Overview

The Pension Benefit Guaranty Corporation (PBGC) was established by the Employee Retirement Income Security Act of 1974 (ERISA) to ensure that participants in defined benefit pension plans receive their pensions if their plans terminate without sufficient assets to pay promised benefits. The PBGC administers separate insurance programs to protect participants in single-employer and multiemployer plans.

The PBGC has published the *Pension Insurance Data Book* annually since 1996 to present detailed statistics on PBGC program operations and benefit protections.

This edition of the *Pension Insurance Data Book* contains one short article describing the characteristics of plans that PBGC newly insured during 2006. The edition also contains two new tables, inserted at tables S-36 and S-37, that show the number of hard-frozen defined plans insured by PBGC and the number of participants in these plans. A “table listing key” at the end of this book will assist those familiar with the table numbers in the 2007 edition of the *Pension Insurance Data Book* in finding the relevant table(s) in this edition.

The Data Book is available on the PBGC’s Web site at www.pbgc.gov/publications/databook.

Characteristics of Plans Newly Insured by PBGC During FY 2006

Summary

Although the number of plans insured by the Pension Benefit Guaranty Corporation (PBGC) has been declining for more than 20 years, employers continue to create new defined benefit plans. Most plans newly insured by PBGC were newly created, and most newly created plans were started by employers who had not previously had a defined benefit plan. However, most participants in newly created plans were either in plans spun off from previously existing defined benefit plans or in plans that replaced plans that were terminated by their employers. The characteristics of plans PBGC newly insured during 2006 are reviewed in this study.

Overview

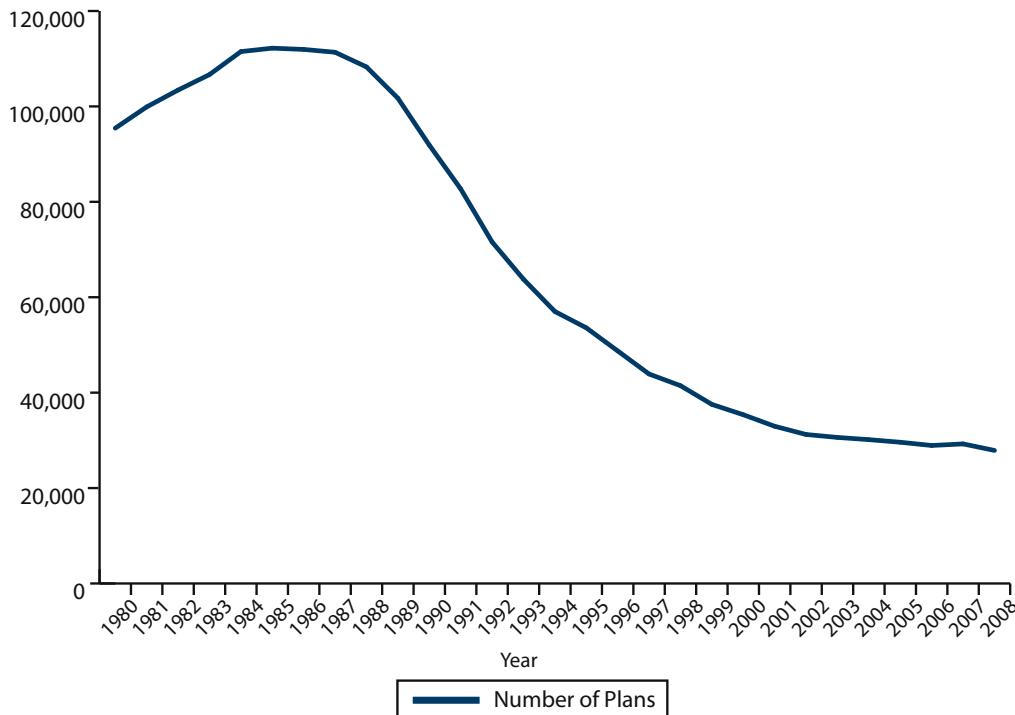

The number of single-employer defined benefit pension plans insured by the PBGC grew from about 94,000 plans between the agency's creation in 1974¹ and 1985 when it insured approximately 112,200 plans. Over the next 20 years, the number of single-employer plans insured by PBGC steadily declined. By the beginning of 2006, PBGC insured only 28,923 single-employer plans, just a quarter of the number it insured in 1985. (See Figure 1.) More than 85 percent of this decline was among small plans, plans with fewer than 100 participants.²

The recent 20-year downward trend in the number of insured plans should not be read to imply that no new plans were created between 1985 and 2006. Private sector companies created new defined benefit plans every year over this period. The trend simply signifies that more plans left the insurance system through terminations and mergers than entered it.

¹ *Pension Benefit Guaranty Corporation Annual Report to the President and Congress, June 30, 1975, page 15.*

² *The remainder of the decline was among plans with 100-4,999 participants. The number of very large plans, plans with 5,000 or more participants, actually grew by nearly 50 percent between 1985 and 2001 (from 789 plans to 1,166 plans), but the number of even these very large plans has since declined to about 1,115.*

Figure 1. Number of PBGC-Insured Single-Employer Plans, 1980-2008

During 2006, a curious thing happened. The 20-year downward trend was unexpectedly interrupted. The number of single-employer plans that PBGC insured increased slightly—to 29,255 at the beginning of 2007. More plans entered the system during 2006 than left it. However, this blip of an increase was not sustained. By the beginning of 2008, the number of insured single-employer plans had fallen by more than 1,300 to about 27,900.³

While the 2006 increase in the number of insured plans was temporary, it raised some questions about the characteristics of these newly insured plans. Was the net increase in insured plans during 2006 due to an increase in newly insured plans or a decline in the number of terminating plans? What portion of the newly insured plans was newly created? How large were the newly insured plans? What types of companies were creating new plans? This brief study looks at the characteristics of the newly insured plans.

³ The 2008 estimate of insured single-employer plans is preliminary.

Background

PBGC does not insure all defined benefit pension plans. It does not insure government plans, and it insures only about two-thirds of private sector single-employer defined benefit plans.⁴ Among the types of defined benefit plans PBGC does not insure are: plans maintained by small professional service employers (doctors, lawyers, accountants, etc.) that have never had more than 25 active participants; plans maintained by Indian tribal governments; plans maintained exclusively for substantial owners of firms; and plans maintained as excess benefit plans for certain employees.⁵ Church plans are not automatically enrolled in PBGC's insurance program, but they may elect to be covered. Church plans are the only plans that, once covered, may opt out of such coverage.

Newly created plans that do not fall into one of the categories of plans that are not covered are automatically insured by PBGC. However, not all of the plans that PBGC newly insures each year are newly created plans. Some are ongoing plans that previously did not qualify for coverage but whose status changed so that they became covered. An example would be the plan of a professional service provider that did not cover more than 25 active participants until 2006. Even though the plan may have been in operation for a number of years, because it contained fewer than 26 active participants until 2006, it was not covered by PBGC's single-employer insurance program until that year.

Some participants in newly created plans were previously covered under another plan of the same employer. The majority of participants in follow-on plans⁶ and spin-off plans⁷ were previously covered under a different employer plan.

Some plans that appear to be new creations are not really new at all. Often when one company purchases another, it also becomes responsible for the existing pension plan. The plan's employer identification number is changed to the number of the purchasing company. The plan appears to be a new plan because it has a recent effective date, but it is not a new plan. Occasionally, a company will obtain a new identification number or change the plan's plan number. The change in its plan's employer identification number or plan number makes the plan appear to be a new plan, but again it is not.

⁴ PBGC insures almost all multiemployer defined benefit pension plans, however. Multiemployer plans are insured by PBGC under a separate insurance program.

⁵ See ERISA section 4021(b) for a complete list of characteristics that prohibit a plan from being covered by PBGC's insurance coverage.

⁶ A follow-on plan results when an employer terminates an existing plan and covers some or all of its active participants under a new plan, perhaps a plan with a different plan design. In most cases where a follow-on defined benefit plan is created, the terminating plan was also a defined benefit plan.

⁷ A spin-off results when part of an existing plan is split off into a separate plan. Spin-offs often occur when a company sells a component to another company. They also occur when companies decide to eliminate their responsibility for retirees and terminated vested participants. In this latter case, the company creates a new plan (the spin-off plan) containing only retirees and terminated vested participants and then terminates that plan by either purchasing annuities for the plan's participants or by paying the participants their benefits in a lump sum. A terminated vested participant is a former employee who worked long enough under the plan to become vested (entitled to a non-forfeitable benefit) in the plan, but left the sponsoring company before he was eligible to receive a retirement benefit. He will be able to receive his benefit once he attains the plan's normal retirement age.

Results

We identified 1,662 plans that appear to have paid PBGC premiums for the first time for the 2006 plan year.⁸ During calendar 2006, PBGC records show 1,233 insured plans completed a standard termination. Another 61 underwent a distress or involuntary termination and were trustee by PBGC by the end of fiscal year 2008. The difference between the number of newly insured plans and the number of terminating plans is 368, slightly higher than the net 332-plan increase we noted earlier. Some of the difference is accounted for by follow-on plans that were created in the middle of the former plan's plan year. In such a case, both plans would have paid (partial) premiums for the year. A few additional plans no doubt disappeared either when they merged with other ongoing plans or when insurance coverage was cancelled by the administrators of church plans. The analysis that follows is based on these 1,662 plans.

Old Plans Versus New

One question this study seeks to answer is how many of the newly insured plans are newly created plans that cover workers not previously covered by a defined benefit plan. This question is not as easy to answer as one might expect. To qualify, the plan must be newly created. For purposes of this study, we define "newly created" as having an effective date of 2004 or later.⁹ Table 1 shows the distribution of the plans newly insured by PBGC during 2006 by the plan's effective date. By our definition, 1,371, or 82 percent, of the 1,662 newly insured plans were newly created and 195, or 12 percent, were older plans that may have only qualified for coverage in 2006. Ninety-six plans (6 percent) did not report the year they were created because they did not report 2006 as the first year for paying premiums. We included these 96 plans among the newly insured because we could not match them to plans that had paid premiums in an earlier year. We also treat them as newly created, bringing that total to 1,467 plans or 88 percent of all plans that were newly insured during 2006.

⁸ A larger number of plans appeared to be new, based on their use of previously unused employer identification number and plan number combinations. We eliminated plans whose sponsors previously paid premiums for the same plan under a different employer identification number or plan number. We also eliminated plans that were acquired in their entirety as part of the purchase of the former sponsoring company. It is possible that a few additional plans should have been eliminated.

⁹ When the effective date was not reported, the adoption date was used in its place, even though the adoption date is often later than the effective date. Ninety-six plans reported neither an effective date nor an adoption date. We counted plans with 2004 and 2005 effective dates as newly created because not all plans pay PBGC premiums as timely as they should.

Table 1. Year Plans Newly Insured During 2006 Were Created

Year Plan Was Created	Number of Plans	Percent
Before 2000	34	2.0%
2000	24	1.4
2001	30	1.8
2002	40	2.4
2003	67	4.0
2004	112	6.7
2005	378	22.7
2006	829	49.9
2007*	52	3.1
Unknown	96	5.8
Total	1,662	100.0%

* These plans only reported their adoption dates, which commonly lag the effective date by up to a year.

As we have seen, however, not all newly created plans cover previously uncovered employees. Many of these newly created plans were follow-on or spin-off plans. Sometimes, the plans identified themselves as such, but normally we inferred they were follow-on or spin-off plans because they reported either that they received transfer payments from other plans, or that they covered retired or terminated vested participants.¹⁰ Of the 1,467 newly created plans, 1,017 appeared to be plans that covered only participants who had not previously been covered by a defined benefit plan sponsored by their employer. The other 450 plans appeared to be plans where some or all participants had previously been covered under another defined benefit plan sponsored by their employer.

For most of the remainder of this study, we divide the 1,662 newly insured plans into three groups. The first group consisted of 195 plans created before 2004 (“Old Plans”). The second group comprised 450 newly created plans that show ties to previous employer plans (“New Plans With Ties”). The third and largest group, with 1,017 plans, includes newly created plans that have no apparent ties to a previous employer plan (“New Plans Without Ties”).

¹⁰ A new defined benefit plan can give past service credits to long-term employees who become immediately vested at the plan's creation. If these employees leave the employer shortly after the plan's creation, then our conclusion that these plans are follow-on or spin-off plans will be incorrect. We believe this type of error will be small.

Newly Insured Plans by Size

Most of the plans newly insured during 2006 were very small. Almost 60 percent had five or fewer participants. Only seven percent had as many as 100 participants. However, several were quite large, including two in the 80,000-participant range. Invariably, the largest plans were “New Plans With Ties”. The 48 largest plans were in this group and covered 92 percent of the 405,614 participants of all newly insured plans.

The size breakdown of these plans by type of plan is shown in Table 2. The 1,017 “New Plans Without Ties”, the plans most likely to cover new participants, covered just 2.2 percent of the participants in all newly insured plans. The 195 “Old Plans” tended to be small plans and covered only about 0.6 percent of the total. Only one of these “Old Plans” had more than 100 participants. The 450 “New Plans With Ties” covered 97 percent of all participants in these newly insured plans. This group of follow-on and spin-off plans included 87 percent of the plans with 100 to 999 participants and all the plans with 1,000 or more participants. The implication of these results is that relatively few additional workers were covered by newly created defined benefit plans.

Table 2. Number of Newly Insured Plans and Participants, by Plan Size and Type of Plan

Plan Size	Number of Plans				Number of Participants			
	Old Plans	New Plans With Ties	New Plans Without Ties	Total	Old Plans	New Plans With Ties	New Plans Without Ties	Total
5 or fewer	147	133	695	975	440	406	2,102	2,948
6-24	23	121	249	393	202	1,516	2,547	4,265

10,000 or more	---	6	---	6	---	272,994	---	272,994
Total	195	450	1,017	1,662	2,231	393,985	9,398	405,614

Newly Insured Plans by Industry

As shown in Table 3, two-thirds of the newly insured plans came from just three industrial sectors—services (which accounted for more than a third of all newly insured plans), construction (which accounted for 12.6 percent), and finance, insurance, and real estate (which accounted for almost 21 percent). The increase in the number of newly insured plans appears to have been driven largely by the economic recovery that followed the 2000-2002 downturn, a recovery fueled by the booming construction and real estate markets.

Table 3. Number of Newly Insured Plans by Industry and Type of Plan

Industry	Old Plans	New Plans With Ties	New Plans Without Ties	Total
Agriculture & Mining	2	9	18	29
Construction	14	42	153	209
Manufacturing	4	94	84	182
Transportation & Utilities	1	13	23	37

Retail Trade	12	21	50	83
Information	6	17	30	53
Finance, Insurance, & Real Estate	54	85	208	347
Services	89	138	351	578
Total	195	450	1,017	1,662

Defined benefit plans have several advantages over defined contribution plans that help explain why employers would establish this type of plan. Defined benefit plans allow much greater tax deferred contributions than defined contribution plans. They can provide credits for service rendered before the plan was created, which rewards employees who dedicated their working careers to the company and increases the amount of money that can be contributed to the plan and sheltered from taxation. Benefits in most defined benefit plans are also insured by PBGC. The negative sides of defined benefit plans from the company's perspective are that the sponsoring company and not the participants bear the investment risk and providing past service credits can result in underfunding and increase PBGC premiums.¹¹

¹¹ The underfunding premium, known as the variable-rate premium, was capped for small companies (companies that have 25 or fewer employees) beginning with the 2007 plan year. The cap for these plans is essentially \$5 times the square of the number of participants in the plan at the end of the previous plan year.

“New Plans Without Ties” were much more likely than existing plans to be in the construction and service industries and slightly more likely to be in the wholesale trade and finance, insurance, and real estate industries. One group in the service industry stands out because its plans were so large in relative terms. While “New Plans Without Ties” generally averaged fewer than nine participants per plan, those of law offices averaged 82 participants. The 20 newly created plans for lawyers included six of the ten “New Plans Without Ties” that had 100 or more participants. Surprisingly however, five of these 20 new plans for lawyers had fewer than 26 active participants and probably should not have been paying premiums to PBGC. These five lawyer plans had lots of company. One hundred fifty of the 351 new service sector plans without ties to a previous plan were plans of professional service employers. One hundred twenty of these professional service plans (including the five lawyer plans) had fewer than 26 active participants, indicating they may be ineligible for PBGC’s insurance coverage. It appears that as few as 30 of these 150 new professional service plans should have paid PBGC premiums.

About half the plans created prior to 2004, the “Old Plans” in Table 3, were in the service industry. One might expect an even larger proportion to be in the service industry since the primary reason such plans would suddenly begin paying premiums is that they finally met the 26-active-participant threshold needed to qualify for PBGC coverage. Contrary to such an expectation, however, only 43 of these 89 service industry plans were professional service plans, and only nine of these had 26 to 30 active participants, suggesting they recently qualified for PBGC coverage.¹² More disturbing, 21 of these 43 professional service plans had fewer than 26 total participants, suggesting they did not qualify for PBGC insurance coverage and should not have paid premiums to PBGC.¹³

The largest of the “Old Plans,” and the only “Old Plan” with more than 99 participants, was a hospital plan that had been administered by a county government until 2006 when the hospital transitioned to a private sector facility. At that point, the plan became insurable by PBGC and properly paid its premiums.

It appears that more than 90 percent of the “Old Plans” that began paying PBGC premiums in 2006 did not have characteristics that would have exempted them from paying premiums prior to 2006. We concluded that most of these other “Old Plans” probably should have begun paying PBGC premiums before 2006.

Among the “New Plans With Ties,” the distribution across industries is very similar to the distribution of all plans PBGC insures. For example, half of this group and half of

¹² Four other plans had 26-31 total participants, but we did not have their 2006 or 2007 Form 5500, so we could not determine the number of active participants in these plans.

¹³ Some may properly be paying premiums to PBGC if they ever had 26 active participants. Once the plan has 26 active participants, it is covered by PBGC’s insurance program even if the number of active participants subsequently falls below 26. However, if they ever had 26 or more active participants, they probably should have been paying premiums to PBGC before 2006.

all single-employer plans PBGC insures were in the services and manufacturing sectors. The similarity of distributions suggests that this group of plans reflects the normal business restructuring activities that are constantly taking place in a dynamic economy. Businesses, or parts of businesses, are bought and sold and companies restructure their operations to keep abreast of the latest technologies and trends in their industries. Twenty-one of the 56 professional service plans in this group had fewer than 26 active participants. Again, it appears that some of these professional service plans should not have been paying premiums to PBGC.

Newly Insured Plans by State

During 2006, there was one newly insured plan that was administered in Canada and at least one newly insured plan from every state except Alaska. The greatest numbers of newly insured plans were from California (426), New York (225), and Florida (105). There were fewer than 10 newly insured plans each in 22 states and 10-19 each in another nine. The first four columns of Table 4 show the number of newly insured plans by region and states with 20 or more newly insured plans, with breakdowns by type of plan. The fifth column shows the percent of "New Plans Without Ties" by state, the type of newly insured plans that are most likely to cover workers not previously covered by another employer defined benefit plan. The last column shows the percentage distribution by state of all plans insured by PBGC at the beginning of 2006.

Comparing the last two columns of Table 4 shows where the growth in plans covering new workers is taking place. The Southwest, Rocky Mountain, Pacific, and Southeast regions all had a larger percentage of the new plans than their share of existing plans. The other regions had a lower share. Arizona, Nevada, Oregon, and California had the largest share of new plans relative to their shares of plans at the beginning of the year. Florida was the only state in the eastern half of the United States whose share of new plans was substantially larger than its share of existing plans.

* No single state in the Midwest had at least 20 newly insured plans.

Other Characteristics of Newly Insured Plans

Information from Form 5500¹⁴ was available for 1,527 or about 92 percent of these 1,662 newly insured plans.¹⁵ The following characteristics are from that source.

Only 39 of the plans were hard frozen¹⁶—two of the “New Plans Without Ties”, four “Old Plans”, and 33 ”New Plans with Ties.” We would expect the largest number of frozen plans to be “New Plans With Ties”. Some spin-off plans cover only retirees and separated vested participants, participants who are no longer employees of the company and who are not earning new pension credits. Others plans are spun off when a sponsoring company sells a component, and the new employer does not want to maintain that component’s plan. The new employer freezes the spun-off plan, and either covers the workers under another defined benefit or defined contribution plan, or does not cover them under any retirement plan.

A fairly large 18 percent of these 1,527 plans were hybrid plans,¹⁷ a larger percentage than the 7.3 percent of all plans that PBGC insured at the beginning of 2006. Table 5 shows the percentage of hybrid plans for each of the three types of newly insured plans, by plan size. “New Plans With Ties” were the most likely to be hybrid plans (22.9 percent). However, only about 20 percent of such plans with 100 or more participants were hybrid plans. We would have expected more of these large plans to be hybrid plans because most of the hybrid plans PBGC insures are large plans and “New Plans With Ties” includes most of the large newly insured plans. Hybrid plans were a slightly lower percentage of “New Plans Without Ties” (17.5 percent), including eight of the group’s 10 plans with 100-999 participants. “Old Plans” were least likely to be hybrid plans. Only six percent were hybrids. Interestingly, nearly half of all plans with 25-99 participants were hybrid plans, regardless of the type of plan.

¹⁴ IRS Form 5500, Annual Return/Report of Employee Benefit Plan, collects detailed information on defined benefit plans, including a variety of plan characteristics.

¹⁵ We did not have Form 5500s for six percent of the “Old Plans,” seven percent of the new plans with ties to previous plans, and nine percent of the new plans without such ties.

¹⁶ In a hard freeze, all benefit accruals in a plan cease.

¹⁷ Hybrid plans incorporate elements of both defined benefit and defined contribution plans but are treated as defined benefit plans. They often express benefits in terms of an account balance. The two most common types of hybrid plans are cash balance plans and pension equity plans.

Table 5. Hybrid Newly Insured Plans, by Type and Plan Size

Plan Size	Old Plans		New Plans With Ties		New Plans Without Ties		Total		
	Hybrid	Total	Hybrid	Total	Hybrid	Total	Hybrid	Total	Percent
Less than 25	2	162	33	239	125	856	160	1,257	12.7
25-99	9	20	43	84	29	59	81	163	49.7
100-999	0	1	12	65	8	10	20	76	26.3
1,000 or more	0	0	8	31	0	0	8	31	25.8
Total	11	183	96	419	162	925	269	1,527	17.6
Percent	6.0		22.9		17.5		17.6		

Sixty-five of the 1,662 plans PBGC newly insured in 2006 terminated by early 2009. These terminations included about 10 percent of “Old Plans” (19 of 195 plans) and “New Plans With Ties” (43 of 450 plans). Only three of the “New Plans Without Ties” had terminated.

Three of the terminated “New Plans With Ties” had more than 1,000 participants and six others had more than 100 participants. It is not surprising that 10 percent of these plans terminated because, as stated earlier, it is not uncommon for a sponsor to spin off the retirees and terminated vested participants into a separate plan with the purpose of terminating the new plan, while the older plan continues to provide growing benefits for active participants.

Conclusions

The defined benefit pension universe is a dynamic place with employers creating, terminating, and modifying their plans as circumstances warrant. For a twenty-year period from 1986 to 2006, the net effect of these actions was a yearly decline in the number of single-employer plans insured by PBGC. Then, during 2006, more plans were newly insured than were terminated. The number of plans PBGC trusted during calendar 2006 was somewhat smaller than in previous years but the number of plans leaving PBGC’s insurance coverage because of a standard termination was slightly larger. We conclude that the increase in the number of insured plans was more the result of an increase in plans being newly insured than a decrease in the number of plans leaving PBGC’s insurance coverage.

We divided the newly insured plans into three groups based on the plans' characteristics. The largest group of newly insured plans was new plans that covered workers not previously covered by a defined benefit plan sponsored by their employer ("New Plans Without Ties"). Even though more than 60 percent of the newly insured plans were in this group, these plans contained only two percent of the participants in all newly insured plans. The new defined benefit plans created by employers who did not previously sponsor a defined benefit pension plan covered a very small additional percentage of the nation's labor force. About 12 percent of the plans were created prior to 2004 ("Old Plans" by our definition). PBGC does not automatically insure all newly created plans, and some plans that are not initially insured can qualify for coverage later because of a change in their circumstances. A few plans in this "Old Plan" group appeared to grow into coverage, but the majority appeared to have not paid their premiums when first due. Finally, about 25 percent of the newly insured plans were newly created plans that had ties to a previous plan ("New Plans With Ties"). Most of the participants in these plans were probably covered under the previous plan. This group of plans contained 97 percent of all the participants in the newly insured plans.

One-third of all new plans were in the service sector of the economy. Unfortunately, more than a quarter of these new service sector plans appeared to be plans of small professional service providers that may not have been eligible for PBGC's insurance coverage. Upon request, the agency will determine if a plan qualifies for coverage, but apparently few professional service companies and benefits practitioners are aware of this service. We found only 27 newly insured plans across all industries that availed themselves of this service. The determination was that only 7 qualified for PBGC insurance coverage at the time the determination was made. Twenty did not qualify.

We also found that a number of plans that had not paid PBGC premiums for some years after the plans were established were among those that were newly insured during 2006. We could find no valid reason why most of these plans delayed paying their premiums.

We were not able to determine why so many plans were newly insured during 2006. We speculate that this event was driven by the relatively strong economy, especially in the housing sector that was experiencing a surge in prices. A disproportionate share of the newly insured plans was in the construction and finance, insurance, and real estate industries. We queried a few companies to find out why they created new defined benefit plans. The three most frequent responses were to reward employees, because they could make larger tax deductible contributions to a defined benefit plan than to a defined contribution plan, and because their accountant recommended they establish a defined benefit plan. When asked which response was the most important, the vast majority said the ability to make large tax deductible contributions to their retirement plan.

We note that the increase in the number of insured single-employer plans occurred at the same time that there was a substantial increase in PBGC's single-employer flat-rate premium from \$19 per participant per year to \$30 per participant per year. After 2006, the flat-rate premium is indexed to increases in the national average wage rate as calculated by the Social Security Administration. Also during 2006, the Congress passed the Pension Protection Act of 2006 which, among other pension modifications, strengthened funding rules for underfunded single-employer plans. These events may have played a part in the subsequent decline in the number of insured plans after 2007.

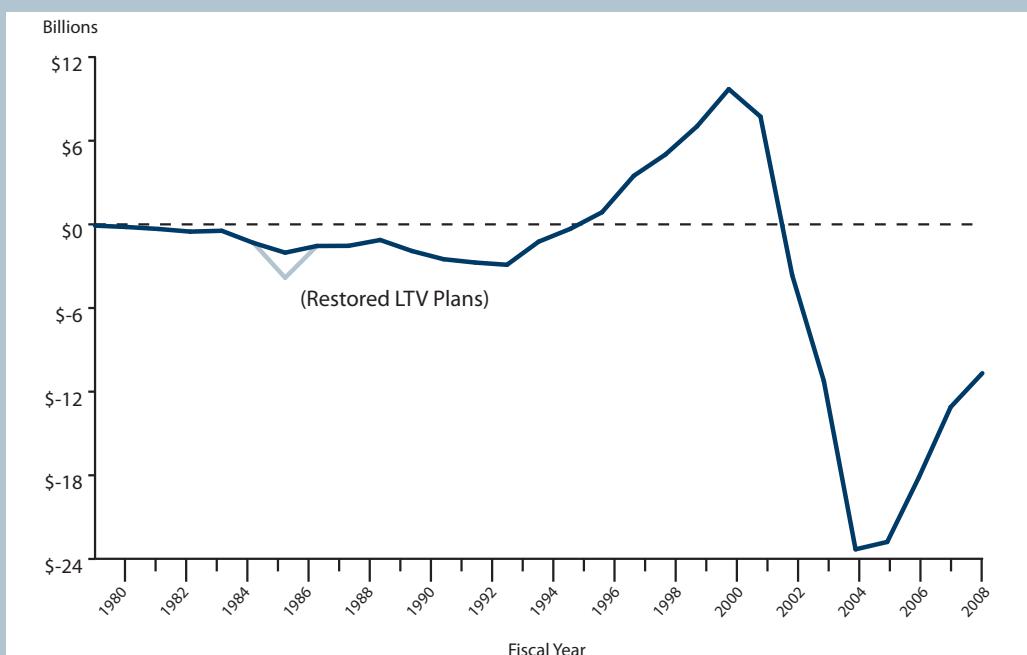

PBGC DATA AND TRENDS

Single-Employer Program

Net Position of PBGC's Single-Employer Program (1980-2008)

- PBGC's single-employer program was in deficit from its inception until 1996.
- It then had a growing surplus that reached a historic high of \$9.7 billion in 2000.
- PBGC's financial position then fell to a deficit of \$23.3 billion in 2004. As of the end of fiscal 2008, the deficit was down to \$10.7 billion.
- The rapid decline from 2000 to 2004 resulted from several very large losses (primarily from steel and airline industry plans), lower interest rates that raised the value of PBGC's liabilities, and declining stock prices.

Figure 1

Reference Table S-1 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Annual Reports (1980-2008).

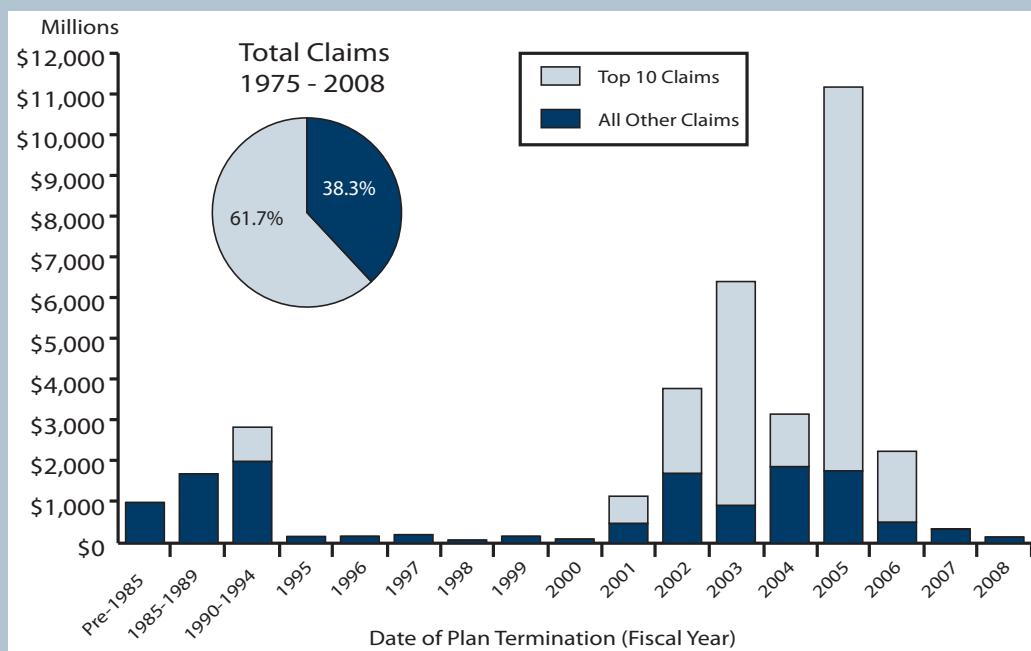

PBGC's Net Position is the difference (with some adjustments) between the insurance program's total assets and total liabilities.

The originally reported \$3.8 billion deficit in 1986 decreased after a Supreme Court ruling restored three pension plans and returned their pension obligations of \$1.8 billion to LTV Corporation.

Concentration of PBGC Claims (1975-2008) Single-Employer Program

- Since 1975, 3,850 terminations of underfunded single-employer plans have resulted in total claims of \$34.9 billion.
- Total annual claims have varied widely, ranging from a low of \$28.6 million in 1984 to a high of more than \$11.2 billion in 2005.
- The firms presenting the ten largest claims have accounted for nearly 62 percent of all claims against PBGC from 1975 to 2008.

Figure 2

Reference Table S-4 of the PBGC Pension Insurance Data Book 2008.

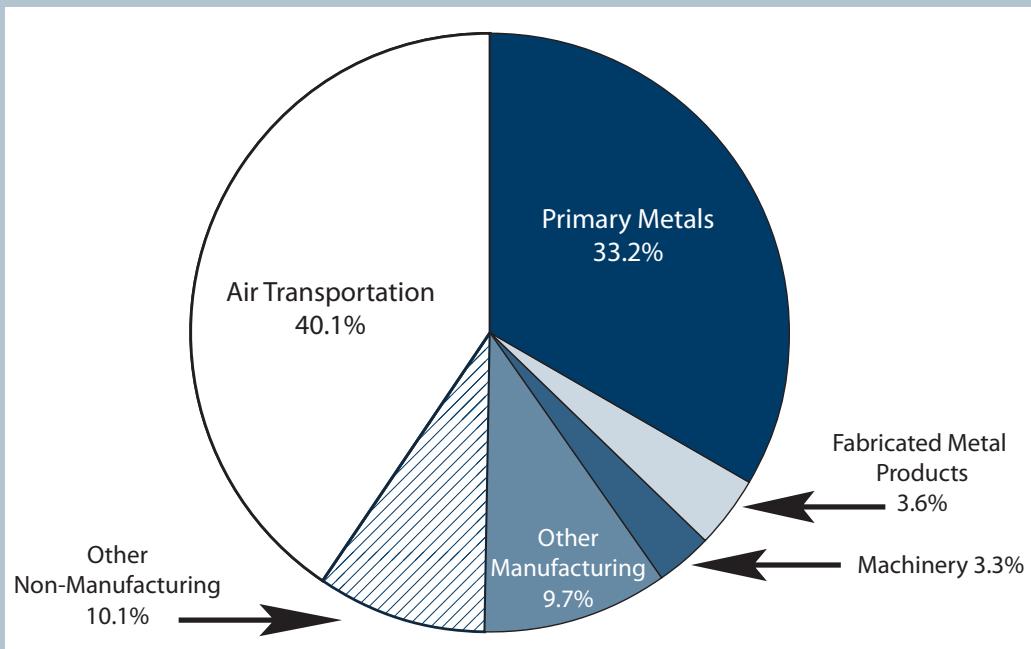

Sources: PBGC Fiscal Year Closing File (9/30/2008) and PBGC Case Management System.

Note: Claims are termination liabilities minus plan assets. They do not include recoveries.

PBGC Claims by Industry (1975-2008) Single-Employer Program

- Terminations by firms in the Primary Metals and Air Transportation industries have accounted for more than 73 percent of PBGC's claims.
- An additional seven percent of claims have come from sponsors in the Fabricated Metals and Machinery industries.

Figure 3

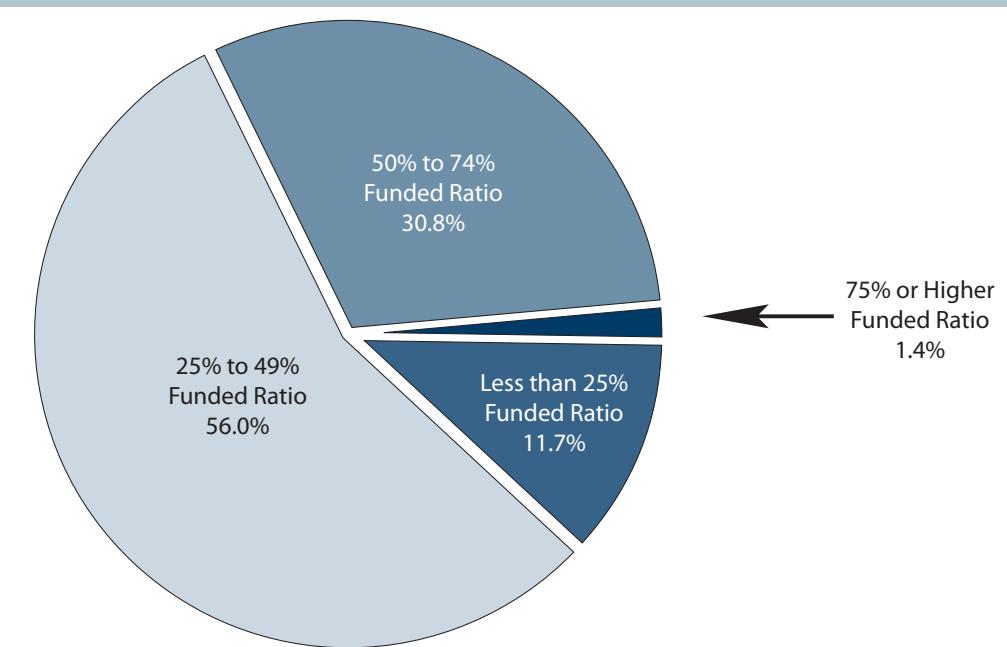

Reference Table S-19 of the PBGC Pension Insurance Data Book 2008.

Sources: PBGC Fiscal Year Closing File (9/30/2008) and PBGC Case Management System.

PBGC Claims by Funded Ratio (1975-2008) Single-Employer Program

- Funded ratios are generally very low for plans terminating with claims against PBGC.
- Two-thirds of pension claims came from plans that were less than 50 percent funded (using PBGC assumptions).
- Only \$504 million of the \$34.9 billion in total claims came from plans terminating with funded ratios of 75 percent or higher.

Figure 4

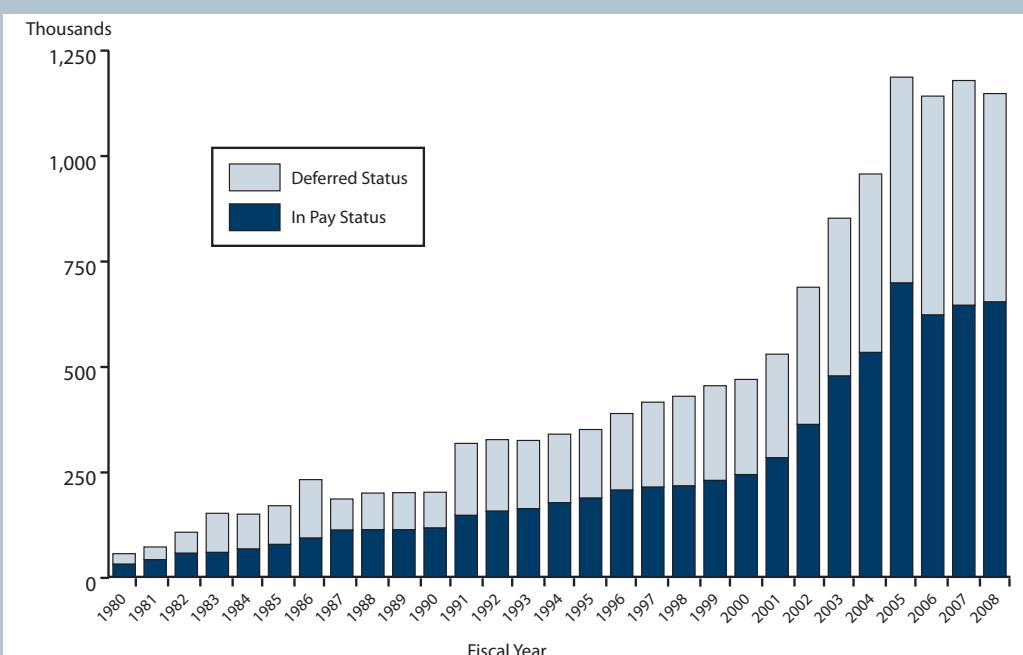

Reference Table S-11 of the PBGC Pension Insurance Data Book 2008.

Sources: PBGC Fiscal Year Closing File (9/30/2008) and PBGC Case Management System.

Participants and Beneficiaries Receiving PBGC Payments (1980-2008) Single-Employer Program

- PBGC's responsibility for paying pension benefits has increased substantially since 1980.
- In 2008, PBGC made periodic payments to almost 640,000 payees and lump-sum payments to 17,000 participants.
- An additional 495,000 individuals are eligible for future PBGC benefit payments.
- The large increase since 2001 reflects PBGC's trusteeship of several large steel and airline plans with large numbers of participants.

Figure 5

Reference Table S-20 of the PBGC Pension Insurance Data Book 2008.

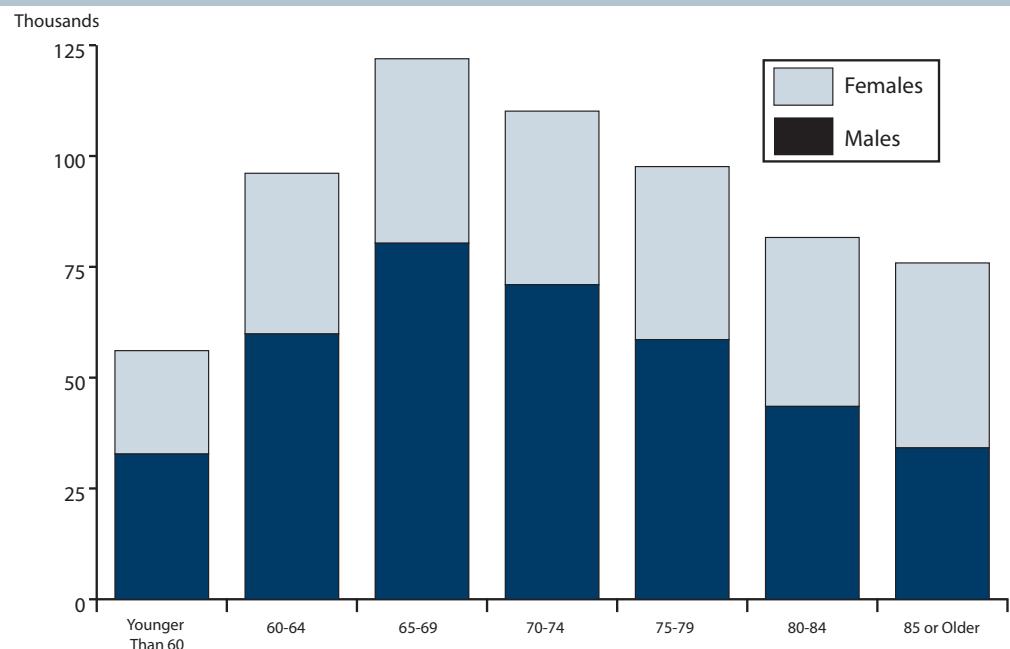

Sources: PBGC Participant System (PRISM), fiscal year calculations, PBGC Management Reports, and PBGC Benefit Payment Reports.

Note: Payees are retired participants or their beneficiaries.

Participants and Beneficiaries Receiving PBGC Payments by Gender and Age (2008) Single-Employer Program

- Payees receiving PBGC payments are distributed across all retiree age groups.
- In all age groups except the oldest, male payees outnumber female payees.

Figure 6

Reference Table S-23 of the PBGC Pension Insurance Data Book 2008.

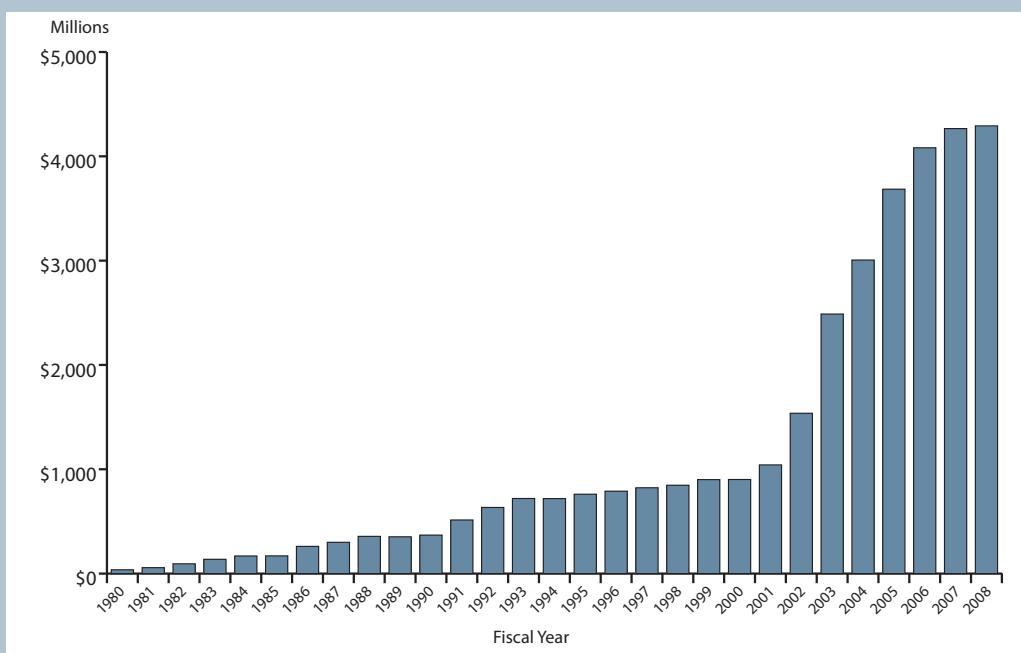

Sources: PBGC Participant System (PRISM), fiscal year calculations, PBGC Management Reports, and PBGC Benefit Payment Reports.

Note: Payees are retired participants or their beneficiaries.

PBGC Benefit Payments (1980-2008) Single-Employer Program

- PBGC's important role in the private pension system is illustrated by the continuing increase in payments over its history.
- In 2008, PBGC disbursed almost \$4.3 billion in monthly pension and lump-sum benefit payments to retired plan participants or their beneficiaries.

Figure 7

Reference Table S-20 of the PBGC Pension Insurance Data Book 2008.

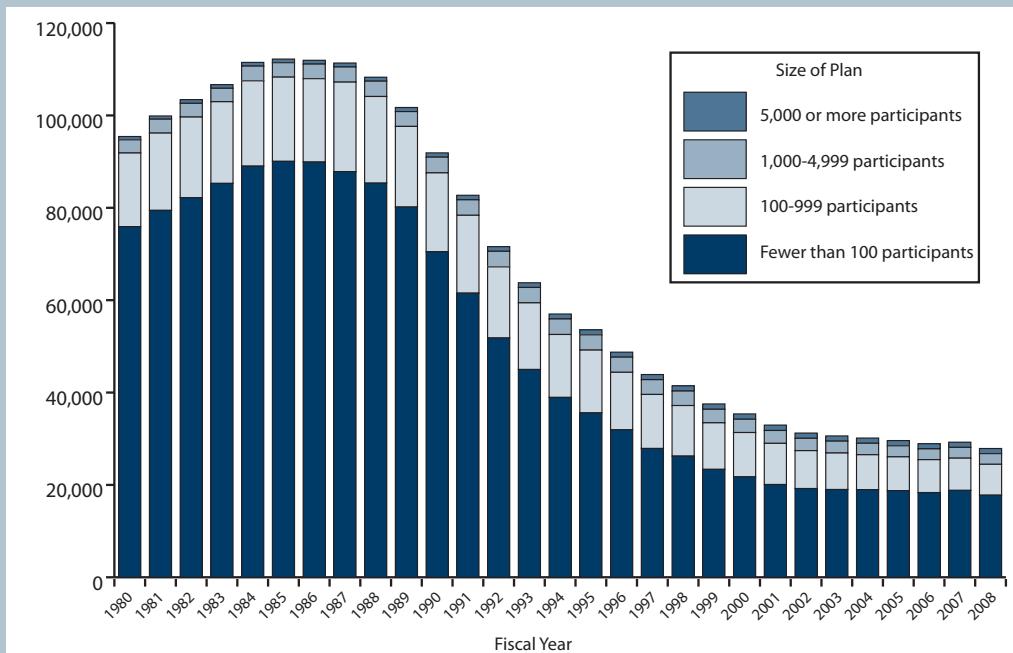

Sources: PBGC Participant System (PRISM), fiscal year calculations, PBGC Management Reports, and PBGC Benefit Payment Reports.

Note: Payment figures include periodic payments and lump-sum payments made in each year.

PBGC-Insured Plans (1980-2008) Single-Employer Program

- The total number of single-employer plans insured by PBGC has declined substantially in the past 23 years.
- In 2008, PBGC insured about 27,900 single-employer defined benefit plans, down from an all-time high of 112,000 plans in 1985.
- This decline primarily reflects a large number of terminations among small plans.

Figure 8

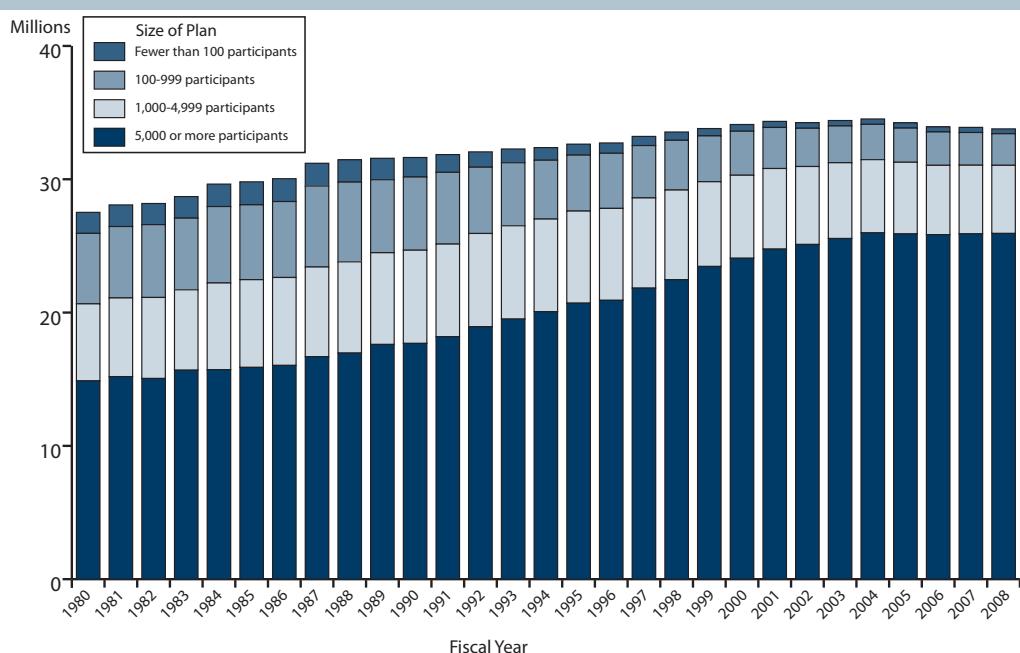

Reference Table S-31 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Premium Filings, various years.

Participants in PBGC-Insured Plans (1980-2008) Single-Employer Program

- In 2008, PBGC provided pension insurance protection to almost 34 million participants in single-employer plans.
- The total number of participants has been declining slowly since 2004.

Figure 9

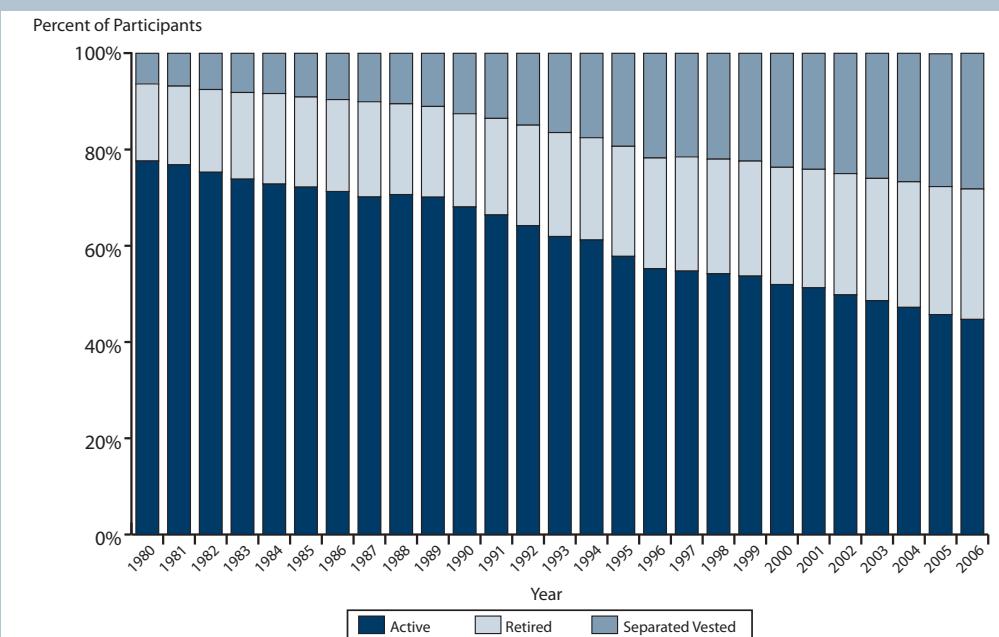

Reference Table S-30 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Premium Filings, various years.

PBGC-Insured Participants by Participant Status (1980-2006) Single-Employer Program

- Although the total number of participants that PBGC covers has grown, the percentage of these participants that are active workers fell from 78 percent in 1980 to 45 percent in 2006.
- The greatest participant growth since 1980 has occurred among separated vested participants.

Figure 10

Reference Table S-32 of the PBGC Pension Insurance Data Book 2008.

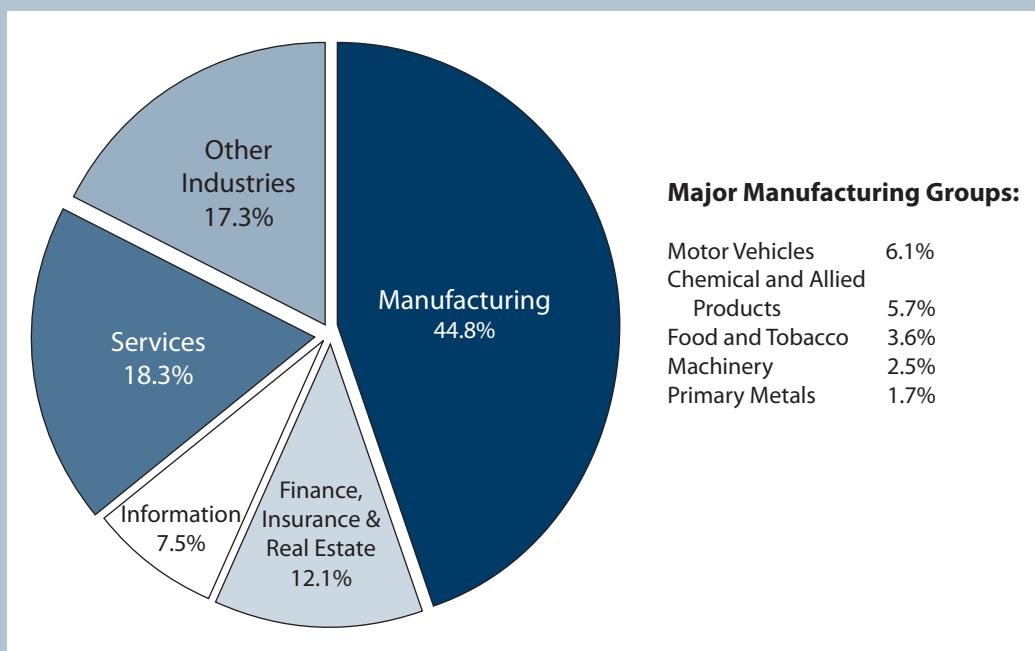

Source: Internal Revenue Service Form 5500 Series filings for single-employer plans.

Data for plan years prior to 1999 include only plans with 100 or more participants.

PBGC-Insured Participants by Industry (2007) Single-Employer Program

- While PBGC covers workers in all major industrial sectors, nearly half of all covered single-employer participants are in plans sponsored by manufacturing firms.
- Substantial numbers of participants can also be found in plans sponsored by firms in the Services sector and the Finance, Insurance, and Real Estate sector.

Figure 11

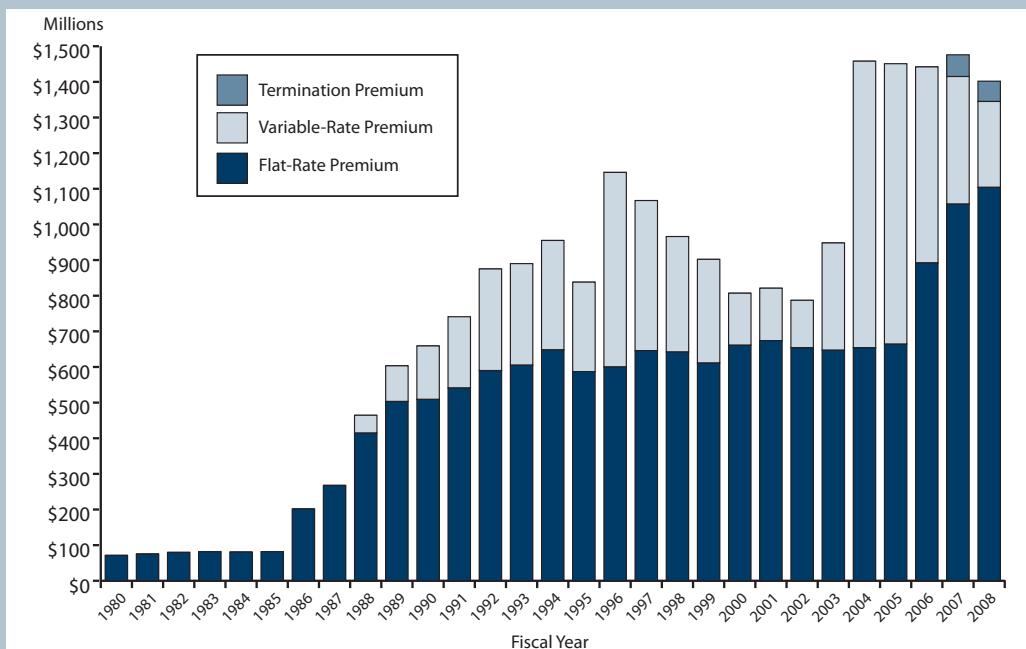

Reference Table S-38 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Premium Filings.

PBGC Premium Revenue (1980-2008) Single-Employer Program

- The increase in premium revenues beginning in 1986 reflected increases in the flat-rate premium, the addition of the variable-rate premium based on plan underfunding levels after 1987, and the phasing-out of the cap on the variable-rate premium.
- The decline in premium revenue from 1996 to 2002 reflected somewhat improved plan funding and an increase in the number of underfunded plans qualifying for exemption from paying the variable-rate premium.
- The increase in premium revenues in 2003 and 2004 reflected deteriorating plan funding, which caused an increase in variable-rate premiums.
- The increase in the flat-rate premium after 2005 reflected an increase in the rate from \$19 to \$30 per participant effective for 2006, and indexing of this amount after 2006.
- The termination premium was added in 2007.

Figure 12

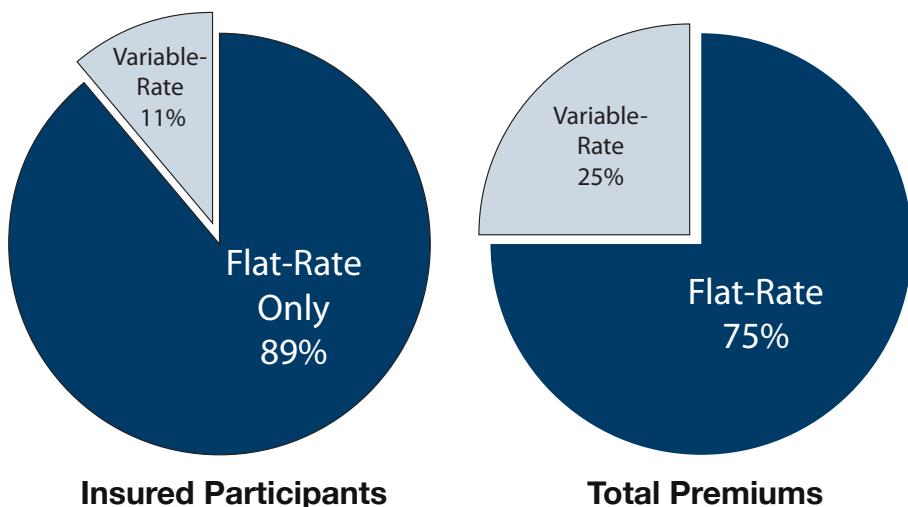

Reference Table S-40 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Annual Reports (1980-2008).

PBGC-Insured Participants and Premiums by Premiums Paid (2007) Single-Employer Program

- The PBGC variable-rate premium is based on the level of a plan's unfunded liabilities.
- Fewer than one in nine participants are in plans paying the variable-rate premium.

Figure 13

Reference Tables S-41 and S-42 of the PBGC Pension Insurance Data Book 2008.

PBGC DATA AND TRENDS

Multiemployer Program

Net Position of PBGC's Multiemployer Program (1980-2008)

- PBGC's multiemployer program was in surplus from 1982 to 2002.
- The program reported a deficit of \$473 million in 2008.

Figure 14

Reference Table M-1 of the PBGC Pension Insurance Data Book 2008.

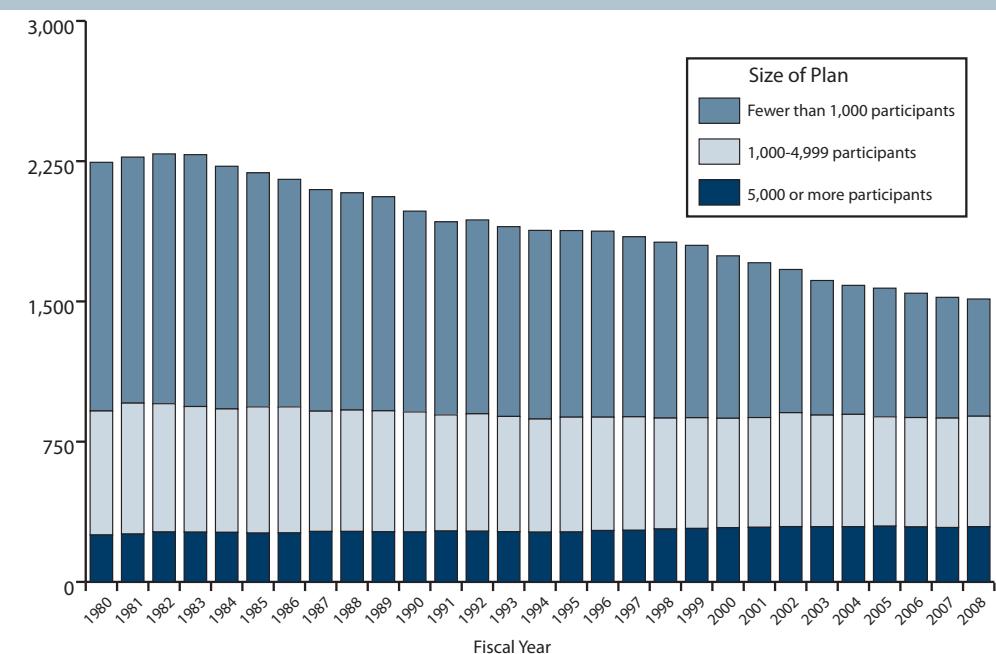

Source: PBGC Annual Reports (1980-2008).

PBGC's Net Position is the difference (with some adjustments) between the insurance program's total assets and total liabilities.

PBGC-Insured Plans (1980-2008) Multiemployer Program

- The total number of multiemployer plans insured by PBGC has declined slowly in the past 26 years.
- This decline primarily reflects the loss of plans with fewer than 1,000 participants.
- This decline is primarily due to plan mergers.

Figure 15

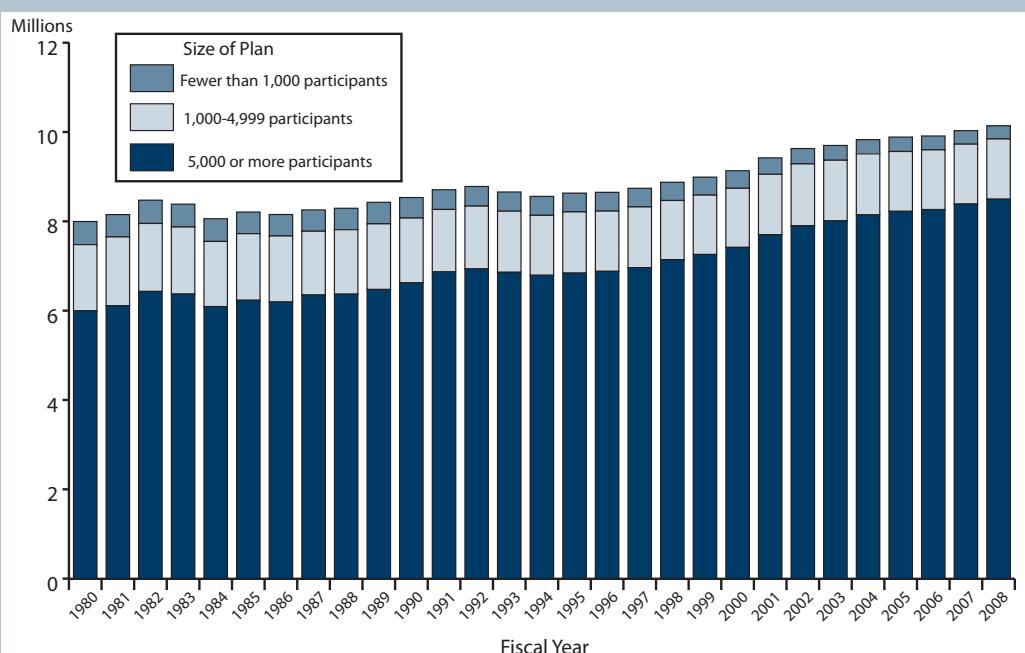

Reference Table M-6 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Premium Filings, various years.

Participants in PBGC-Insured Plans (1980-2008) Multiemployer Program

- In 2008, PBGC provided pension insurance protection to more than 10 million participants in multiemployer plans.
- This represents a 25 percent increase over the total number of participants covered in 1980.
- This increase occurred primarily in plans with 5,000 or more participants.

Figure 16

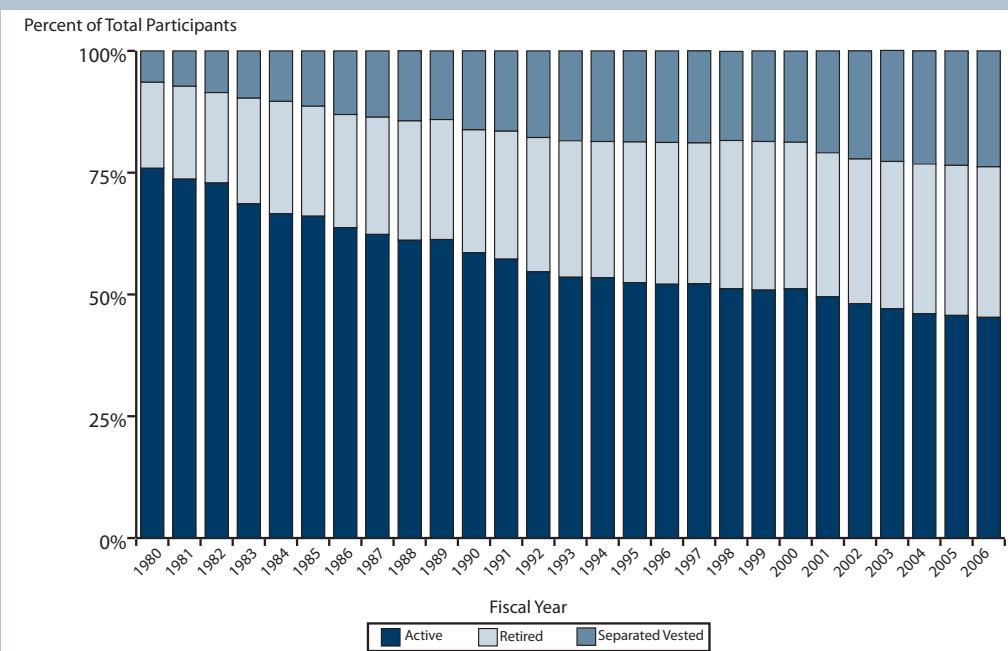

Reference Table M-5 of the PBGC Pension Insurance Data Book 2008.

Source: PBGC Premium Filings, various years.

PBGC-Insured Participants by Participant Status (1980-2006) Multiemployer Program

- Although the total number of multiemployer plan participants that PBGC covers has grown, the percentage of these participants that are active workers fell from 76 percent in 1980 to 45 percent in 2006.

Figure 17

Reference Table M-7 of the PBGC Pension Insurance Data Book 2008.

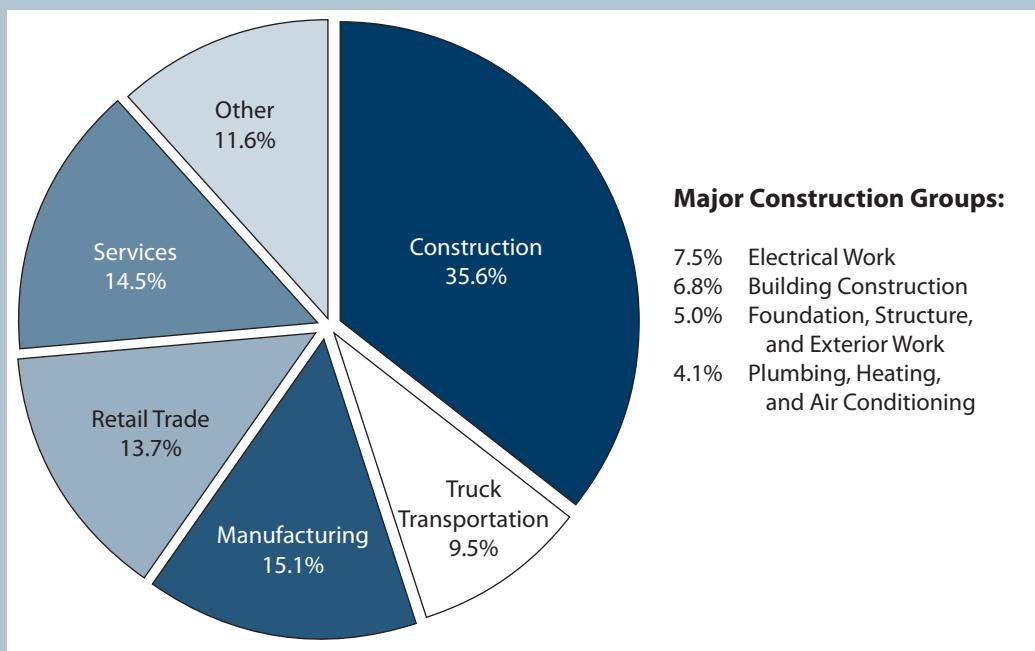

Source: Internal Revenue Service Form 5500 Series filings for multiemployer plans.

Data for plan years prior to 1999 include only plans with 100 or more participants.

PBGC-Insured Participants by Industry (2007) Multiemployer Program

- While PBGC covers workers in all major industrial sectors, the construction trades account for more than one-third of all covered multiemployer plan participants.

Figure 18

Reference Table M-8 of the PBGC Pension Insurance Data Book 2008.

APPENDIX S

Single-Employer Data Tables

PBGC's Single-Employer Program

Under its single-employer program, PBGC insures the pension benefits of participants in most private-sector, single-employer, defined benefit pension plans. A single-employer plan is a plan that was not established pursuant to a collective bargaining agreement between the plan's participants and two or more unrelated employers. A defined benefit plan is a pension plan other than an individual account plan. In a typical single-employer defined benefit plan, benefits are based on a formula that generally includes as inputs years of service and either a flat-dollar amount or the participant's average compensation.

An insured plan must pay PBGC a yearly premium of \$34 per participant for pension benefit insurance coverage in 2009. This per-participant premium rate is adjusted yearly based on changes in the national average wage index, rounded to the nearest whole dollar. Plans that are underfunded (based on a specified measure) must pay PBGC an additional premium of \$9 per \$1,000 of underfunding. This rate is not indexed. Some terminating plans have to pay a termination premium of \$1,250 per participant per year for three years if they undergo a distress or PBGC-initiated plan termination on or after January 1, 2006.

If a plan terminates with insufficient assets to pay all promised benefits, PBGC will usually become statutory trustee of the plan and become responsible for paying benefits to the plan's participants and their beneficiaries. PBGC pays benefits according to the provisions of each individual pension plan, subject to legal limits. The vast majority of the participants in PBGC-trusteed plans receive all the benefits they were promised by their plan. Benefits for some participants may be reduced if 1) their benefits exceed PBGC's maximum guarantee limit, 2) a benefit increase occurred (or a benefit became payable due to a plant shutdown or similar event) within five years of the plan's termination, or 3) a part of their benefit is a supplemental benefit. Additional guarantee restrictions apply if the plan's termination date occurred while the employer was in a bankruptcy proceeding that began on or after September 16, 2006, or if the plan is a commercial passenger airline plan or airline catering plan that elected the 17-year funding relief under the Pension Protection Act of 2006. In addition to paying guaranteed benefits, PBGC pays nonguaranteed benefits to the extent plan assets or recoveries from employers are available and allocated to nonguaranteed benefits under statutory allocation rules.

PBGC does not index benefit payments (i.e., once payments start, they are not increased). However, the maximum guarantee limit is indexed to reflect the increase in national wages. For a plan with a termination date in 2009, the limit is \$4,500.00 per month or \$54,000.00 per year for a single-life annuity beginning at age 65. If the plan's termination date occurred while the employer was in a bankruptcy proceeding that began on or after September 16, 2006, the applicable limit is the limit that applied during the year in which the employer filed for bankruptcy. The limit on the maximum guarantee is adjusted for retirement ages other than 65. The age-adjusted limit that will apply to a given participant is the limit for his or her age at plan termination if he or she has already retired, or the limit for the age at which he or she actually retires. The limit is reduced if the benefit is not paid as a single-life annuity. For example, the limit is reduced if the benefit is paid as a joint-and-survivor annuity.

Table S-1

Net Financial Position of PBGC's Single-Employer Program (1980-2008)

Fiscal Year	Assets (in millions)	Liabilities (in millions)	Net Position (in millions)
1980	\$430	\$524	-\$95
1985	1,155	2,480	-1,325
1990	2,797	4,710	-1,913
1995	10,371	10,686	-315
1996	12,043	11,174	869
1997	15,314	11,833	3,481
1998	17,631	12,619	5,012
1999	18,431	11,393	7,038
2000	20,830	11,126	9,704
2001	21,768	14,036	7,732
2002	25,430	29,068	-3,638
2003	34,016	45,254	-11,238
2004	38,993	62,298	-23,305
2005	56,470	79,246	-22,776
2006	59,972	78,114	-18,142
2007	67,241	80,352	-13,111
2008	61,648	72,326	-10,678

TOTAL	170,942	3,850	\$35,540.2	\$70,392.1	\$34,851.9	\$5,080.2	\$29,771.7

Sources: PBGC Fiscal Year Closing File (9/30/08) and PBGC Case Management System.

Due to rounding of individual items, numbers may not add up across columns.

Trusteed terminations include plans pending trusteeship.

Claims figures shown in this table are calculated on a plan basis and identified with fiscal year of plan termination for each plan.

The annual numbers of trusteed terminations shown in this table may differ from those reported elsewhere as they reflect the fiscal year of plan termination rather than the fiscal year in which the loss was incurred. For example, PBGC became responsible for 67 underfunded terminated plans during FY 2008, but only 19 of these plans had termination dates in earlier fiscal years and are allocated to those years.

Values are subject to change as PBGC completes reviews, establishes termination dates, and determines recoveries.

* Number reported in the PBGC Pension Insurance Data Book 2007 has been revised.

Table S-4

PBGC Claims (1975-2008) Single-Employer Program

Fiscal Year	Total Claims	Claims of Top 10 Firms and Percent of Total Annual Claims	Other Claims and Percent of Total Annual Claims

2008	4,211	639	534	289	81	17	4,292	4,292	653

Sources: PBGC Participant System (PRISM), fiscal year calculations, PBGC Management Reports and PBGC Benefit Payment Reports.

Lump-sum payments include cash-outs of pensions with de minimis present values and backpayments to current pensioners.

Since some payees received both pensions and lump-sum payments, total number of payees may be less than the sum of pensioners and lump-sum recipients.

Excludes participants in plans that are in probable termination status as of end of fiscal year.

Due to rounding of individual items, numbers may not add up across columns.

Hybrid plans incorporate elements of both defined benefit and defined contribution plans but are treated as defined benefit plans. They often express benefits in terms of an account balance. The two most common types of hybrid plans are Cash Balance Plans and Pension Equity Plans.
Because most hybrid plans converted from traditional defined benefit plans, not all participants will receive benefits based on the hybrid plan design.
2007 figures are estimates from PBGC internal calculations. 2006 figures reported last year have been updated to reflect actual Form 5500 filings.

Table S-39

PBGC's Historic Premium Rates Single-Employer Program

For Plan Years Beginning	Flat-Rate Premium (per participant)	Variable-Rate Premium*	Premium Rate for Certain Terminated Plans** (per participant)
September 2, 1974 - December 31, 1977	\$1.00	---	---
1978 - 1985	2.60	---	---
1986 - 1987	8.50	---	---
1988 - 1990	16.00	\$6 per \$1,000 of unfunded vested benefits	---
1991 - 2005	19.00	\$9 per \$1,000 of unfunded vested benefits	---
2006	30.00***	\$9 per \$1,000 of unfunded vested benefits	\$1,250 per year for 3 years
2007	31.00	\$9 per \$1,000 of unfunded vested benefits	\$1,250 per year for 3 years
2008	33.00	\$9 per \$1,000 of unfunded vested benefits	\$1,250 per year for 3 years
2009	34.00	\$9 per \$1,000 of unfunded vested benefits	\$1,250 per year for 3 years

* Only vested liabilities are used when determining underfunding for variable-rate premium payment purposes. Prior to July 1, 1996, the variable-rate premium was capped at various levels. Effective beginning with the 2007 plan year, a cap was imposed on the variable-rate premium for plans of small employers. If all contributing sponsors to the plan and their controlled group members have 25 or fewer employees, the per-participant variable-rate premium for that plan will be capped at \$5.00 times the number of participants in the plan. (The cap for the plan as a whole is effectively \$5.00 times the square of the number of plan participants.) Effective beginning with the 2008 plan year, an exemption that allowed some underfunded plans to escape payment of the variable-rate premium was eliminated and a modification was made to how underfunding is determined for variable-rate premium purposes.

** Applies to certain distress or involuntary pension plan terminations that occur after 2005. For certain airline-related plans that terminate within five years of electing to be covered under special funding rules, the annual termination premium (payable for three years) is \$2,500 per participant.

*** Beginning in 2007, this amount is adjusted annually based on changes in the national average wage index (as defined in section 209(k)(1) of the Social Security Act). The premium rate will not decline even if the national average wage index declines. The adjusted premium rate is rounded to the nearest multiple of \$.1.

2006	186.66	61.11	212.50	73.30	313.8
2007	---	39.78	104.18	65.67	225.1
2008	---	26.78	58.03	46.73	150.0

Definitions:

(A) Underfunding calculated from Internal Revenue Service Form 5500 Series Filings for single-employer plans. Vested liabilities have been adjusted to the PBGC rate that, along with an assumed mortality table, reflects the cost to purchase an annuity at the beginning of the relevant year. The assumed mortality table was UP-84 for 1992 and GAM-83 for 1993-2006. Vested liabilities are used as a proxy for PBGC-guaranteed benefits.

(B) Underfunding data from PBGC premium filings used to calculate the Variable-Rate Premium. Underfunding is based on vested benefits.

(C) Data from filings made under Section 4010 of ERISA, which requires that companies annually provide PBGC with information on their underfunded plans if the firm's aggregate underfunding exceeds \$50 million or there is an outstanding lien for missed contributions exceeding \$1 million or an outstanding funding waiver of more than \$1 million. Underfunding is based on an estimate of vested benefits.

(D) Underfunding for plan sponsors with less than investment-grade bond ratings. Underfunding is based on estimated vested benefits.

(E) Estimated total liabilities are based on all plan liabilities, whether vested or not.

Only (A) and (E) represent the universe of PBGC-insured plans. Firms and plans included in the column (B), (C) and (D) totals may differ from year to year. See "Underfunding Measures in Table S-47" in the Pension Insurance Data Book 2005, pp 16-23, for a further explanation of these measures. The Form 5500 Filings value for 2005 in column (A) has been updated.

Table S-53

PBGC Maximum Guaranteed Benefits (1990-2009)

Single-Employer Program

Year of Plan Termination	Maximum Monthly Guarantee	Maximum Annual Guarantee
1990	\$2,164.77	\$25,977.24
1991	2,250.00	27,000.00
1992	2,352.27	28,227.24
1993	2,437.50	29,250.00
1994	2,556.82	30,681.84
1995	2,573.86	30,886.32
1996	2,642.05	31,704.60
1997	2,761.36	33,136.32
1998	2,880.68	34,568.16
1999	3,051.14	36,613.68
2000	3,221.59	38,659.08
2001	3,392.05	40,704.60
2002	3,579.55	42,954.60
2003	3,664.77	43,977.24
2004	3,698.86	44,386.32
2005	3,801.14	45,613.68
2006	3,971.59	47,659.08
2007	4,125.00	49,500.00
2008	4,312.50	51,750.00
2009	4,500.00	54,000.00

The Employee Retirement Income Security Act of 1974 (ERISA) mandates that the maximum guaranteed amounts be adjusted annually based on changes in the Social Security contribution and benefit base. The maximum guarantee shown applies to workers who retire at age 65. PBGC increases the maximum guarantee for people retiring later than age 65 and reduces it for retirees taking earlier retirement or electing survivor's benefits.

In some instances, where a pension plan has adequate resources or PBGC recovers sufficient amounts, a participant may receive benefits in excess of the maximum guarantee.

The Pension Protection Act of 2006 provides that if a plan terminates while the sponsor is in a bankruptcy entered into after September 16, 2006, the applicable guarantees will generally be those for the year the sponsor entered bankruptcy regardless of the year the plan actually terminates.

APPENDIX M

Multiemployer Data Tables

PBGC's Multiemployer Program

PBGC administers an insurance program for multiemployer defined benefit pension plans that is separate from its single-employer plan insurance program. Multiemployer plans are established pursuant to collective bargaining agreements involving two or more unrelated employers. Multiemployer plans are common in industries such as construction, trucking, mining, the hotel trades, and segments of the grocery business. Some multiemployer plans use a “unit benefit” formula that multiplies a participant’s years of service by a fixed-dollar amount (such as \$15 times 20 years of service) to set the monthly benefit. In most cases, plan trustees establish benefit levels, but some plans set benefits in the collective bargaining process. Multiemployer plans must pay PBGC a yearly premium of \$9.00 per participant for pension benefit insurance coverage in 2009. This per-participant premium rate is adjusted annually to the national average wage index, rounded to the nearest whole dollar.

Unlike a plan termination in the single-employer program, a multiemployer plan termination does not trigger the PBGC guarantee.¹ A terminated plan continues to pay full plan benefits so long as it has sufficient assets to do so.² A plan that does not have enough assets to pay plan benefits is allowed to suspend payment of that portion of the benefit that exceeds the PBGC guarantee level. The current PBGC maximum guaranteed benefit for multiemployer plans is 100 percent of the first \$11 of the plan’s monthly benefit rate plus 75 percent of the next \$33 of the plan’s monthly benefit rate, multiplied by the participant’s years of service.³ The maximum guaranteed benefit is not indexed.

If a plan becomes insolvent despite benefit cutbacks, PBGC will provide financial assistance to the plan —typically as a loan—in the amount necessary to pay guaranteed benefits and administrative expenses. Few plans receiving financial assistance from PBGC are likely to recover sufficiently to repay all the monies lent to them. An allowance has been established on PBGC’s financial records to account for financial assistance that is not expected to be repaid.

¹ PBGC trustee 10 multiemployer plans prior to October 1980 and continues to pay monthly benefits to participants in these plans.

² In some situations, the trustees must amend the plan to eliminate benefits that are not eligible for the PBGC guarantee, generally benefit increases that are less than five years old.

³ Multiemployer plans that received financial assistance from PBGC at any time during the period from December 22, 1999, to December 21, 2000, receive a lower per-participant monthly benefit guarantee rate.

Table M-1

Net Financial Position of PBGC's Multiemployer Program (1980-2008)

Fiscal Year	Assets (in millions)	Liabilities (in millions)	Net Position (in millions)

Sources: PBGC Annual Reports and internal calculations.

¹ A number of plans received financial assistance in more than one year.² Lump-sum closeout payments were made to these insolvent multiemployer plans.³ These plans received periodic payments before receiving lump-sum payments.⁴ Three of these five plans received periodic payments before receiving lump-sum payments.⁵ Total for plan columns represents the total number of multiemployer plans that ever received the stated type of financial assistance from PBGC's Multiemployer Insurance Program.⁶ Only one plan has repaid any of its past financial assistance. That plan repaid only the principal amount of the loans it received.

Source: Internal Revenue Service Form 5500 Series Filings for multiemployer plans. Data for plan years prior to 1999 include only plans with 100 or more participants.

Due to rounding of individual items, numbers in rows may not add up to totals and percentages may not add up to 100%.

Vested liabilities have been adjusted to an interest rate that, along with an assumed mortality table, reflects the cost to purchase an annuity at the beginning of the relevant year.
The assumed mortality table was UP-84 for 1990-1992 and GAM-83 for 1993-2006.

Estimates for 2005 reported last year have been updated.

Table M-13

Plans, Participants, and Funding of PBGC-Insured Plans by Funding Ratio (2006) Multiemployer Program

Funding Ratio	Plans	Participants (in thousands)	Participants		Total Liabilities* (in millions)	Undertesting (in millions)	Overtesting (in millions)
			Less than 40%	40% - 49%			
Less than 40%	37	2.4%	249	2.5%	\$12,101	2.0%	\$7,902

Due to rounding of individual items, numbers may not add up to 100%.

*Vested liabilities have been adjusted to an interest rate that, along with the GAM-83 mortality table, reflects the cost to purchase an annuity at the beginning of 2006.

** Less than \$500,000.

*** Less than 0.05 of one percent.

Table M-15

PBGC Maximum Guaranteed Benefits (1980-2009) Multiemployer Program

Date of Plan Insolvency	Monthly Benefit Formula <small>(30 Years of Service)*</small>	Maximum Monthly Guarantee <small>(30 Years of Service)*</small>	Maximum Annual Guarantee <small>(30 Years of Service)*</small>
September 27, 1980, to December 21, 2000	The participant's years of service multiplied by the sum of: (1) 100% of the first \$5 of the monthly benefit accrual rate -plus- (2) 75% of the next \$15 of the monthly benefit accrual rate	\$487.50	\$5,850.00
On or after December 22, 2000**	The participant's years of service multiplied by the sum of: (1) 100% of the first \$11 of the monthly benefit accrual rate -plus- (2) 75% of the next \$33 of the monthly benefit accrual rate	\$1,072.50	\$12,870.00

* The formula presumes that the workers' monthly benefits are calculated by multiplying the monthly benefit accrual rate (a plan-specified dollar amount) times years of service. If the monthly benefit accrual rate prior to December 22, 2000, was less than \$20 per year of service or if the accrual rate after December 21, 2000, is less than \$44 per year of service then the maximum benefit guarantee for a participant with 30 years of service will be lower than the amounts shown. Note that there is no cap on applicable years of service; 30 years was selected for illustrative purposes only.

** The increased guarantee does not apply to multiemployer plans that received financial aid from PBGC between December 22, 1999, and December 21, 2000. The original, lower monthly benefit guarantee continues to apply to participants in these plans.

Table M-16

**PBGC's Historic Premium Rates
Multiemployer Program**

For Plan Years Beginning	Premium Rate (per participant)
September 2, 1974 - August 31, 1979	\$0.50
September 1, 1979 - September 26, 1980	\$0.50 for plan years beginning in September 1979, growing gradually to \$1.00 for plan years beginning September 1, 1980, to September 26, 1980
September 27, 1980 - September 26, 1984	\$1.40
September 27, 1984 - September 26, 1986	\$1.80
September 27, 1986 - September 26, 1988	\$2.20
September 27, 1988 - December 31, 2005	\$2.60
2006 - 2007	\$8.00*
2008 - 2009	\$9.00

* Beginning in 2007, this amount is adjusted annually based on changes in the national average wage index (as defined in section 209(k)(1) of the Social Security Act). The premium rate will not decline even if the national average wage index declines. The adjusted premium rate is rounded to the nearest multiple of \$.1.
