

# Geopaparazzi

The Snapshot Safari Project ([www.snapshotsafari.org](http://www.snapshotsafari.org)) calls on citizens to help scientists classify and count various wildlife found in the millions of photos taken by camera-trap grids (<https://cbs.umn.edu/snapshot-safari/about>) that are set up across Africa. Use the map below to discover where animals on the following page reside, and learn about the many unique habitats that make up the beautiful continent of Africa.

# Geopaparazzi

Assessing the health and diversity of animal populations on the African continent is fundamental to species survival. Become familiar with where these animals live and thrive by adding their “snapshots” to the map of Africa.
