to 11.6 percent for 2002.

As shown in Figure D, overall business receipts grew at an annual rate of 5.3 percent over the 22-year period, peaking at 7.5 percent for 1993-1997.¹² Similarly, corporation receipts grew at a 5.0-percent annual rate for the entire period and also peaked in the 1993-1997 period at 7.1 percent. Although C corporations held the dominant share of receipts, receipts of S corporations grew at a 13.3-percent rate throughout the period, peaking at 21.9

Figure C--Composition of Business Receipts, Tax Years 1980-2002

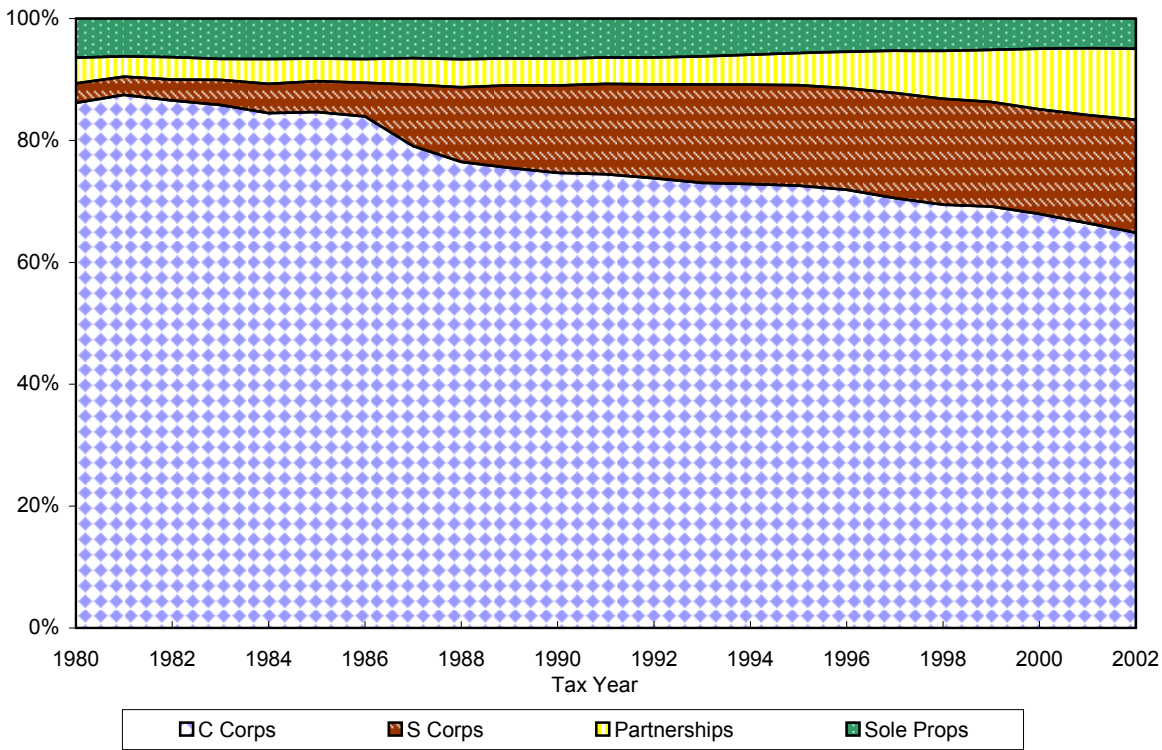

Figure D--Annual Growth Rates for Business Receipts, Tax Years 1980-2002

Form of business	Annual Growth Rates (Percent)				
	Total interval, 1980 to 2002	Tax Years

Total less C corporations	9.6	11.4	8.5	9.7	8.1

¹ Data not available for all years.

percent between 1980-1987 before steadily declining. Partnerships had an overall 9.9-percent rate of growth in business receipts for the 22-year period, which was led by increases of 17.8 percent and 15.0 percent during the 1993-1997 and 1997-2002 periods, respectively. As for the entity data, the growth in partnership data was led by the increases for LLC's, which had 90.7-percent and 26.7-percent annual growth rates for the periods 1993-1997 and 1997-2002, respectively. Proprietorships exhibited the most stable growth, with an overall rate of 4.2 percent, which started at 5.7 percent in the 1980-1987 period and declined steadily to 3.4 percent in the latest years. Unlike for the number of entities, proprietorships do not dominate the receipts data; so, the pattern for the total excluding C corporations was much more like those for S corporations and partnerships, with 9.6-percent growth throughout, ranging from 11.4 percent in the earliest period and staying above 8 percent for all later periods.

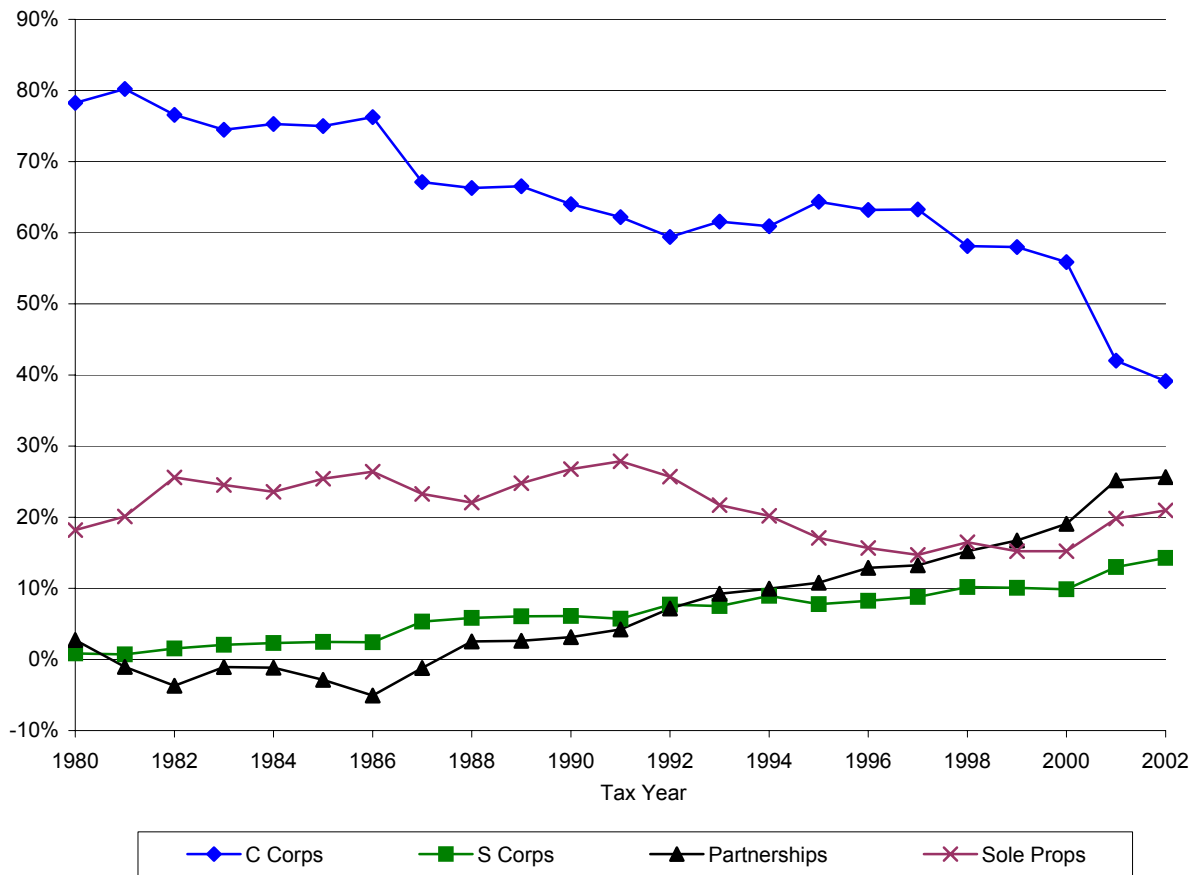

Net Income (Less Deficit)--Figures E and F show data on the composition and growth of net income (less deficit), respectively.¹³ Overall, as for business receipts, data for net income (less deficit) show the dominance of C corporations, although their share of the total declined precipitously, plummeting from 80 percent for 1980-

1981 to 39.1 percent for 2002. This is a very significant turn of events since revenue from the corporation income tax has been a significant component of overall tax collections.¹⁴ This phenomenon is even more noteworthy considering the relative stability of corporate statutory tax rates in the post-TRA period.

Once again, profits of proprietorships were the most stable of any entity type, increasing from 18.2 percent for 1980 to 20.9 percent for 2002; however, the proprietorship share had increased to 25.6 percent for 1982 and stayed above 20 percent through 1994 before bottoming out in 1997. The flowthrough entities, S corporations and partnerships, together accounted for less than 2 percent of net income (less deficit) for 1981-1986, partly because partnerships had losses in all of these years. However, beginning with 1987, their combined net income (less deficit) grew rapidly from about 4 percent for 1987 to nearly 40 percent for 2002, a tenfold increase in just 15 years.

Concerning the growth rates for net income (less deficit), overall business had profits increasing at increasing rates in all of the pre-1997 periods before falling at a 3.7-percent annual rate in the 1997-2002 period, largely due to corporate profit declines in the 2001-2002 eco-

Figure E--Composition of Business Net Income (Less Deficit), Tax Years 1980-2002

conomic downturn.¹² C corporation profits had a similar, though more prominent trend, with steady increases peaking at 12.5 percent for the 1993-1997 period before falling at an annual 17.1-percent rate for 1997-2002. The flowthrough entities, S corporations and partnerships, both had substantial growth in profitability, with overall 19.5-percent and 15.9-percent annual rates of growth throughout the 22-year period, respectively. S corporation profits increased at over 32 percent for the 1980-1987 period and stayed in the double-digit range, until dropping to a modest 3.6-percent rate of increase for 1997-2002. Partnership had overall losses from 1981 through 1987, became profitable in 1988, and then had increases of over a 20-percent level for 1993-1997, before dropping to 9.5 percent for 1997-2002.

Once again, proprietorships were the most stable component experiencing overall growth in profits of

6.3 percent for the entire period, with growth of 9.3 percent for 1980-1987 that steadily declined to 3.4 percent for the 1997-2002 period. For entities excluding C corporations, profitability growth patterns mirrored a combination of the rapid profit growth in the earlier periods of the flowthrough entities with the greater stability of proprietorships. Overall, profit growth was 11.5 percent for the entire 22-year period, with double-digit growth through 1997 before declining to 3.3 percent for 1997-2002.¹⁵

Deficits--Information on business losses or deficits is shown in Figures G and H for all entity types. C corporation losses ranged from about 48 percent to just under 63 percent for the entire period, substantially lower than the percentages for receipts and profits. The only years that C corporation losses exceeded 60 percent of the total were for the last 3 years, 2000-2002, a period

¹ Data not available for all years.

that included three quarters of decline in real GDP. Other recessionary periods seemed to have had less effect on the C corporation share of losses. S corporation losses grew starting after 1980, peaking in 1995 at 14.6 percent, before beginning a steady decline to around 9 percent for 2001 and 2002.

Interestingly, partnerships have had a substantial share of deficits throughout the 22-year period, growing from the mid-30 percents in the pre-TRA period, peaking at 47 percent for 1987 and 1988, before beginning a gradual decline to the low 20-percent range in the 2000-2002 period. Clearly, the TRA passive loss limitations had an effect. Proprietorships once again held a stable but small share of losses, which peaked for 1980, and gradually declined throughout the period to about 5 percent for the 2000-2002 period.

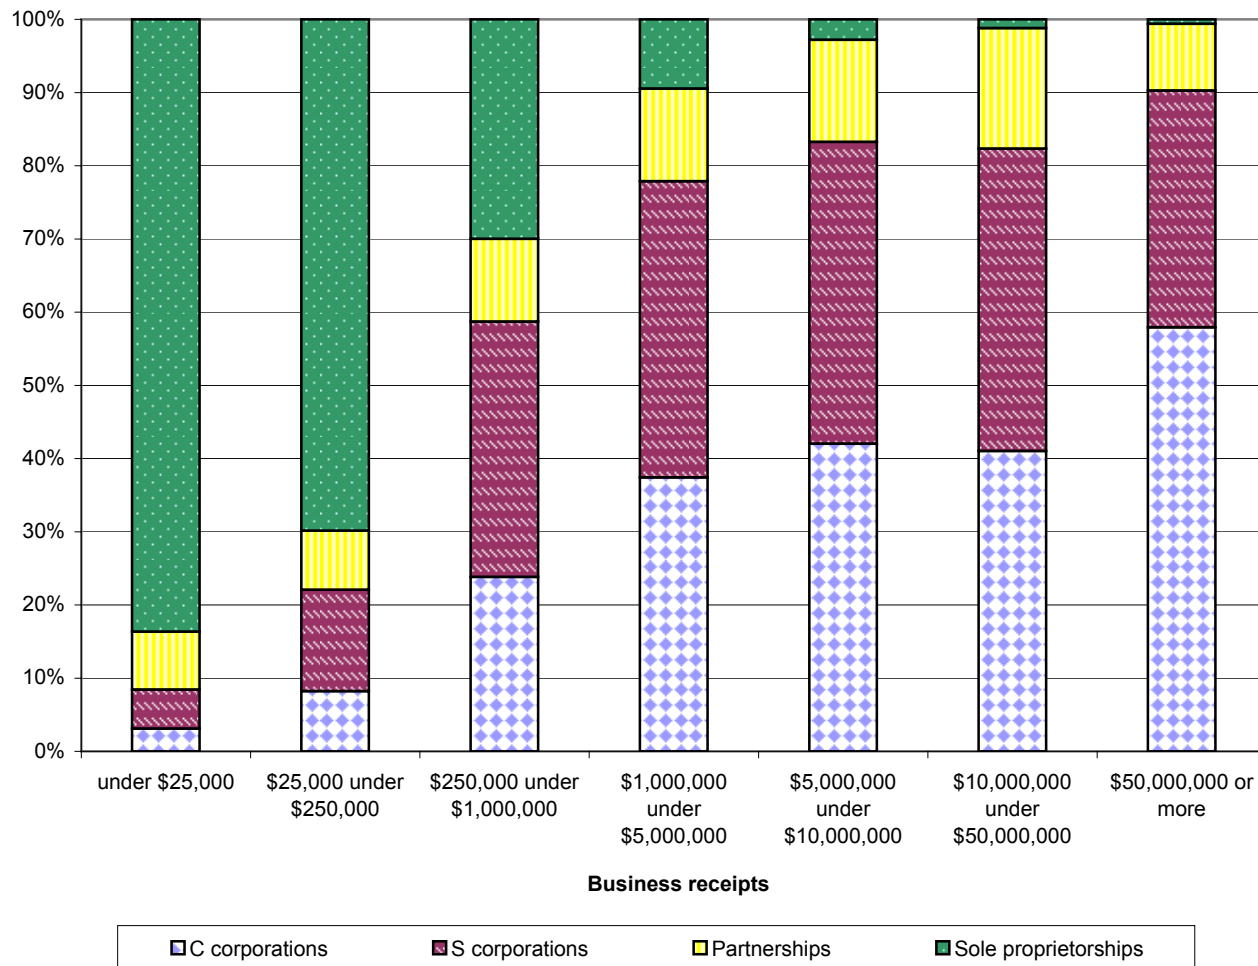

From a growth perspective, overall losses, which increased at nearly 9 percent in the 1980-1987 period, declined to around 5 percent from 1987-1997, then jumped to over 15 percent in the 1997-2002 period.¹² C corporations had a similar pattern, though growth in deficits was larger in periods of large deficit growth and smaller in periods when deficits grew at slower rates, im-

plying more stability for the other types of entities. For businesses other than C corporations, losses averaged 7.3 percent over the entire period, ranging between 5 percent and 7 percent during 1980-1997 before increasing to 11.1 percent for the 1997-2002 period. S corporations had an 18.9-percent increase for 1980-1987, but the growth in losses dropped for 1987-1993 and again for 1997-1997 before increasing to nearly a 10-percent rate for 1997-2002. For partnerships, losses increased in all periods, with the exception of the 1987-1993 period, where the post-TRA passive loss limitations disallowed an increasing share of partnership losses to offset other (positive) income.

► **Data by Size of Business Receipts, 1998-2002**

In this section, we focus on business activity during the period of 1998 through 2002 by size of business receipts. As noted, selected financial data by size of business receipts for 1998-2002 are included in Tables 2A-2E.¹¹ When the data are segmented by size of business receipts, some notable characteristics of business composition are apparent. Composition percentages on the number of businesses by size of business receipts

Figure I--Composition of Number of Businesses by Size of Business Receipts, Tax Year 2002

are shown for Tax Year 2002 in Figure I, while business receipts and net income (less deficit) by size of business receipts are shown in Figure J.

Overall, the numbers of business entities are dominated by small proprietorships, particularly those with receipts under \$1 million. C corporations, on the other hand, comprise less than 25 percent of business entities for each size-class under \$1 million, but their share grows from 37 percent to nearly 58 percent with increasingly larger receipt size-classes. The flowthrough entities, S corporations and partnerships, show their largest composition shares in the middle receipt size-classes. S corporations account for between 35 percent-41 percent

of entities for all classes between \$250,000 and \$50 million, and partnerships also have their largest composition percentages in these mid-sized receipt classes.

From Figure J, and as previously discussed, C corporations dominate activity in business receipts, accounting for nearly 65 percent of receipts for 2002. However, their share of receipts is strongly associated with size of receipts. The smallest C corporations account for only 2 percent of receipts, but this share grows rapidly to nearly 81 percent for businesses with \$50 million or more in business receipts. As with data on the numbers of entities, the flowthrough businesses show their largest composition shares in the middle size-classes, with their

Net income (less deficit):								
All businesses.....	1,055.4	-46.2	142.9	97.0	73.2	36.9	117.2	646.9
C corporations.....	413.0	-19.1	-8.4	-11.2	-10.4	-0.2	21.9	440.6
S corporations.....	150.6	-8.4	9.4	24.1	33.3	16.3	37.6	38.4
Partnerships.....	270.7	-34.9	13.6	25.1	35.7	19.5	50.8	161.0
Sole proprietorships.....	221.1	16.4	128.3	59.0	14.6	1.3	1.0	0.5

largest composition percentages in receipt size-classes between \$250,000 and \$50 million. Proprietorships, as would be expected, comprise the majority of small organizations, accounting for 92 percent of businesses with receipts under \$25,000 but with a rapidly diminishing share with increases in receipt size. For the largest size receipt size-class (\$50 million or more), proprietorships comprise only 0.2 percent of the total.

The composition of net income (less deficit) or profits among receipt sizes also shows some interesting and well-defined patterns. First, for the under \$25,000 receipt size-class, there was an overall \$46-billion loss for all types of businesses, and only proprietorships had positive net income. Although C corporations accounted for 39 percent of business profits for 2002, they show losses in all receipt size-classes below \$10 million. However, C corporations become profitable for size-classes over \$10 million, and those with receipts above \$50 million earned over \$440 billion in profits, nearly 42 percent of the total. S corporations once again show their largest composition shares in the middle receipt size-classes, with composition shares ranging from nearly 25

percent to almost 46 percent for businesses with receipts between \$250,000 and \$50 million. Partnerships had nearly \$35 billion in losses for the smallest size-class, but were profitable for all larger receipt size-classes. For receipt sizes above \$25,000, partnerships had profits of at least \$13 billion and accounted for 22 percent to 55 percent of total profits. Proprietorships, which include nearly 21 percent of overall profits, are the only business type with profitability in the under \$25,000 receipt size-class. Above \$25,000, proprietorships show a rapidly decreasing share of profits, with nearly 90 percent in the \$25,000-\$250,000 receipt size-class but only \$0.5 billion and 0.1 percent for the largest class.

► Data by Industrial Sector, 1998-2002

In this section, we focus on specific sectors that showed significant activity during the period 1998 through 2002. During this timeframe, a number of national and international events impacted economic activity, including the end of the uninterrupted GDP growth of the 1990's; the technology boom and bust; the September 11, 2001, attacks; real estate volatility;

accounting scandals; and enactment of the Small Business Job Protection Act of 1996. All of these potentially impacted business activity in specific sectors. As noted, selected financial data for 21 NAICS sectors for 1998-2002 are included in Tables 3A-3E and summary data for eight key sectors are presented in Figures K, L, and M and discussed below.

Utilities--As shown in Tables 3A-3E, the number of business entities in the Utilities sector decreased by 2.1 percent from 17,662 for 1998 to 17,283 for 2002. The most notable aspect of the decline was the 19.3-percent decrease in S corporation returns, from 2,124 to 1,715. The number of C corporations and partnerships classified as Utilities increased slightly, with only the large decline in S corporations and a slight decline in proprietorship Utilities, reducing the total for all businesses. The large decline in S corporation Utilities was mostly attributable to the smallest business receipt class, those returns with less than \$25,000 in business receipts.

The Utilities sector experienced a large decline in net income (less deficit) over the period, most of which was attributable to the largest receipt size-class for C corporations. C corporations reporting \$50 million or more in business receipts saw their net income (less deficit) decline from \$30.7 billion for 1998 to a loss of \$95.4 million for 2002. S corporations and partnership net income (less deficit) increased slightly both overall and in the largest receipt size-class.

Construction--The Construction industry accounted for roughly 12 percent of the total number of business entities. The number of businesses in this sector increased 4.8 percent over the 5-year period, from 2.9 million to 3.1 million. However, over the 1998-2002 period, the number of C corporations declined from 246,404 to 229,765 (6.8 percent), while the number of S corporations increased from 305,531 to 418,770 (37.1 percent).

Between 1998 and 2002, businesses showed significant increases in all data items, with the largest increases in S corporations, partnerships, and proprietorships. Business receipts of S corporations increased by 46.0 percent, from \$391.9 billion to \$572.1 billion; those of partnerships increased by 59.5 percent from \$106.3

Figure K--Number of Entities as Percent of Total by Selected Sector, Tax Year 2002

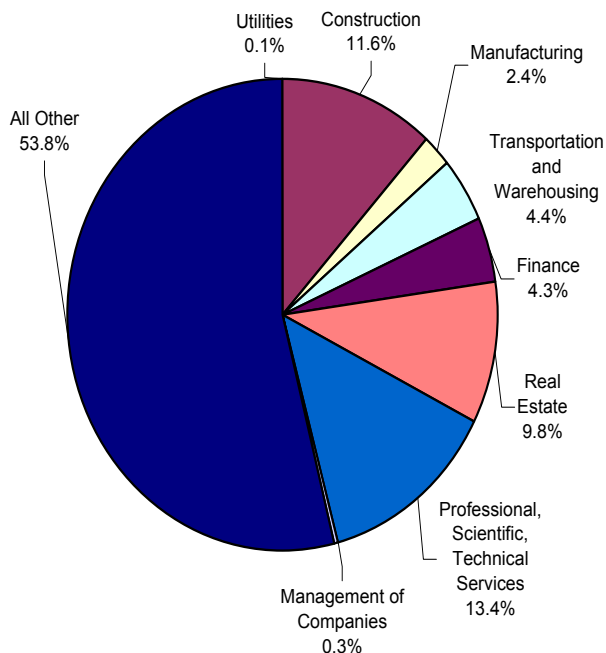

Figure L--Number of Entities as Percent of Total, by Selected Sector, Tax Year 2002

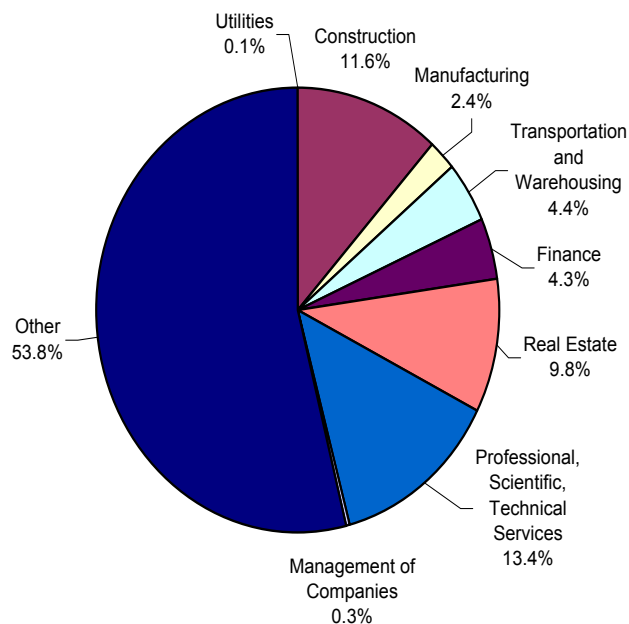

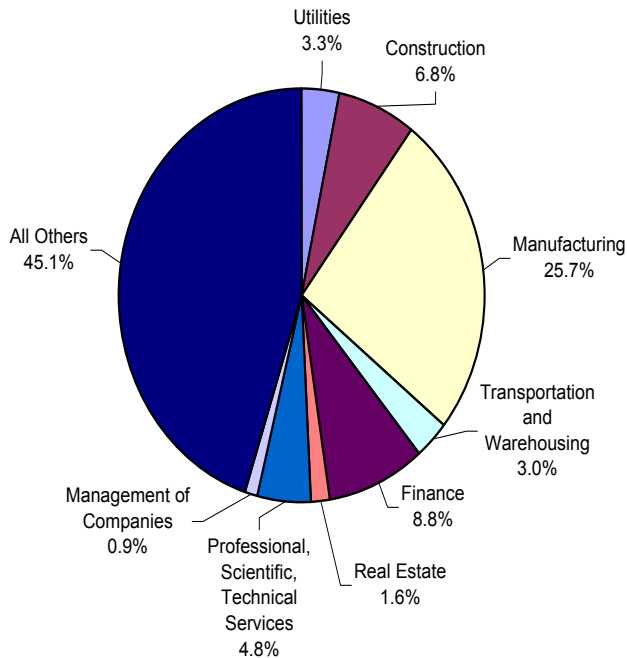

Figure M--Business Receipts as Percent of Total by Selected Sector, Tax Year 2002

billion to \$169.6 billion; and those of proprietorships increased by 17.0 percent, from \$143.9 billion to \$168.5 billion. Significant increases were also seen in salaries and wages of these entities, as well as in depreciation.

Manufacturing--For 1998, 706,002 businesses classified themselves in the Manufacturing sector. By 2002, the number had dropped to 628,868, a 10.9-percent decrease in business return filers for this sector. Of the four entity types, all declined in number with the exception of partnerships, which showed a 10.1-percent increase to 38,364. The increase in number of partnerships did little, however, to alter the distribution of partnerships among receipt size-classes. For 1998, 47.1 percent of partnerships classified in Manufacturing reported business receipts under \$100,000. For 2002, 45.2 percent of manufacturers still fell under this threshold.

C corporations and sole proprietorships accounted for most of the decline in the number of manufacturers. C corporations dropped by 27,141 (16.6 percent), and proprietorships dropped by 50,935 (14.1 percent). The

distribution of C corporation manufacturers across business receipt classes changed little from 1998 to 2002, with all classes but one (\$100,000 under \$250,000) showing decreases. Despite a decreasing number of sole proprietorships engaged in manufacturing, the period 1998–2002 saw growth in the number of large manufacturing proprietorships, with those reporting between \$5 million and \$50 million in business receipts increasing by 52.6 percent from 116 for 1998 to 177 for 2002. These changes in the manufacturing sector did little to change the composition of the sector, with each entity type making up roughly the same share of all Manufacturing for 1998 as for 2002.

Growth in business receipts for partnerships in Manufacturing exceeded that of partnerships in all sectors. Partnership business receipts in Manufacturing grew by 96 percent to \$485.0 million between 1998 and 2002. This growth could be traced to partnerships with \$50 million or more in business receipts. For 1998, 73.6 percent, or \$182.2 million, of business receipts of manufacturing partnerships were in the \$50 million or more business receipt size-class, while, for 2002, 81.4 percent, or \$394.9 million, were in this class.

Transportation and Warehousing--Growth in the overall number of business filers in this sector outpaced the growth of all sectors. The number of business entities classified in Transportation and Warehousing increased from 969,104 to 1,153,198, an increase of 19.0 percent. The number of each separate entity type increased over the period 1998–2002, but the largest percentage increases were seen in partnerships, S corporations, and proprietorships. Partnerships increased by 35.5 percent, or 6,814 returns; S corporations by 21.3 percent, or 17,290 returns; and proprietorships by 20.1 percent, or 159,181 returns. Although C corporations did show positive growth, their numbers increased by only 1 percent, from 78,342 for 1998 to 79,150 for 2002.

Well over half of all growth in Transportation and Warehousing partnerships can be traced to the smallest two receipt size-classes. The number of partnerships reporting \$100,000 or less in business receipts accounted for 59.5 percent, or 4,051, of new partnership returns in this sector. Sole proprietorships showed increases in all receipt size-classes, but growth was concentrated on the

lower end, with 99.3 percent, or 157,999, of new returns reporting less than \$250,000 in business receipts. S corporation growth was more evenly distributed among the various receipt size-classes. As with Manufacturing, the composition of the Transportation and Warehousing sector changed little. Of the 5 years studied, each entity's share of this sector remained relatively constant. Business receipts increased 13.6 percent to \$617.9 billion across all entities, while net income (less deficit) decreased 91.9 percent to \$2.5 billion over this period. Both C corporations and S corporations were responsible for the decrease in net income (less deficit).

Finance and Insurance--C corporations represent the majority of business income for the Finance and Insurance sector, while all other business entities combined represent 88.8 percent of all businesses in the sector. The number of C corporations declined over the period 1998-2002 by 12.0 percent, from 115,309 to 101,495. This decline was particularly noticeable in the smallest receipt size-classes. C corporations reporting less than \$25,000 in business receipts declined from 30,440 to 22,464. Partnerships reported the largest increase in number of businesses from 209,150 for 1998 to 263,024 for 2002, or 25.8 percent. Growth in the number of partnerships was also concentrated in smaller receipt size-classes, with the number of returns reporting less than \$25,000 in business receipts, increasing from 152,559 to 176,425.

Although net income (less deficit) for the Finance and Insurance sector declined from 1998 to 2002, partnerships were an exception. Net income (less deficit) for partnerships in this sector increased by 41.1 percent, from \$63.3 billion to \$89.3 billion. However, partnership net income (less deficit) represented only 25.2 percent of the \$354.8 billion in net income (less deficit) for all entity types for 2002.

Real Estate--The overall number of business entities in Real Estate increased 17.2 percent to 2,585,914 between 1998 and 2002. With this increase in the number of entities, there was also an increase of business receipts, which increased by 25.3 percent to \$326.4 billion. For all businesses, interest paid increased until 2002, when the overall interest paid declined by 26.0 percent from 2001 to \$19.6 billion.

The number of partnerships in Real Estate grew by 23.1 percent to 999,786 entities during the period 1998 through 2002, faster than any other entity type. Partnerships also displayed the largest amount of net income (less deficit) (\$55 billion) for the same time period, representing 68.0 percent of net income (less deficit) for all business entities. This growth could be traced to the \$5 million to under \$10 million class of business receipts, where net income (less deficit) increased from \$4.1 billion to \$8.0 billion, a 95.5-percent increase. C corporations were the only entity type in Real Estate to experience a decline in numbers. C corporation net income (less deficit) declined for the period 1998-2002, decreasing from \$4.9 billion in 1998 to almost -\$0.9 billion in 2002. Nearly all this decline was found in the C corporations reporting business receipts with \$50.0 million or more.

Professional, Scientific, and Technical Services--Overall, the number of businesses in the Professional, Scientific, and Technical Services sector showed a 12-percent increase, from 3.2 million for 1998 to 3.6 million for 2002. The increase was due to a 29.4-percent increase in S corporations, from 371,152 to 480,120, and a 9.9-percent increase for proprietorships, from 2.4 million to 2.7 million. Most of the growth for both S corporations and proprietorships could be traced to smaller receipt size-classes rather than to a single class.

For 2001, partnerships surpassed proprietorships as the leader in net income (less deficit), accounting for \$49.9 billion of the nearly \$93.2 billion reported for all business entities. Beginning for 1999, total net income (less deficit) for C corporations decreased to a \$4.5-billion loss and has remained negative for each year through 2002 when C corporations reported -\$19.7 billion. Despite this decline, C corporations continued to show the largest total receipts, business receipts, and total business deductions for this sector.

Since 1999, all entities excluding C corporations have displayed positive amounts for the total net income (less deficit), while C corporations displayed negative amounts for total net income (less deficit) during the same time period. Entities other than C corporations represented over 50 percent of all total receipts and business receipts for all business entities.

Management of Companies--The number of business entities in the Management of Companies (holding companies) sector increased 55.7 percent over the period 1998-2002, from 42,918 to 66,826 entities. However, one entity type, proprietorships, is not represented in this sector. S corporations displayed the largest percentage increase in number of businesses for this industry, 89.9 percent, an increase from 11,471 for 1998 to 21,779 for 2002. The largest increases were in smaller receipt size-classes, i.e., entities with business receipts under \$25,000 grew from 9,460 entities to 17,729 entities. This growth of S corporations can be attributed partly to the Small Business Job Protection Act of 1996, which permitted financial institutions that use the specific chargeoff method of Section 166 to account for the writeoff of bad debts to elect Subchapter S status. This provision has also led to a significant increase in the number of bank holding companies, which are also included in this sector.

Cost of goods sold for all Management of Companies more than tripled over the 5-year period of 1998-2002. C corporations nearly tripled their cost of goods sold for this period with an increase of \$7.2 billion, from nearly \$3.8 billion for 1998 to \$11.1 billion for 2002. Almost all of this growth was concentrated in C corporations with \$50 million or more in business receipts. C corporations in this class alone saw cost of goods sold rise from \$3.5 billion for 1998 to \$10.9 billion for 2002. Partnerships accounted for the largest percentage increase for cost of goods sold during this 5-year span, increasing 576.9 percent, to \$6.5 billion.

► **Conclusions and Plans for Future Research**

The most significant findings for the 22-year period are the shift in overall business activity away from C corporations to those organizations whose profits are taxed at the individual level. Overall, the data for net income (less deficit) show the dominance of C corporations, although their share of the total declined precipitously, plummeting from 80 percent for 1980-1981 to 39 percent for 2002. This is a very significant development since revenue from the corporation income tax has been a significant source of overall tax collections. This phenomenon is even more noteworthy considering the relatively stable corporation statutory tax rates, especially

in the post-TRA period. C corporations accounted for nearly 17 percent of business entities in 1980, but their percentage fell steadily to 8 percent in 2002. Although C corporations dominated business receipts, their share likewise declined throughout the period from a high of 87 percent in 1981 to 65 percent in 2002. Sole proprietorships were the largest and most stable component of business entities for this period, accounting for between 69 percent and 74 percent of overall business entities in all years. When the data are classified by size of business receipts, the largest number of entities fell into the smallest receipt size-class, but the vast majority of business receipts for most entity types generally accrued to those in the largest receipt class. C corporations dominated the receipts data in the largest class, accounting for approximately 80 percent of business receipts and nearly 72 percent of profits.

Although economic events affected different industrial sectors in very different ways, the data showed a particularly substantial trend in the 1998-2002 period. The data by industrial sector illustrated that the trend of shifting overall business activity away from C corporations to those organizations whose profits are taxed at the individual level was prevalent throughout all sectors of the economy. The most notable trend by industrial sector was the rapid growth in the number of businesses organized as flowthrough entities. In many industrial sectors, the number of C corporations grew very slightly or even declined. Across industrial sectors, almost without exception, S corporations and partnerships showed rapid growth in number of entities. S corporations showed large nominal increases, while partnerships typically grew at the fastest rates. In almost all sectors, the most notable growth in net income (less deficit) was also isolated in businesses organized as flowthrough entities.

Finally, opinions expressed in this paper are those of the authors and should not be attributed to the Internal Revenue Service or the U.S. Department of the Treasury although comments are welcome.

- ⁹ As noted, the Integrated Business Dataset is a compilation of table level data from SOI cross-sectional business studies. Future plans are to construct a true Integrated Business Database consisting of microdata from SOI C and S corporations, partnerships, and nonfarm sole proprietorships.
- ¹⁰ Data on financial activity by size of business receipts by NAICS sectors are included in an extended version of Tables 2A-2E for this paper on the SOI Tax Stats Web site at <http://www.irs.gov/taxstats/bustaxstats/article/0,,id=152029,00.html>.
- ¹¹ In Table 1, Regulated Investment Companies (RIC's) and Real Estate Investment Trusts (REIT's), which are not taxed at the enterprise level but whose income similarly flows through to their owners, are excluded from C corporations and shown separately. However, in all other tables and figures, they are included with C corporations.
- ¹² Annual growth rates were computed as follows:
- $$G_t = (\ln X_t - \ln X_{t-n}) 100 / n$$
- where G_t = the annual growth rate in the value of X between periods t and n,
- $\ln X_t$ = the natural logarithm of the value of X for period t,
- $\ln X_{t-n}$ = the natural logarithm of the value of X for period t-n, and
- n = the number of years on which the computation is based.
- ¹³ Unlike data in the SOI *Corporation Income Tax Returns* and *Source Book of Corporation Income Tax Returns*, net income (less deficit) used in this paper includes the more comprehensive "total net income" for S corporations. This item includes trade or business income plus portfolio income, as well as real estate and rental activity incomes distributed directly to shareholders.
- ¹⁴ From Table 7 in the IRS 2004 *Data Book*, for 1980, the corporation income tax accounted for nearly 14 percent of total Internal Revenue collections. For 2002, this share had declined to about 10.5 percent.
- ¹⁵ In this paper, we assume that all partnership profits and losses accrue to individuals. However, from the Partnership Schedule K, data are available on distributions by type of partner. For 2002, \$156.1 billion, or 54.2 percent, of allocated income was

distributed to nonindividual partners (which include corporate, partnership, tax-exempt, and nominees). The *SOI Bulletin* article, Partnership Returns, 2002, referenced below, has additional information.

n.a. - not available.

¹ For Tax Years beginning in 1987, Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

² Prior to Tax Year 1987, "Total net income (less deficit)" from S Corporations only includes "Net income (less deficit)" from S Corporations and is not as comprehensive as data in future years.

³ For consistency purposes of this publication, what SOI normally publishes as Partnership "Total income" is labeled as "Total receipts."

⁴ For Tax Years 1980-1995 General Partnerships include Partnerships listed on the tax return as General and not reported. For Tax Years 1996-1999 General Partnerships include Partnerships listed on the tax return as General, Other and not reported. For Tax Years 2000-2002 General Partnerships include Partnerships listed on the tax return as General, Foreign, Other and not reported.

⁵ For Tax Years 1980-1992 Limited Partnerships include Partnerships listed on the tax return as Limited Partnerships. For Tax Years 1993-1995 Limited Partnerships include Partnerships listed on the tax return as Limited Partnerships, General Limited Liability Partnerships, and Limited Liability Partnerships. For Tax Years 1996-1997 Limited Partnerships include Partnerships listed on the tax return as Limited Partnerships. For Tax Years 1998-1999 Limited Partnerships include Partnerships listed on the tax return as Limited Partnerships and Limited Liability Partnerships. For Tax Years 2000-2002 Limited Partnerships include Partnerships listed on the tax return as Domestic Limited Partnerships and Domestic Limited Liability Partnerships.

NOTE: Detail may not add to totals due to rounding.

N/A - not applicable.

¹ Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

² For this table, the computations for C Corporations also include 1120-RIC and 1120-REIT returns.

³ For Tax Year 1998 General Partnerships include partnerships listed on the tax return as General, Other and blank.

⁴ For Tax Year 1998 Limited Partnerships include Limited Partnerships and Limited Liability Partnerships.

NOTE: Detail may not add to total because of rounding.

Table 3B.--Number of Businesses, Business Receipts, Net Income, and Deficit, by Form of Business and Industry, Tax Year 1999

N/A - not applicable.

¹ Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

² For this table, the computations for C Corporations also include 1120-RIC and 1120-REIT returns.

³ For Tax Year 1999 General Partnerships include partnerships listed on the tax return as General, Other and blank.

⁴ For Tax Year 1999 Limited Partnerships include Limited Partnerships and Limited Liability Partnerships.

NOTE: Detail may not add to total because of rounding.

Table 3C.--Number of Businesses, Business Receipts, Net Income, and Deficit, by Form of Business and Industry, Tax Year 2000

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Form of business, item	All industries	Agriculture, forestry, fishing, and hunting	Mining	Utilities	Construction	Manufacturing	Wholesale and retail trade	Transportation and warehousing	Information	Finance and insurance

N/A - not applicable.

¹ Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

² For this table, the computations for C Corporations also include 1120-RIC and 1120-REIT returns.

³ For Tax Year 2000 General Partnerships include partnerships listed on the tax return as General, Foreign, Other and blank.

⁴ For Tax Year 2000 Limited Partnerships include Domestic Limited Partnerships and Domestic Limited Liability Partnerships.

NOTE: Detail may not add to total because of rounding.

N/A - not applicable.

¹ Estimate should be used with caution because of the small number of sample returns on which it is based.

² Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

³ For this table, the computations for C Corporations also include 1120-RIC and 1120-REIT returns.

⁴ For Tax Year 2001 General Partnerships include partnerships listed on the tax return as General, Foreign, Other and blank.

⁵ For Tax Year 2001 Limited Partnerships include Domestic Limited Partnerships and Domestic Limited Liability Partnerships.

NOTE: Detail may not add to total because of rounding.

Table 3E.--Number of Businesses, Business Receipts, Net Income, and Deficit, by Form of Business and Industry, Tax Year 2002

N/A - not applicable.

¹ Total Corporation "Net income (less deficit)" includes "Total net income (less deficit)" from S Corporations and is more comprehensive than what SOI generally publishes.

² For this table, the computations for C Corporations also include 1120-RIC and 1120-REIT returns.

³ For Tax Year 2002 General Partnerships include partnerships listed on the tax return as General, Foreign, Other and blank.

³ For Tax Year 2002 Limited Partnerships include Domestic Limited Partnerships and Domestic Limited Liability Partnerships.

NOTE: Detail may not add to total because of rounding.
