# SECTION 1 SUMMARY OF 2017 WAYBILL PROCESSING

Railinc has collected and processed 670,496 waybills for inclusion in the 2017 Carload Waybill Sample. Of this total, 670,496 (100 percent) were submitted electronically. This 2017 figure is greater than 2016 levels.

As of the March 1, 2018 cutoff date for processing the 2017 Sample, there were no late reporting roads.

\*Table 1-2 provides a detailed breakdown of the total 2017 Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Both raw and factored-to-population data for carloads, tonnage, and line-haul revenue are provided, in addition to a count of the number of waybills from which the data was derived.

Table 1-3 provides a Three Year (2015–2017) **Carload** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC).US, Canadian and Mexican Origins.

\*Table 1-4 provides a Three Year (2015–2017) **Revenue** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC).US, Canadian and Mexican Origins.

Table 1-5 provides a Three Year (2015–2017) **Tonnage** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC).US, Canadian and Mexican Origins. Figure 1-1 provides graphical views of the three-year history of the top six commodity groups and all others. Trending per STCC can be seen across those years.

\*Table 1-6 provides a breakdown similar to that of [Table 1-2](#), for 2017 Waybills with United States origins only. U.S. origins accounted for 634,673 originated waybills (94.7% percent of those sampled).

Table 1-7 provides a Three Year (2015–2017) **Carload** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). US Origins Only.

\*Table 1-8 provides a Three Year (2015–2017) **Revenue** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). US Origins Only.

Table 1-9 provides a Three Year (2015–2017) **Tonnage** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). US Origins Only.

Figure 1-2 provides graphical views of the three-year history of the top six commodity groups and all others. US origins only. Trending per STCC can be seen across those years.

\*Table 1-10 provides a breakdown similar to that of [Table 1-2](#), for 2017 Waybill traffic for Canadian originations only. Canadian originations were a larger percent of the total sample than in 2016, accounting for 34,447 originated waybills, 5.14% of the total sample.

Table 1-11 provides a Three Year (2015–2017) **Carload** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Canadian Origins Only.

\*Table 1-12 provides a Three Year (2015–2017) **Revenue** History from Waybill Statistics by

two-digit Standard Transportation Commodity Code (STCC). Canadian Origins Only.

Table 1-13 provides a Three Year (2015–2017) **Tonnage** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Canadian Origins Only.

Figure 1-3 provides graphical views of the three-year history of the top six commodity groups and all others. Canadian origins only. Trending per STCC can be seen across those years.

\*Table 1-14 provides a breakdown similar to that of Table 1-2, for 2017 Waybill traffic for Mexican originations only. Mexican originations were a slightly larger percent of the total sample than in 2016, accounting for 1,373 originated waybills, 0.2% of the total sample.

Table 1-15 provides a Three Year (2015–2017) **Carload** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Mexican Origins Only.

\*Table 1-16 provides a Three Year (2015–2017) **Revenue** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Mexican Origins Only.

Table 1-17 provides a Three Year (2015–2017) **Tonnage** History from Waybill Statistics by two-digit Standard Transportation Commodity Code (STCC). Mexican Origins Only.

Figure 1-4 provides graphical views of the three-year history of the top six commodity groups and all others. Mexican Origins Only. Trending per STCC can be seen across those years.

***\*Railroads are permitted to “mask” contract revenue with a calculated figure. Because these figures may not represent actual revenue, use of this revenue data in any type of comparison may lead to wrong or misleading results.***

*Table 1-1. Standard Transportation Commodity Code Major Industry Group Numbers*

<b>GROUP</b>	<b>DESCRIPTION</b>
01	Farm Products
08	Forest Products
09	Fresh Fish or Other Marine Products
10	Metallic Ores
11	Coal
13	Crude Petroleum, Natural Gas or Gasoline
14	Nonmetallic Minerals; except Fuels
19	Ordnance or Accessories
20	Food or Kindred Products
21	Tobacco Products; except Insecticides—see Major Industry Group 28
22	Textile Mill Products
23	Apparel, or Other Finished Textile Products or Knit Apparel
24	Lumber or Wood Products; except Furniture—see Major Industry Group 25
25	Furniture or Fixtures
26	Pulp, Paper or Allied Products
27	Printed Matter
28	Chemicals or Allied Products
29	Petroleum or Coal Products
30	Rubber or Miscellaneous Plastics Products
31	Leather or Leather Products
32	Clay, Concrete, Glass or Stone Products
33	Primary Metal Products, including Galvanized; except Coating or other Allied Processing—see Major Industry Group 34
34	Fabricated Metal Products; except Ordnance—see Major Industry Groups 19, 35, 36 or 37
35	Machinery; except Electrical—see Major Industry Group 36
36	Electrical Machinery, Equipment or Supplies
37	Transportation Equipment
38	Instruments, Photographic Goods, Optical Goods, Watches or Clocks
39	Miscellaneous Products of Manufacturing
40	Waste or Scrap Materials Not Identified by Producing Industry
41	Miscellaneous Freight Shipments
42	Containers, Carriers or Devices, Shipping, Returned Empty
43	Mail, Express or Other Contract Traffic
44	Freight Forwarder Traffic
45	Shipper Association or Similar Traffic
46	Miscellaneous Mixed Shipments
47	Small Packaged Freight Shipments
48	Hazardous Wastes
49	Hazardous Materials
50	Bulk Commodity Shipments in Boxcars

## SECTION 2 ERROR ANALYSIS AND CORRECTIVE ACTION

During final editing stage, all data fields of the waybill are evaluated. In the case of missing or illogical data one of 71 error flags may be placed at the end of the waybill record to alert the data user to data exceptions. In addition, any data fields with a value beyond the normal range seen in the industry (e.g., cars loaded with excessively heavy weights or waybills with excessively high revenues per car), or those depicting out-of-the-ordinary movements (e.g., the movements of COFC containers in non-intermodal units), will also be flagged. These error flags are used to mainly identify missing data and to alert the person costing the waybill to abnormalities not usually taken into account by default values in Rail Form A or UCRS costing.

[Table 2-2](#) lists Proxy Equipment Types for the 2017 Carload Waybill Sample

Listed below are the types of errors found in the 2017 data. In each case, these “errors” are concerned with equipment registration in the Umler file.

Error Code(s)	Explanation and Corrective Action to be Taken.
08 / 13	<p>These errors are due to the fact that not all intermodal equipment (error code 13) and not all rail cars (error code 08) are listed in Umler.</p> <p>In order to provide more complete data, Railinc has flagged privately owned intermodal units since 1994 thus accounting for the large increase in intermodal error. While there has been an increase in reporting of private intermodal units, many of these units are still not reported in Umler.</p> <p>As the gross ton-mile is a dominant factor in rail costing, the type (and weight) of the car should be known. These equipment identification “errors” accounted for 100.0% of all primary waybill errors.</p> <p>Using the loading patterns exhibited in the 2005 data, the Surface Transportation Board has allowed the Railinc processing team to use proxy container or trailer types when the reported unit type is unknown or not registered in Umler.</p>

Table 2-1. Umler Error Codes and Messages

Code	Message
<b>01</b>	<p><b>WAYBILL ID IS INVALID</b></p> <p>The waybill ID must be '1' if MRI, and 'blank' if Hardcopy. During each edit, the AAR/Railinc will calculate the proper waybill ID, based on the sampled waybill's stratum number. If the stratum number is 1, 2, 3, 4 or 5, the waybill is MRI and the ID should be '1'. If the stratum number is 6, 7 or 8, the waybill is hardcopy and the ID should be 'blank'. (See item 28)</p> <p><b>Note:</b> The Waybill ID, wherever referenced, applies only to the record format of the 'raw' sampled waybill, and not to that of the final master file waybill.</p>
<b>02</b>	<p><b>INVALID WAYBILL NUMBER</b></p> <p>The waybill number must be numeric.</p>
<b>03</b>	<p><b>INVALID WAYBILL DATE</b></p> <p>The waybill date must fall before December 31, 1999. The waybill was not processed for the current waybill year if the date was out of bounds.</p>
<b>04</b>	<p><b>INVALID ACCOUNTING PERIOD</b></p> <p>The accounting period date must be numeric. The month must be greater than '0' and less than '17'.</p> <p><b>Note:</b> Accounting period months 13, 14, 15 and 16 are valid if the road submits quarterly (13 = First Quarter, 14 = Second Quarter, etc.).</p>
<b>05</b>	<p><b>INVALID CARLOAD FIELD</b></p> <p>The carload field must be numeric and greater than zero.</p>
<b>06</b>	<p><b>INVALID CAR INITIAL</b></p> <p>The car initial cannot be blank or numeric.</p>
<b>07</b>	<p><b>INVALID CAR NUMBER</b></p> <p>The car number must be numeric.</p>
<b>08</b>	<p><b>Umler RECORD NOT FOUND</b></p> <p>The car initial and number combination was not found in the Umler File.</p>
<b>09</b>	<p><b>INVALID TOFC/COFC SERVICE CODE</b></p> <p>The TOFC/COFC Service Code (STB Alternate Code) specified is not a valid code.</p>

<b>Code</b>	<b>Message</b>
<b>10</b>	<p><b>INVALID TOFC/COFC LOAD COUNT</b></p> <p>If a TOFC/COFC move is indicated, the number of TOFC/COFC units (load count) must be numeric, and either (1) less than the sum of waybill carloads multiplied by three, or (2) identified as a valid stack train movement.</p>
<b>11</b>	<p><b>INVALID INTERMODAL CAR INITIAL</b></p> <p>If a TOFC/COFC move is indicated, the intermodal car initial cannot be blank or numeric.</p>
<b>12</b>	<p><b>INVALID INTERMODAL CAR NUMBER</b></p> <p>If a TOFC/COFC move is indicated, the intermodal car number must be numeric.</p>
<b>13</b>	<p><b>NO TOFC/COFC Umler RECORD FOUND</b></p> <p>The TOFC/COFC unit initial and number combination could not be found in the Umler File.</p>
<b>14</b>	<p><b>Umler EQUIPMENT TYPE CODE NOT P, Q OR S</b></p> <p>The car initial and number combination is not assigned to an intermodal flat car. If the car carrying a trailer or container is not a flat car of any type, flag 55 is placed in the error field.</p>
<b>15</b>	<p><b>INVALID STCC NUMBER</b></p> <p>The STCC number could not be found in the STCC Master file.</p>
<b>16</b>	<p><b>BILLED WEIGHT STCC</b></p> <p>The billed weight ton equivalent, divided by the number of waybill carloads, cannot be less than or greater than the range specified in the table look-up (by two-digit STCC). The range represents positive values plus and minus 4 standard deviations from the mean.</p>
<b>17</b>	<p><b>INVALID ACTUAL WEIGHT</b></p> <p>If the actual weight field is not blank, it must be numeric.</p>
<b>18</b>	<p><b>INVALID FREIGHT REVENUE</b></p> <p>The freight revenue must be numeric. If the freight revenue amount is zero, the transit code must be either '1' or '9'. The freight revenue amount, divided by the number of waybill carloads, cannot be less than 1 or greater than the table look-up value (by two-digit STCC). The range represents positive values plus and minus 4 standard deviations from the mean.</p>

<b>Code</b>	<b>Message</b>
<b>19</b>	<b>INVALID TRANSIT CHARGE</b> If the transit charge field is not blank, it must be numeric.
<b>20</b>	<b>INVALID MISC CHARGE</b> If the miscellaneous charge field is not blank, it must be numeric.
<b>21</b>	<b>INVALID TRANSIT CODE</b> The transit code must be either '0', '1' or '9'.
<b>22</b>	<b>INVALID INTERMODAL CODE</b> The intermodal code must be either '1', '2' or '9'.
<b>23</b>	<b>INVALID TYPE-MOVE CODE</b> The type-move code must be either '0', '1', '2', '3' or '9'.
<b>24</b>	<b>INVALID TYPE-MOVE-BY-WATER</b> The type-move-by-water code must be either '0', '1', '2', '3', '4' or '5'.
<b>25</b>	<b>INVALID TRUCK-FOR-RAIL CODE</b> The truck-for-rail code must be either '0', '1' or '9'.
<b>27</b>	<b>INVALID REBILL CODE (MRI and Manual)</b> The rebill code must be either '0', '1', '2' or '3'.

Code	Message
28	<p data-bbox="391 275 716 306"><b>INVALID STRATUM ID</b></p> <p data-bbox="391 327 1398 422">If the waybill was submitted by MRI means (i.e., the waybill ID is 1), the Stratum ID will be calculated based on the number of carloads on the waybill. If the MRI waybill has:</p> <ul data-bbox="440 443 943 632" style="list-style-type: none"> <li>• 1-2 carloads, the stratum ID is 1.</li> <li>• 3-15 carloads, the stratum ID is 2.</li> <li>• 16-60 carloads, the stratum ID is 3.</li> <li>• 61-100 carloads, the stratum ID is 4.</li> <li>• 101-9999 carloads, the stratum ID is 5.</li> </ul> <p data-bbox="391 653 1065 684">If the Hardcopy waybill (i.e. the waybill ID is blank) has:</p> <ul data-bbox="440 705 927 810" style="list-style-type: none"> <li>• 1-5 carloads, the stratum ID is 6.</li> <li>• 6-25 carloads, the stratum ID is 7.</li> <li>• 26-9999 carloads, the stratum ID is 8.</li> </ul> <p data-bbox="391 831 1357 894">These calculations are made each time the sample is edited. Please note that the ‘Waybill ID’ is only applicable to the record format for the ‘raw’ sampled waybill.</p>
29	<p data-bbox="391 940 894 972"><b>INVALID SUBSAMPLE ID (MRI only)</b></p> <p data-bbox="391 993 1382 1098">The subsample ID must be either ‘1’, ‘2’, ‘3’ or ‘4’. At this stage in processing this field is blank for Hardcopy waybills. During final processing, Railinc will calculate subsample codes for Hardcopy waybills.</p>
31	<p data-bbox="391 1140 894 1171"><b>INVALID REPORTING 260 NUMBER</b></p> <p data-bbox="391 1192 1211 1224">The reporting 260 number was not found in the Railroad Register file.</p>

<b>37</b>	<b>2ND 260 NUMBER IS INVALID</b> The Rule 260 number for the 2nd bridge railroad could not be found in the Railroad Register file.
<b>38</b>	<b>3RD RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>39</b>	<b>3RD 260 NUMBER IS INVALID</b> The Rule 260 number for the 3rd bridge railroad could not be found in the Railroad Register file.
<b>40</b>	<b>4TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>41</b>	<b>4TH 260 NUMBER IS INVALID</b> The Rule 260 number for the 4th bridge railroad could not be found in the Railroad Register file.
<b>42</b>	<b>5TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>43</b>	<b>5TH 260 NUMBER IS INVALID</b> The Rule 260 number for the 5th bridge railroad could not be found in the Railroad Register file.
<b>44</b>	<b>6TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>45</b>	<b>6TH 260 NUMBER IS INVALID</b> The Rule 260 number for the 6th bridge railroad could not be found in the Railroad Register file.
<b>46</b>	<b>7TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.

<b>Code</b>	<b>Message</b>
<b>47</b>	<b>7TH 260 NUMBER IS INVALID</b> The Rule 260 number for the 7th bridge railroad could not be found in the Railroad Register file.
<b>48</b>	<b>8TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>49</b>	<b>8TH 260 NUMBER IS INVALID</b> The Rule 260 number for the 8th bridge railroad could not be found in the Railroad Register file.
<b>50</b>	<b>9TH RULE 260 ABBREV IS INVALID</b> The Rule 260 junction abbreviation could not be found in the Reload Location file.
<b>51</b>	<b>INVALID TERMINATION 260 NUMBER</b> The Rule 260 number for the termination railroad could not be found in the Railroad Register file.
<b>52</b>	<b>TERM FSAC NOT VALID</b> The termination FSAC and Rule 260 railroad number combination could not be found in the CSM file.
<b>53</b>	<b>INVALID INTER-INTRA STATE CODE</b> If the origin state, destination state, and all states in the routing information are the same, the code must be '2'. If the states are different, the code must be '1'. This is calculated each time the waybill sample is edited.
<b>54</b>	<b>REVENUE AMOUNT IS ZERO</b> If the revenue amount is zero, the transit code must be '1' or '9'.
<b>55</b>	<b>TC Umler REC IS NOT A FLAT CAR</b> The car carrying the TOFC/COFC unit is not a flat car of any type (i.e., Q, P, S or F). (Refer to error flag 14)
<b>56</b>	<b>REVENUE PER TONMILE</b> The revenue per ton mile is not in the range established for the 2-digit STCC.

<b>Code</b>	<b>Message</b>
<b>57</b>	<b>BILLED WEIGHT CAPACITY</b> Billed weight is greater than load limit.
<b>58</b>	<b>TRANSBORDER</b> Transborder code must be '0', '1', or '2'.
<b>59</b>	<b>CONTRACT</b> Contract code must be '0' or '1'.
<b>60–63</b>	<b>NOT USED</b>
<b>64</b>	<b>INVALID NO OF WAYBILLS</b> The number of waybills field must be numeric.
<b>65</b>	<b>INVALID REPORTING FREQUENCY</b> The reporting frequency must be either '1' or '2'.
<b>66</b>	<b>INVALID SERIAL NUMBER</b> The serial number must be numeric.
<b>67</b>	<b>SAMPLE DENSITY CHECK</b> The population count for each stratum is included in the JCL for each waybill sample edit. The AAR/Railinc checks the validity of the sample by comparing the expected sample density with the actual density. <b>Note:</b> This is not an error flag. If there is a discrepancy between the expected and actual sample densities, an error message is printed on the edit program output.
<b>68</b>	<b>SAMPLE SIZE CHECK</b> The reported sample size for each stratum is included in the JCL for each waybill sample edit. The AAR/Railinc checks the validity of the sample by comparing the expected sample size with the actual sample size. <b>Note:</b> This is not an error flag. If there is a discrepancy between the expected and actual sample sizes, an error message is printed on the edit program output.
<b>69</b>	<b>FIRST RULE INTERCHANGE IS MISSING</b> Although an interline shipment is indicated, no first junction information has been provided.

<b>Code</b>	<b>Message</b>
<b>70</b>	<b>SECOND RULE INTERCHANGE IS MISSING</b> Although an interline shipment is indicated, no second junction information has been provided.
<b>71</b>	<b>THIRD RULE INTERCHANGE IS MISSING</b> Although an interline shipment is indicated, no third junction information has been provided.

# 2017 Reporting Railroads

## Monthly Reporting Road

Burlington Northern & Santa Fe (BNSF-777)  
Canadian National (CN—103)  
C P Rail System (CPRS-105)  
CSX Transportation (CSXT-712)  
Union Pacific (UP-802)  
Kansas City Southern (KCS—400)  
Norfolk Southern (NS—555)

## Quarterly Reporting Roads

Arkansas Louisiana & Mississippi (ALM—016)  
Apache Railway (APA—011)  
Atlantic & Western Railway (ATW-025)  
Bay Line (BAYL—088)  
Birmingham Terminal Railway (BHRR—849)  
Buffalo & Pittsburgh (BPRR—154)  
Cedar Rapids & Iowa City (CIC—111)  
Central Maine and Quebec (CMQ—622)  
Chattahoochee Industrial Railroad (CIRR—222)  
Columbia & Cowlitz Railway (CLC—163)  
Chicago South Shore & South Bend (CSS—168)  
Columbus & Greenville (CAGY—177)  
DeQueen and Eastern (DQE—200)  
Escanaba & Lake Superior Railroad (ELS—241)  
Florida East Coast (FEC - 263)  
Georgia Central Railway (GC—395)  
Illinois & Midland Railroad (IMRR—361)  
Indiana Rail Road (INRD—780)  
Iowa Interstate Railroad (IAIS—316)  
Louisville & Indiana Railroad (LIRC—434)  
Lake State Railway (LSRC - 408)  
Little Rock & Western Railway (LRWN-485)  
Lake Superior and Ishpeming (LSI—425)  
Maryland Midland Railway (MMID - 495)  
M&B Railroad (MNBR—480)

Montana Rail Link (MRL—871)  
Mississippi Export Railroad (MSE—506)  
New England Central Railroad (NECR—496)  
New York & Atlantic Railway (NYA—501)  
New York Susquehanna & Western (NYSW—546)  
Paducah & Louisville (PAL—907)  
Providence and Worcester (PW—631)  
Red River Valley (RRVW— 321)  
Rochester & Southern (RSR—941)  
Rockdale Sandow & Southern (RSS—675)  
Sand Springs Railway (SS-707)  
ST Rail System (ST-746)  
Toledo Peoria & Western (TPW—769)  
Trona Railway (TRC—779)  
Tomahawk Railway (TR—772)  
Twin Cities & Western (TCWR—768)  
Vermont Railway (VTR—817)  
Wheeling & Lake Erie (WE—856)  
Wisconsin & Southern (WSOR—879)

## Proxy Equipment Types for the 2017 Carload Waybill Sample

The proxy equipment type codes are used to fill in waybill records with missing car type values. The car type fields are AAR Equipment Type Codes (columns 298-301 in 432-byte file; 286-289 in 900-byte file) and Mechanical Designation (columns 302-305 in the 432-byte file; 290-293 in 900-byte file).

The proxy equipment type code for a 5-digit STCC code is the most popular car type for that STCC code in the current year waybill sample. If all waybills for that STCC are missing the car types in that year, the one from previous year's sample is chosen. If the STCC does not occur in the previous year's sample, the most popular equipment type code for the closest STCC code is selected.

## **SECTION 3 DATA EXCEPTIONS**

Overall, there were no major deviations in waybill data quality from specifications given by the Surface Transportation Board. The following tables detail all known data exceptions and sampling deviations in the 2017 Carload Waybill Sample. Efforts to correct these problems have already been made.

As of December 31, 2005, all electronic waybill submitters whom Railinc was providing pre edit corrections have addressed their data quality. It is important to note that the high level of cooperation between the railroads and Railinc has resulted in the 2017 Waybill Sample being free of all but equipment registration related errors.

### **Railinc Waybill Correction Process**

Due to the railroads ability to correct errors (or make program modifications), Railinc no longer makes these corrections for the submitting carriers. Other errors are individually validated, and all errors are thoroughly documented and returned to the carrier for correction and/or verification. The entire corrected file is then returned to Railinc for re-processing. If no errors are found the file is clean and the 432 byte file can be created. If errors are still in the file they are sent back to the carrier for correcting. Again the carrier will send back the entire file.

## Railroad-Wide Corrections

1. Valid, Umler-registered intermodal flat car initials and numbers are used to replace 'dummy' flat car initials and numbers on intermodal shipment waybills.
2. Specific rail-owned, Umler-registered trailers and containers unit initials and numbers are used to replace 'dummy' TOFC/COFC unit initials and numbers on intermodal shipment waybills.
3. TOFC Plan code 'X' is placed on any intermodal shipment waybill whose TOFC Plan code is a blank or zero.
4. Junction abbreviation spellings are adjusted to comply with Accounting Rule 260 abbreviations.
5. Freight Station Accounting Codes (FSAC) are validated for accuracy against Railinc Business Services Division master files and the Waybill Section's database.
6. Standard Transportation Commodity Codes (STCC) are identified and adjusted to comply with Industry Reference Files.
7. Waybills which list very high or low billed weights are individually verified (e.g., heavy load capacity cars, or intermodal shipments with weights below one ton); if the weight is valid for the waybill, the billed weight error flag is removed after the final edit procedure.
8. Waybills which list high freight revenues are verified individually (e.g., trans-continental movements of hazardous materials); if the revenue is valid for the waybill, the revenue error flag is removed after the final edit procedure.
9. Intermodal waybills which were processed after October 1, 2010 used the dummy car initial number 'AARX 999999'

## Contract Rate Flag

Since the implementation of the Staggers Act in 1980, partial rail deregulation has allowed railroads and shippers to enter into contracts. Revenue-related information regarding these contracts is considered highly sensitive, and is often subject to confidentiality clauses within the contracts. As a result, it's apparent that, despite increases in the number of contracts (which in actuality reduced railroad revenues), data from the Waybill Sample indicated that the opposite had occurred. This was due to the reporting of 'normal' tariff rates instead of the lower contract rates in the Waybill Sample.

Recognizing this deficiency and the confidentiality concern put forth by a major Class I railroad, the ICC in 1986 instituted a pilot program whereby that road could report calculated or factored revenues in place of actual contract revenues. Although the railroad could report a tariff value in place of the contract rate, accurate estimation of the actual contract rate would still be required, as the relationship between the reported tariff rate and actual contract rate (at the three-digit STCC level) must be made available to the Surface Transportation Board for use in internal analysis.

These calculated revenues are constructed at the three-digit STCC level and are indicated by the use of one of the following numeric values in the Contract Rate Flag field of the sampled waybill record:

- (0) = Not specifically a contract rate.
- (1) = The freight revenue is a calculated figure which has been derived either from existing tariffs or from appropriate values if no tariff is in place (at the 3-digit STCC level).

## TTX Train Assignments

The TTX Company assigns Car Initials and Equipment Type Code by the Car Number and, based upon need, frequently and repeatedly reassigns series of Car Numbers to different initials and equipment types. Due to the confusion that could be caused by this method, Railinc's Umler database maintains only the most recent car initial/number/type assignments for TTX equipment. While the initial car initial/number assignment usually referred to intermodal flatcars, subsequent assignment may be related to flatcars.

This impacted upon the Waybill Sample during Railinc's final edit procedures as the Umler file locates the flat car by comparing the car number with its assigned car initial and equipment type. The car initial and car type code currently assigned to the particular car number are written onto the edited waybill record, and error flag '14' is appended to the record if the equipment type code is no longer 'P', 'Q' or 'S'. However, at the time of the waybill movement, the car number was most likely assigned to a different car initial, and equipment type code 'P', 'Q' or 'S'.

To prevent this situation from resulting in a large number of waybill errors (Error Code 14 - INTERMODAL MOVEMENT NOT ON A FLATCAR), the standard dummy intermodal flatcar initial/number combination AARX 999999 (effective October 1, 2010) was inserted in instances of traditional TOFC/COFC movements.

# SECTION 4 2017 WAYBILL RECORD LAYOUTS AND WAYBILL REFERENCES

The following documentation is included in this section:

- I. 2017 SURFACE TRANSPORTATION BOARD CARLOAD WAYBILL SAMPLE
  - A. 900-byte STB Waybill File Record Layout
  - B. 900-byte STB Waybill Data Element Descriptions
- II. DEPARTMENT OF COMMERCE
  - A. Business Economic Area (BEA) Codes (Revised 2006)
  - B. Business Economic Area (BEA) Codes by County Listing
- III. 2017 SURFACE TRANSPORTATION BOARD PUBLIC USE WAYBILL
  - A. 247-byte Record Layout
  - B. 247-byte Data Element Descriptions
- IV. WAYBILL REFERENCES
  - A. STCC<sup>®</sup> Headers
  - B. Surface Transportation Board Car Type Code
  - C. Umler<sup>®</sup> Field Descriptions
  - D. AAR Equipment Type Code (Umler<sup>®</sup>)
  - E. US Census Regions
  - F. CS54 Group Codes

## 900-byte STB Waybill Data Element Descriptions

For fields 1 through 179 the following list describes the proper coding and interpretation of the Carload Waybill Statistics at the conclusion of processing by the AAR/Railinc for the Sample. Fields 180 through 192 are added to each record by the STB.

*Table 4-2. 900-Byte Waybill File Record Data Element Descriptions*

Field	Description
<b>1</b>	<p><b>Unique Serial Number</b> (6-digit numeric)</p> <p>To allow for unique identification of waybills, the AAR/Railinc assigns a six-digit number to all waybills processed. Hardcopy (FTP) waybills are assigned serial numbers in the 100,000 to 199,999 range. MRI waybills are assigned serial numbers in the 200,000 to 999,999 range and 000,000 to 099,999<sup>5</sup>.</p>
<b>2</b>	<p><b>Waybill Number</b> (6-digit numeric)</p> <p>The waybill number is the number an originating railroad assigns to each waybill document<sup>1</sup>.</p>
<b>3</b>	<p><b>Waybill Date</b> (6-digit numeric)</p> <p>The waybill date is the date on which the originating railroad prepares the waybill (mmddccyy) where, mm = month, dd = day, cc = century, yy = year<sup>1</sup>.</p>
<b>4</b>	<p><b>Accounting Period (Month, Year)</b> (4-digit numeric)</p> <p>The accounting period is the month and year during which the study waybill is entered into the railroad's revenue accounting system. This information is subsequently reflected in the net income statement of the company for the specified account month (mmccyy) where, mm = month, cc = century, yy = year<sup>1</sup>.</p>

Field	Description
5	<p><b>Number of Carloads</b> (4-digit numeric)</p> <p>The total number of carloads on the sampled waybill<sup>1</sup>.</p>
6	<p><b>Car Initials</b> (4-character alpha)</p> <p>The car initials are the identification of car ownership as recorded in The Official Railway Equipment Register, issued by the Association of American Railroads. If the waybill covers a multiple car movement, the initials of the first car are entered<sup>1</sup>.</p>
7	<p><b>Car Number</b> (6-digit numeric)</p> <p>The car number is assigned by the owner and, when combined with the owner's car initial code, uniquely identifies the freight car used in the move. If the waybill covers a multiple car movement, the number of the first car is entered<sup>1</sup>.</p>
8	<p><b>TOFC/COFC Service Code</b> (3-digit alphanumeric, space fill)</p> <p>The code for the Intermodal Service Code (ISC) must be entered in the first position of the field. If possible, when different ISCs are used during the course of the sampled waybill movement, enter the code for the applicable ISC at origination in the first position of the field, and the code for the applicable ISC at termination in the second position of the field. For example, 'B C' indicates that the TOFC movement started on ISC 20 and terminated on ISC 22.</p> <p><b>Note:</b> Three blanks in this field indicates the movement is not intermodal in nature. 'Unknown' ISCs are indicated by 'X'<sup>1</sup>.</p>

**Table 4-3. Revised Intermodal Service Plan Code Reporting**

Intermodal Service Code	Unit Owner	Service Provided by Carrier	Determination of Charges	STB Alternate Coding
15	Motor/Rail	R-R, Ramp to Ramp	Agreed between Trucker & Rail	<b>A</b>
20	Rail	T-R-T, Door to Door	Truck Competitive Rates	<b>B</b>
22	Rail	T-R, Door to Destination Ramp	Truck Competitive Rates	<b>C</b>
25	Rail	R-R, Ramp to Ramp	Special Mode of Code 20 Rates	<b>D</b>
27	Rail	R-T, Origin Ramp to Door	Truck Competitive Rates	<b>E</b>
40	Steamship/Stack Operator	T-R-T, Door to Door	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>F</b>
42	Steamship/Stack Operator	T-R, Door to Destination Ramp	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>G</b>
45	Steamship/Stack Operator	R-R, Ramp to Ramp	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>H</b>

Intermodal Service Code	Unit Owner	Service Provided by Carrier	Determination of Charges	STB Alternate Coding
47	Steamship/ Stack Operator	R-T, Origin Ramp to Door	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>I</b>

Field	Description
<b>9</b>	<p><b>Number of TOFC/COFCs</b> (4-digit numeric)</p> <p>The total number of TOFC/COFC units on the sample waybill<sup>1</sup>.</p>
<b>10</b>	<p><b>Trailer or Container Initials</b> (4-character alpha)</p> <p>The ownership of the trailer/container on flat car must be identified as recorded in the AAR/Railinc MARK file. If the waybill covers a multiple TOFC/COFC unit movement, the initials of the first trailer/container are entered<sup>1</sup>.</p>
<b>11</b>	<p><b>Trailer or Container Number</b> (6-digit numeric)</p> <p>The trailer/container number is assigned by the owner and, when combined with the owner's trailer/container initials, uniquely identifies the trailer/container used in the move. If the waybill covers a multiple TOFC/COFC unit movement, the number of the first trailer/container is entered<sup>1</sup>.</p>
<b>12</b>	<p><b>Commodity Code (STCC-HAZMAT)</b> (7-digit numeric)</p> <p>The Standard Transportation Commodity Code (STCC) identifies the product designation for the commodity being transported. For hazardous materials only, the 49 series HAZMAT Code is used in lieu of the regular STCC. STCC 48 (hazardous waste) is part of the regular STCC code. The 50 series STCC is used for bulk commodities transported in box cars<sup>1</sup>.</p>

<b>Field</b>	<b>Description</b>
<b>13</b>	<p><b>Billed Weight (CWT)</b> (9-digit numeric)</p> <p>The total billed weight (in hundredweight) is the weight of the commodity being transported<sup>1</sup>.</p>
<b>14</b>	<p><b>Actual Weight of Lading (CWT)</b> (9-digit numeric)</p> <p>The total actual weight of lading (in hundredweight), if provided, is recorded for the commodity being transported<sup>1</sup>.</p>
<b>15</b>	<p><b>Freight Revenue (\$)</b> (9-digit numeric)</p> <p>The total freight line-haul revenue, from origin to destination, is shown in dollars<sup>1</sup>.</p>
<b>16</b>	<p><b>Transit Charges (\$)</b> (9-digit numeric)</p> <p>Transit charges, where applicable, shown in dollars<sup>1</sup>.</p>
<b>17</b>	<p><b>Miscellaneous Charges (\$)</b> (9-digit numeric)</p> <p>The total of all miscellaneous charges, excluding transit and freight revenue charges, shown in dollars<sup>1</sup>.</p>
<b>18</b>	<p><b>Interstate/Intrastate Code (inferred)</b> (1-digit numeric)</p> <p>Normally, an Intrastate routing is inferred if the origin and destination states are the same. However, an Interstate routing is inferred for routings where the origin and destination stations are within a state but the customary routing exits and re-enters the state. Interstate movements should also include import, export, ex-lake and lake cargo movements.</p> <ul style="list-style-type: none"> <li>(1) Interstate</li> <li>(2) Intrastate</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>19</b>	<p><b>Transit Code</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not a transit movement</li> <li>(1) Transit - indicates that the shipment is the outbound movement from a transit point, where some service has been performed, to the destination point (which can be another transit point).</li> <li>(9) Unknown<sup>1</sup></li> </ul>

<b>Field</b>	<b>Description</b>
<b>20</b>	<p><b>All Rail/Intermodal Code</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(1) All Rail</li> <li>(2) Intermodal - a continuous movement involving at least one railroad and another mode.</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>21</b>	<p><b>Type of Move (inferred)</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Neither import nor export</li> <li>(1) Imported commodity</li> <li>(2) Exported commodity</li> <li>(3) Commodity imported and exported, e.g., land bridge traffic</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>22</b>	<p><b>Type of Move Via Water (inferred)</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not a water movement</li> <li>(1) Ex-Lake (from Great Lakes to reporting railroad)</li> <li>(2) Lake Cargo (Rail to Great Lakes)</li> <li>(3) Intercoastal - a continuous movement by U.S. rail which is part of an Atlantic Ocean (or Gulf) and Pacific Ocean movement, in either direction.</li> <li>(4) Coastwise - a continuous movement involving rail at either end of a coastwise movement between ports on the East Coast (including Gulf) or between ports on the West Coast.</li> <li>(5) Inland Waterways - a rail movement in combination with a barge movement on rivers and canals (other than the Great Lakes) that is not considered a part of the rail movement, e.g., rail car ferry.</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>23</b>	<p><b>Substituted Truck-for-Rail Service</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not substituted truck-for-rail service</li> <li>(1) Study movement involves substituted truck-for-rail service (for example, a rail carrier may be authorized by the STB to institute truck for rail service when rail service is abandoned or a track is closed for various reasons).</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>24</b>	<p><b>Shortline Miles</b> (4-digit numeric)</p> <p>Shortline miles comprise the shortest rail route over which carload traffic can be moved without transfer of lading. For a complete explanation, see Docket No. 28300<sup>6</sup>.</p>

Field	Description																																				
25	<p><b>Rebill Code (MRI and Hardcopy)</b> (1-digit numeric)</p> <p>(0) Local Shipment  (1) Originated – Delivered  (2) Received – Delivered  (3) Received – Terminated</p>

(8)	Hardcopy	26 or more	1 of 5 <sup>1</sup> or 6																																		
27	<p><b>Subsample Code Number</b> (1-digit numeric)</p> <p>For MRI waybills, this coding (1, 2, 3, or 4) identifies the individual subsamples obtained under the computerized sampling procedure. This field is initialized to a blank for Hardcopy (FTP) waybills, but a replicate subsample code is added during completion of the master file, using the following formula:</p> $\text{Code} = \text{Serial Number} - ((\text{Serial Number} / 4) * 4) + 1 \text{ truncated integer}$ <p>These subsample code numbers are used in a statistical fashion to estimate the standard deviation, or accuracy, of any level for the particular sample<sup>5</sup>.</p>																																				

Field	Description
28	<p><b>Intermodal Equipment Flag</b> (1-digit numeric)</p> <p>(0) TOFC/COFC movement and non 'Road Railer' movement</p> <p>(1) "Might be TOFC/COFC" movement, where the following three criteria have been met:</p> <ul style="list-style-type: none"> <li>a. The AAR Equipment Type Code is either 'P', 'Q' or 'S'.</li> <li>b. The billed weight falls between either of these two weight ranges: 17-23 tons per car, or 34-46 tons per car.</li> <li>c. All traditional TOFC/COFC fields are absent (i.e., the TOFC/COFC plan is ' ', the number of TOFC/COFC units is zero, the TOFC/COFC unit initial is blank, and the TOFC/COFC unit number is zero or blank).</li> </ul> <p>(2) "Road Railer" movement, the car is a special Bi-modal Highway/rail vehicle, commonly referred to as a 'Road Railer' van. Movement may be reported as either TOFC/COFC or as not a TOFC/COFC.</p> <p>(3) TOFC/COFC movement (not a 'Road Railer' movement)<sup>1</sup>.</p>
29	<p><b>Calculated Rate Flag</b> (1-digit numeric)</p> <p>(0) Not a calculated rate.</p> <p>(1) The freight revenue figure is a calculated number (which has been derived from existing tariffs at the three-digit STCC level) employed to protect confidential contract rate information<sup>1</sup>.</p> <p><b>Note:</b> This field is only used by the STB for internal analysis and does not appear on the completed Master tape retained by the contractor (AAR/Railinc).</p>
30	<p><b>Waybill Identifier for Retrieval (MRI only)</b> (25-character alpha-numeric)</p> <p>The waybill identifier field is a set of codes or numbers, devised by the reporting railroad, meant to aid the reporting railroad in identifying and retrieving a copy of the study waybill, as required, for error checks or for an STB special study.</p> <p><b>Note:</b> This item appears on MRI records only<sup>1</sup>.</p>
31	<p><b>Reporting Railroad Rule 260 Accounting Code</b> (3-digit numeric)</p> <p>The reporting railroad's R260 Accounting Code must be identified. The reporting railroad's code might differ from the terminating railroad's code as shown in element 33 since the reporting railroad might be reporting for its subsidiary or for other railroads under interline settlement agreements<sup>1</sup>.</p>

## 900-Byte File Record Data Element Descriptions (Routing items 32–52)

The routing is reported by using alphabetic codes for interchanges (junctions) and numerical codes for railroads from the Freight Mandatory Rule 260, as published by the Association of American Railroads. The origin FSAC (Freight Station Accounting Code) must be the code for the originating railroad's actual origin station (not billing station); the termination FSAC must be the terminating railroad's code for the actual termination station (not billing station). A single-line movement requires the entry of the one railroad's code for the origin FSAC and the destination FSAC. A two carrier move requires the origin railroad code (field 33) for the origin FSAC (field 32), the alpha code for the interchange in field 34, and the terminating railroad code for the termination FSAC (field 52).

Field	Description
32	<p><b>Origin FSAC</b> (5-digit numeric)</p> <p>The Freight Station Accounting Code (FSAC) numeric designation of the origin station<sup>1</sup>.</p>
33	<p><b>Origin Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the origin railroad<sup>1</sup>.</p>
34	<p><b>Interchange #1 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the first interchange station. Traffic was either transferred to the terminating carrier or the first bridge railroad<sup>1</sup>.</p>
35	<p><b>First Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the first bridge railroad.</p> <p><b>Note:</b> By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
36	<p><b>Interchange #2 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the second interchange station. Traffic was either transferred to the terminating carrier or the second bridge railroad<sup>1</sup>.</p>
37	<p><b>Second Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the second bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
38	<p><b>Interchange #3 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the third interchange station. Traffic was either transferred to the terminating carrier or the third bridge railroad<sup>1</sup>.</p>

Field	Description
39	<p><b>Third Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the third bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
40	<p><b>Interchange #4 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the fourth interchange station. Traffic was either transferred to the terminating carrier or the fourth bridge railroad<sup>1</sup>.</p>
41	<p><b>Fourth Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the fourth bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
42	<p><b>Interchange #5 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the fifth interchange station. Traffic was either transferred to the terminating carrier or the fifth bridge railroad<sup>1</sup>.</p>
43	<p><b>Fifth Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the fifth bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
44	<p><b>Interchange #6 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the sixth interchange station. Traffic was either transferred to the terminating carrier or the sixth bridge railroad<sup>1</sup>.</p>
45	<p><b>Sixth Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the sixth bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
46	<p><b>Interchange #7 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the seventh interchange station. Traffic was either transferred to the terminating carrier or the seventh bridge railroad<sup>1</sup>.</p>

Field	Description
47	<p><b>Seventh Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the seventh bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
48	<p><b>Interchange #8 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the eighth interchange station. Traffic was either transferred to the terminating carrier or the eighth bridge railroad<sup>1</sup>.</p>
49	<p><b>Eighth Bridge Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the eighth bridge railroad. Note: By definition, a bridge railroad cannot have originated or terminated the traffic movement<sup>1</sup>.</p>
50	<p><b>Interchange #9 Rule 260</b> (5-character alpha)</p> <p>The Accounting Rule 260 alpha code for the ninth interchange station. Traffic was then transferred to the terminating carrier<sup>1</sup>.</p>
51	<p><b>Termination Railroad</b> (3-digit numeric)</p> <p>The Accounting Rule 260 numeric code for the termination railroad<sup>1</sup>.</p>
52	<p><b>Termination FSAC</b> (5-digit numeric)</p> <p>The Freight Station Accounting Code numeric designation of the termination station<sup>1</sup>.</p>
53	<p><b>Population Count</b> (8-digit numeric)</p> <p>The size of a stratum's population, from which the sample was selected<sup>1 or 6</sup>.</p>
54	<p><b>Stratum Count</b> (6-digit numeric)</p> <p>The number of waybills (regardless of waybill year) that were chosen from a stratum's population<sup>1 or 6</sup>.</p>
55	<p>55. <b>Reporting Period Length</b> (1-digit numeric)</p> <p>(1) Monthly</p> <p>(2) Quarterly<sup>5</sup></p>

<b>Field</b>	<b>Description</b>
<b>56</b>	<b>Car Owner's Mark</b> (4-character alpha) The Umler Uniform Alphabetic Code for railroad owning car, or assigned reporting mark of private car company owning car as recorded in the AAR/Railinc MARK file.
<b>57</b>	<b>Car Lessee's Mark</b> (4-character alpha) The Umler Uniform Alphabetic Code for railroad owning car, or assigned reporting mark of private car company owning car as recorded in the AAR/Railinc MARK file.
<b>58</b>	<b>Car Capacity</b> (5-digit numeric) Cubic foot capacity of car (for all equipment types except flat) <sup>2</sup> .
<b>59</b>	<b>Nominal Capacity</b> (3-digit numeric) Expired
<b>60</b>	<b>Tare Weight of Car</b> (4-digit numeric) The actual light weight (not an average), in hundredweight, for each car <sup>2</sup> .
<b>61</b>	<b>Outside Length</b> (5-digit numeric) Distance between pulling faces of the couplers in normal position. The first three-digits represent feet. The last 2 digits represent inches, rounded up to the next inch in the case of a fraction. Example: 5 1/4" = 6" <sup>2</sup> .
<b>62</b>	<b>Outside Width</b> (4-digit numeric) Measurement of outside width of car, including attachments projecting to greatest extent. The first two digits represent feet. The last two digits represent inches, rounded up to next inch in the case of a fraction <sup>2</sup> .
<b>63</b>	<b>Outside Height</b> (4-digit numeric) Measurement from top of rail to top of eaves at side of car. The first two digits represent feet. The last two digits represent inches, rounded up to the next inch in the case of a fraction <sup>2</sup> .
<b>64</b>	<b>Extreme Outside Height</b> (4-digit numeric) Measurement from top of rail to location where extreme height occurs. The first two digits represent feet. The last two digits represent inches, rounded up to the next inch in the case of a fraction <sup>2</sup> .

Field	Description
-------	-------------

- 65**      **Type of Wheel Bearings and Brakes** (1-character alpha)
- (A) Plain bearings and composition brake shoes
  - (B) Roller bearings and composition brake shoes
  - (C) Plain bearings and cast iron brake shoes
  - (D) Roller bearings and cast iron brake shoes
  - (E) Roller bearings, composition brake shoes and constant contact side bearings
  - (F) Roller bearings, cast iron brake shoes and constant contact side bearings
  - (G) Roller bearings, composition brake shoes, and empty/load brake system
  - (H) Roller bearings, composition brake shoes, constant contact side bearings, and empty/load brake system
  - (I) Roller bearings, cast iron shoes and empty/load brake system
  - (J) Roller bearings, cast iron shoes, constant contact side bearings, and empty/load brake system
  - (K) Roller bearings, composition brake shoes and designed for high speed train operations
  - (L) Roller bearings, composition brake shoes, empty/load brake system and designed for high speed train operations<sup>2</sup>

**66**      **Number of Axles** (1-character alphanumeric):

Code	Axles	Code	Axles	Code	Axles
(2)	2	(F)	16	(Q)	27
(4)	4	(G)	17	(R)	28
(6)	6	(H)	18	(S)	29
(8)	8	(I)	19	(T)	30
(9)	9	(J)	20	(U)	31
(0)	10	(K)	21	(V)	32
(A)	11	(L)	22	(W)	33
(B)	12	(M)	23	(X)	34
(C)	13	(N)	24	(Y)	35
(D)	14	(O)	25(Z)		36 or more <sup>2</sup>
(E)	15	(P)	26		

**67**      **Draft Gear** (2-digit numeric)

This element identifies draft gear and coupler types.

**68**      **Number of Articulated Units** (1-digit numeric)

An articulated car consists of two or more cars permanently coupled together in such a manner that they cannot be separated for operations in interchange service as individual cars. Such cars will be operated under one reporting mark and one reporting number. The reported code indicates the number of units permanently attached. The minimum is 2, while 9 indicates nine or more units<sup>2</sup>.

**Note:** '0' indicates that the car is not articulated.

<b>Field</b>	<b>Description</b>
<b>69</b>	<b>Pool Code Number</b> (7-digit numeric) Numeric code indicating name and location of a specific shipper or assignment type in accordance with the provisions of Car Service Rule 16C for equipment types covered by Circulars CSD 145, CSD 435 <sup>2</sup> .
<b>70</b>	<b>AAR Equipment Type Code</b> (4-character alphanumeric) Alphanumeric code giving a general physical description of the type of car <sup>2</sup> .
<b>71</b>	<b>Mechanical Designation</b> (4-character alpha) Mechanical designation is dependent on AAR equipment type <sup>2</sup> .
<b>72</b>	<b>Licensing State (TOFC)</b> (2-character alpha) An alphabetic code representing the Standard Alphabetic Abbreviation for state, province or foreign country. This is applicable only to rail-owned TOFC/COFC equipment <sup>2</sup> .
<b>73</b>	<b>Total Weight on Rail</b> (3-digit numeric) The actual total weight allowable on rail based on journal size, wheel size, or car construction and wheel truck (assuming 4 axles per car), listed in thousands of pounds <sup>2</sup> .
<b>74</b>	<b>Origin SPLC</b> (6-digit numeric) The Standard Point Location Code of the origin station <sup>3</sup> .
<b>75</b>	<b>Destination SPLC</b> (6-digit numeric) The Standard Point Location Code of the destination station <sup>3</sup> .
<b>76</b>	<b>Commodity Code (non-HAZMAT STCC)</b> (7-digit numeric) The commodity code, as reported in item 12, with hazardous codes (49xxxxx) and bulk codes (50xxxxx) translated to the actual product commodity code <sup>8</sup> .
<b>77</b>	<b>Origin Railroad Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the origin railroad <sup>3</sup> .
<b>78</b>	<b>First Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the first bridge railroad <sup>3</sup> .

<b>Field</b>	<b>Description</b>
<b>79</b>	<b>Second Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the second bridge railroad <sup>3</sup> .
<b>80</b>	<b>Third Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the third bridge railroad <sup>3</sup> .
<b>81</b>	<b>Fourth Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the fourth bridge railroad <sup>3</sup> .
<b>82</b>	<b>Fifth Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the fifth bridge railroad <sup>3</sup> .
<b>83</b>	<b>Sixth Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the sixth bridge railroad <sup>3</sup> .
<b>84</b>	<b>Seventh Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the seventh bridge railroad <sup>3</sup> . This field has been removed from the 900-byte file layout.
<b>85</b>	<b>Eighth Interchange RR Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the eighth bridge railroad. <sup>3</sup> This field has been removed from the 900-byte file layout.
<b>86</b>	<b>Termination Railroad Alpha</b> (4-character alpha) The Accounting Rule 260 alpha abbreviation for the termination railroad <sup>3</sup> .
<b>87</b>	<b>Junction Frequency</b> (1-digit numeric) This figure represents the total number of junctions (between railroads) in the route <sup>6</sup> .
<b>88</b>	<b>Theoretical Expansion Factor</b> (3-digit numeric) The theoretical expansion factor is the inverse of the sampling rate, as indicated by the stratum identification in item 26, and is used to expand the car, ton, trailer/container and revenue statistics to 100% levels <sup>6</sup> .

Field	Description
89	<p><b>Routing Error Flag</b> (1-character alpha)</p> <p>This field contains either a 'T' (true) or an 'F' (false). An 'F' indicates that Railinc was not able to sufficiently identify the actual origin or termination point of the route, so as to calculate a carrying distance for one or more railroads in the route. An 'F' in this field will be accompanied by a '99999' in the total distance field (and one or more railroad distance fields), and '99999' in all of the split revenue fields<sup>6</sup>.</p>
90	<p><b>STB Car Type</b> (2-digit numeric)</p> <p>The STB car type is inferred from the AAR Equipment Type, as described in item 70, and corresponds to the line number on STB Form 710 for type of car<sup>4</sup>. (See <a href="#">Table 4-9. STB Car Types</a>)<sup>4</sup></p>
92	<p><b>AAR/Railinc Error Codes</b> (2-digit numeric, repeated 3 times)</p> <p>Up to 3 two-digit error codes are appended to the end of each waybill record. Refer to the following sub-section, entitled "Waybill Error Codes and Messages," for specific error code definitions<sup>5</sup>.</p>
93	<p><b>Car Ownership Category</b> (1-character alpha)</p> <p>Alpha/numeric code which identifies the owner of the car:</p> <ul style="list-style-type: none"> <li>(R) Railroad owned;</li> <li>(P) Privately Owned;</li> <li>(T) Trailer Train<sup>2</sup></li> </ul>
94	<p><b>AAR Trailer/Container Equipment Type Code</b> (4-character alphanumeric)</p> <p>Alpha/numeric code giving a general physical description of the type of intermodal equipment<sup>2</sup>.</p> <p><b>Note:</b> If Trailer/Container unit was not found in Umler it has been given the most common trailer or container type for its STC Code.</p>
95	<p><b>Deregulation Date</b> (8-digit numeric)</p> <p>The exact date (ccyymmdd) of the commodity's deregulation where, cc = century, yy = year, mm = month, dd = day<sup>8</sup>.</p> <p><b>Note:</b> Use of this flag will only be determined by commodity, not equipment type.</p>

Field	Description
96	<p><b>Deregulation Flag</b> (1-character alpha)</p> <p>Identifies commodity movements which were exempt from regulation under Ex Parte 346. This flag is coded as '1' if the commodity was deregulated at any time during the waybill processing year. If the commodity was not deregulated during the waybill processing year, the field is coded as '2'<sup>8</sup>.</p> <p><b>Note:</b> Use of this flag will only be determined by commodity, not equipment type.</p>
97	<p><b>Service Type</b> (1-character numeric)</p> <p>This flag is used by Railinc for routing and calculating miles for each record. Different routing formulas are used for different service types, yielding mileage that more accurately reflects railroad operating patterns.</p> <ol style="list-style-type: none"> <li>(1) All other traffic not included in service types 2, 3 or 4.</li> <li>(2) Intermodal and finished automobiles, where the TOFC plan is non-zero or the AAR equipment type code begins with P, Q, S, or Z.</li> <li>(3) Coal, coke, iron ore and bulk grain, where service type is not 2, and the 2-digit STCC is 11, or the 5-digit STCC is 29913-29914, or the 3-digit STCC is 101, or the 5-digit STCC is 01130-01139 and the AAR equipment type code begins with C (designating a covered hopper).</li> <li>(4) Auto Racks/Finished Automobiles where AAR equipment type is V<sup>6</sup>.</li> </ol>
98	<p><b>Expanded Carloads</b> (6-digit numeric)</p> <p>The number of carloads (item 5) multiplied by the expansion factor (item 88)<sup>6</sup>.</p>
99	<p><b>Billed Weight in Tons</b> (7-digit numeric)</p> <p>The billed weight (item 13) calculated in tons<sup>6</sup>.</p>
100	<p><b>Expanded Tons</b> (8-digit numeric)</p> <p>The billed weight in tons (item 99) multiplied by the expansion factor (item 88)<sup>6</sup>.</p>
101	<p><b>Expanded Trailer/Container Count</b> (6-digit numeric)</p> <p>The number of TOFC/COFC units (item 9) multiplied by the expansion factor (item 88)<sup>6</sup>.</p>

<b>Field</b>	<b>Description</b>
<b>102</b>	<p><b>Expanded Total Revenue</b> (10-digit numeric)</p> <p>The total freight revenue (item 15) multiplied by the expansion factor (item 88). Revenue splits are calculated by Railinc in the following manner: the waybill's expanded freight revenue figure is divided by the number of 100 mile blocks traveled by each railroad in the route. The origin railroad is apportioned revenue for an additional block, to allow for pick-up and switching expenses. Likewise, the termination railroad is credited with revenue for an additional block, to allow for delivery expenses<sup>6</sup>.</p>
<b>103</b>	<p><b>Origin Railroad Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the origin railroad<sup>6</sup>.</p>
<b>104</b>	<p><b>First Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the second rail carrier in the route<sup>6</sup>.</p>
<b>105</b>	<p><b>Second Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the third rail carrier in the route<sup>6</sup>.</p>
<b>106</b>	<p><b>Third Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the fourth rail carrier in the route<sup>6</sup>.</p>
<b>107</b>	<p><b>Fourth Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the fifth rail carrier in the route<sup>6</sup>.</p>
<b>108</b>	<p><b>Fifth Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the sixth rail carrier in the route<sup>6</sup>.</p>
<b>109</b>	<p><b>Sixth Interchange RR Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the seventh rail carrier in the route<sup>6</sup>.</p>

Field	Description
112	<p><b>Termination Railroad Split Revenue</b> (10-digit numeric)</p> <p>That portion of the total expanded revenue (item 102) assigned to the termination rail carrier in the route<sup>6</sup>.</p>
113	<p><b>First Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the first carrier in the route, as calculated by Railinc, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the first carrier, this field will contain the number '99999', as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
114	<p><b>Second Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the second carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the second carrier, this field will contain the number '99999', as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
115	<p><b>Third Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the third carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the third carrier, this field will contain the number '99999', as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
116	<p><b>Fourth Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the fourth carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the third carrier, this field will contain the number '99999', as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
117	<p><b>Fifth Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the fifth carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the third carrier, this field will contain the number '99999', as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>

Field	Description
118	<p><b>Sixth Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the sixth carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the third carrier, this field will contain the number ‘99999’, as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
119	<p><b>Seventh Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the seventh carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the third carrier, this field will contain the number ‘99999’, as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
122	<p><b>Termination Railroad Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by the termination carrier in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for the termination carrier, this field will contain the number ‘99999’, as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
123	<p><b>Total Distance</b> (5-digit numeric, implied nnnn.n)</p> <p>The actual distance traveled by all carriers in the route, as calculated by RAILINC, using the Princeton Transportation Network Model. This field will contain the arithmetic sum of the previous ten fields. If, due to deficiencies in the route information, RAILINC was unable to calculate a distance for one or more carriers in the route, this field will contain the number ‘99999’, as indicated by the Routing Error Flag (item 89)<sup>6</sup>.</p>
124	<p><b>Origin State Alpha</b> (2-character alpha)</p> <p>The two-character abbreviation for the state in which the reported waybill movement originated<sup>3</sup>.</p>
125	<p><b>First Junction State Alpha</b> (2-character alpha)</p> <p>The two-character abbreviation for the state in which the reported waybill’s first junction interchange station is located<sup>3</sup>.</p>
126	<p><b>Second Junction State Alpha</b> (2-character alpha)</p> <p>The two-character abbreviation for the state in which the reported waybill’s second junction interchange station is located<sup>3</sup>.</p>

<b>Field</b>	<b>Description</b>
<b>127</b>	<b>Third Junction State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill's third junction interchange station is located <sup>3</sup> .
<b>128</b>	<b>Fourth Junction State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill's fourth junction interchange station is located <sup>3</sup> .
<b>129</b>	<b>Fifth Junction State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill's fifth junction interchange station is located <sup>3</sup> .
<b>130</b>	<b>Sixth Junction State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill's sixth junction interchange station is located <sup>3</sup> .
<b>131</b>	<b>Seventh Junction State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill's seventh junction interchange station is located <sup>3</sup> .
<b>134</b>	<b>Termination State Alpha</b> (2-character alpha) The two-character abbreviation for the state in which the reported waybill movement terminated <sup>3</sup> .
<b>135</b>	<b>Origin BEA Area</b> (3-digit numeric) The Business Economic Area code for the reported waybill movement's origin location. (See <a href="#">Table 4-4</a> and <a href="#">Table 4-5</a> for "Department of Commerce - Bureau of Economic Analysis, Business Economic Area Codes") <sup>7</sup>
<b>136</b>	<b>Termination BEA Area</b> (3-digit numeric) The Business Economic Area code for the reported waybill movement's termination location. (See <a href="#">Table 4-4</a> and <a href="#">Table 4-5</a> for "Department of Commerce - Bureau of Economic Analysis, Business Economic Area Codes") <sup>7</sup>
<b>137</b>	<b>Origin FIPS Code</b> (5-digit numeric) The Federal Information Processing Standard code for the county in which the reported waybill movement originated <sup>7</sup> .

Field	Description
138	<p><b>Termination FIPS Code</b> (5-digit numeric)</p> <p>The Federal Information Processing Standard code for the county in which the reported waybill movement terminated<sup>7</sup>.</p>
139	<p><b>Origin Freight Rate Area</b> (2-digit numeric)</p> <p>The freight rate area, as defined by the STB (and imputed from the Standard Point Location Code (SPLC)), in which the reported waybill movement originated. The freight rate areas are defined below<sup>4</sup>:</p> <ol style="list-style-type: none"> <li data-bbox="391 625 1425 1024">(1) Kewaunee, Wisconsin, Sheboygan, Wisconsin; stations on the North Western Railway between Sheboygan and Milwaukee; stations on the Milwaukee Railway from Sheboygan to Milwaukee, thence Wisconsin and Southern to Rugby Junction, Wisconsin; stations on the Soo Line from Rugby Junction to Duplainville, Wisconsin; stations on the Milwaukee Railway from Duplainville to Madison, Wisconsin; stations on the North Western Railway from Madison, Wisconsin, through Montfort Junction, Wisconsin, to Benton, Wisconsin; Mississippi River crossings in Iowa; all stations in Wisconsin south and east of the border of Official Territory; stations in Indiana in the Chicago Switching district; and all stations in Illinois except east bank Mississippi River crossings south of the Missouri/Iowa state line and except north bank Ohio River crossings.</li> <li data-bbox="391 1045 1425 1507">(2) Ohio River crossings on both banks of the Ohio River between Cairo, Illinois, and Cincinnati, Ohio, inclusive; stations on the C&amp;O Railway between Cincinnati, Ohio, and Kenova, West Virginia; stations on the Norfolk and Western between Kenova and the intersection with the Virginian Railway west of Roanoke, Virginia; stations on the Virginian Railway from the foregoing point of intersection of Suffolk, Virginia, stations on the Norfolk and Western between Suffolk and Norfolk, Virginia; stations in Virginia north of the east-west line across Virginia, just described, except those on the "Eastern Shore" but including Washington, D.C.; stations on the branch lines of the Norfolk and Western extending south of its main line (except those stations between Abingdon, Virginia, and West Jefferson, North Carolina, those between Roanoke, Virginia, and Winston-Salem, North Carolina, and those between Brookneal, Virginia, and Durham, North Carolina); and stations on the C&amp;O Railway in Kentucky.</li> <li data-bbox="391 1528 1425 1591">(3) Mississippi River crossings on both banks of the river between the Missouri/Iowa state line and Cairo, Illinois.</li> <li data-bbox="391 1612 1425 1644">(4) All points in Official Territory other than those included in 1, 2, and 3 above.</li> <li data-bbox="391 1665 1425 1696">(5) Mississippi River crossings on both banks of the river south of Cairo, Illinois.</li> <li data-bbox="391 1717 1425 1749">(6) All points in Southern Territory other than those included in 2 and 5 above.</li> </ol>

Field	Description

<b>156</b>	<p><b>State Through Flags</b> (1-digit numeric, repeated 52 times)</p> <p>A '1' indicates that the reported waybill route passes through the particular state<sup>6</sup>.</p>
<b>157</b>	<p><b>International Harmonized Code</b> (12-character alpha)</p> <p>The International Harmonized Code is a twelve-digit code in the following format; XXXX.XX.XXXX. It contains a description derived from the conversion of the Harmonized Tariff Schedule of the <i>United States - Trade Policy Staff Committee, Office of the U.S. Trade Representative, Washington, D.C. 20506</i><sup>8</sup>.</p> <p><b>Note:</b> 'XXXX.XX.XXXX' indicates no data is available.</p>

Field	Description
158	<p><b>Standard Industrial Classification</b> (4-character alpha)</p> <p>The Standard Industrial Classification (SIC) is a four-character code that contains the statistical classification standard underlying all establishment-based federal economic statistics classified by industry. <i>Standard Industrial Classification Manual 1978</i> - Executive Office of the President, Office of Management and Budget<sup>8</sup>.</p> <p><b>Note:</b> ‘XXXX’ indicates no data is available.</p>
159	<p><b>International Standard Industrial Classification</b> (4-character alpha)</p> <p>The International Standard Industrial Classification is a four-character code containing the statistical classification standard underlying all establishment-based international economic statistics classified by industry. <i>International Standard Industrial Classification</i> - Executive Office of the President, Office of Management and Budget<sup>8</sup>.</p> <p><b>Note:</b> ‘XXXX’ indicates no data is available.</p>
160	<p><b>Dominion of Canada Code</b> (3-character alpha)</p> <p>The Dominion of Canada Code is a three-character code and is used in the monthly Canadian "Railway Transport-Revenue Freight Traffic" publication and in Schedule 35 of the Canadian "Annual Railway Transport" report<sup>8</sup>.</p> <p><b>Note:</b> ‘XXX’ indicates no data is available.</p>
161	<p><b>CS54 Group Code</b> (2-character alpha)</p> <p>The CS54 Group Code is a two-character code and is based on commodity classifications used in the weekly car loading report form CS54. (See <a href="#">CS54 Group Codes</a> “CS54 Group Codes”)<sup>8</sup></p>
162	<p><b>Origin Freight Station Type</b> (1-character alpha; repeated up to 4 times)</p> <p>The type of station, where:</p> <ul style="list-style-type: none"> <li>(R ) Railroad Freight Tariff Location</li> <li>(M) Motor Freight Tariff Location</li> <li>(I) Interchange point</li> <li>(H) Haulage point</li> <li>(J) Junction Settlement point</li> <li>(W) Switching point</li> <li>(O) Railroad Operating Location<sup>3</sup></li> </ul> <p><b>Note:</b> ‘X’ indicates no data is available.</p>

Field	Description
163	<p><b>Destination Freight Station Type</b> (1-character alpha; repeated up to 4 times)</p> <p>The type of station, where:</p> <ul style="list-style-type: none"> <li>(R ) Railroad Freight Tariff Location</li> <li>(M) Motor Freight Tariff Location</li> <li>(I) Interchange point</li> <li>(H) Haulage point</li> <li>(J) Junction Settlement point</li> <li>(W) Switching point</li> <li>(O) Railroad Operating Location<sup>3</sup></li> </ul> <p><b>Note:</b> 'X' indicates no data is available.</p>
164	<p><b>Origin Freight Station Rating ZIP</b> (9-character numeric)</p> <p>The ZIP Code used to represent the geographic area covered for rating purposes. Normally, only a three, four or five-digit ZIP Code is provided<sup>3</sup>.</p>
165	<p><b>Destination Freight Station Rating ZIP</b> (9-character numeric)</p> <p>The ZIP Code used to represent the geographic area covered for rating purposes. Normally, only a three, four or five-digit ZIP Code is provided<sup>3</sup>.</p>
166	<p><b>Origin Rate Base SPLC</b> (9-digit numeric)</p> <p>The Standard Point Location Code (SPLC) of the rate base. The SPLC data base, copyrighted by the National Motor Freight Traffic Association (NMFTA), is designed to provide each point originating freight and each point receiving freight with a unique code number so constructed as to identify the point as a geographic location. SPL Codes are based on a six-digit system of nesting recognized entities and numbering them in a standard geographic pattern. The nesting system is STATE - COUNTY - CITY (POINT), using two digits to identify each. Although not currently in use by the rail industry, an additional three-digit code may be added to each six-digit SPLC to further identify specific rate base locations<sup>3</sup>.</p>
167	<p><b>Destination Rate Base SPLC</b> (9-digit numeric)</p> <p>The Standard Point Location Code (SPLC) of the rate base. The SPLC data base, copyrighted by the National Motor Freight Traffic Association (NMFTA), is designed to provide each point originating freight and each point receiving freight with a unique code number so constructed as to identify the point as a geographic location. SPL Codes are based on a six-digit system of nesting recognized entities and numbering them in a standard geographic pattern. The nesting system is STATE - COUNTY - CITY (POINT), using two digits to identify each. Although not currently in use by the rail industry, an additional three-digit code may be added to each six-digit SPLC to further identify specific rate base locations<sup>3</sup>.</p>

Field	Description
168	<p><b>Origin Switch Limit SPLC</b> (9-digit numeric)</p> <p>The Standard Point Location Code (SPLC) of the switch limit. The SPLC data base, copyrighted by the National Motor Freight Traffic Association (NMFTA), is designed to provide each point originating freight and each point receiving freight with a unique code number so constructed as to identify the point as a geographic location. SPL Codes are based on a six-digit system of nesting recognized entities and numbering them in a standard geographic pattern. The nesting system is STATE - COUNTY - CITY (POINT), using two digits to identify each. Although not currently in use by the rail industry, an additional three-digit code may be added to each six-digit SPLC to further identify specific rate base locations<sup>3</sup>.</p>
169	<p><b>Destination Switch Limit SPLC</b> (9-digit numeric)</p> <p>The Standard Point Location Code (SPLC) of the switch limit. The SPLC data base, copyrighted by the National Motor Freight Traffic Association (NMFTA), is designed to provide each point originating freight and each point receiving freight with a unique code number so constructed as to identify the point as a geographic location. SPL Codes are based on a six-digit system of nesting recognized entities and numbering them in a standard geographic pattern. The nesting system is STATE - COUNTY - CITY (POINT), using two digits to identify each. Although not currently in use by the rail industry, an additional three-digit code may be added to each six-digit SPLC to further identify specific rate base locations<sup>3</sup>.</p>
170	<p><b>Origin Customs Flag</b> (1-character alpha)</p> <p>Whether U.S. Customs will inspect cars and intermodal equipment requiring customs clearance at this station.</p> <p>(Y) Cars and trailers/containers can be inspected at this station.</p> <p>(N) Customs inspections are not made here<sup>3</sup>.</p> <p><b>Note:</b> "X" indicates no data is available.</p>
171	<p><b>Destination Customs Flag</b> (1-character alpha)</p> <p>Whether U.S. Customs will inspect cars and intermodal equipment requiring customs clearance at this station.</p> <p>(Y) Cars and trailers/containers can be inspected at this station.</p> <p>(N) Customs inspections are not made here<sup>3</sup>.</p> <p><b>Note:</b> "X" indicates no data is available.</p>

Field	Description
172	<p><b>Origin Grain Flag</b> (1-character alpha)</p> <p>Whether recognized grain inspection authorities inspect grain at this station.</p> <p>(Y) Grain can be inspected at this station.</p> <p>(N) Grain inspections are not made at this station<sup>3</sup>.</p> <p><b>Note:</b> “X” indicates no data is available.</p>
173	<p><b>Destination Grain Flag</b> (1-character alpha)</p> <p>Whether recognized grain inspection authorities inspect grain at this station.</p> <p>(Y) Grain can be inspected at this station.</p> <p>(N) Grain inspections are not made at this station<sup>3</sup>.</p> <p><b>Note:</b> “X” indicates no data is available.</p>
174	<p><b>Origin Automobile Ramp Facility Code</b> (1-character alpha)</p> <p>Whether automobiles can be physically loaded/unloaded from multilevel cars at this station.</p> <p>(N) No auto unloading facilities exist at the station</p> <p>(F) Fixed Ramp(s) are located at station</p> <p>(P) Portable Ramp(s) are located at station</p> <p>(T) Traversing</p> <p>(B) Both fixed and portable ramps</p> <p>(A) All types of ramps<sup>3</sup></p> <p><b>Note:</b> “X” indicates no data is available.</p>
175	<p><b>Destination Automobile Ramp Facility Code</b> (1-character alpha)</p> <p>Whether automobiles can be physically loaded/unloaded from multilevel cars at this station.</p> <p>(N) No auto unloading facilities exist at the station</p> <p>(F) Fixed Ramp(s) are located at station</p> <p>(P) Portable Ramp(s) are located at station</p> <p>(T) Traversing</p> <p>(B) Both fixed and portable ramps</p> <p>(A) All types of ramps<sup>3</sup></p> <p><b>Note:</b> “X” indicates no data is available.</p>

Field	Description
176	<p><b>Origin Intermodal Flag</b> (1-character alpha)</p> <p>Whether facilities exist to physically load/unload trailer/containers from rail cars at this station, where:</p> <ul style="list-style-type: none"> <li>(0) No intermodal loading/unloading facilities exist at the station</li> <li>(1) Circus type ramp</li> <li>(2) Overhead crane</li> <li>(3) Side lifter</li> <li>(5) Stack Train</li> <li>(C) Facility has been closed<sup>3</sup></li> </ul> <p><b>Note:</b> “X” indicates no data is available.</p>
177	<p><b>Destination Intermodal Flag</b> (1-character alpha)</p> <p>Whether facilities exist to physically load/unload trailer/containers from rail cars at this station, where:</p> <ul style="list-style-type: none"> <li>(0) No intermodal loading/unloading facilities exist at the station</li> <li>(1) Circus type ramp</li> <li>(2) Overhead crane</li> <li>(3) Side lifter</li> <li>(5) Stack Train</li> <li>(C) Facility has been closed<sup>3</sup></li> </ul> <p><b>Note:</b> “X” indicates no data is available.</p>
179	<p><b>Blank Space reserved for future changes</b> (22- characters)</p>
180	<p><b>Origin Census Region</b> (4-character alpha)</p> <p>(See <a href="#">Figure 4-1</a>, U.S. Census Regions.)<sup>9</sup></p>
181	<p><b>Termination Census Region</b> (4-character alpha)</p> <p>(See <a href="#">Figure 4-1</a>, U.S. Census Regions.)<sup>9</sup></p>
182	<p><b>Exact Expansion Factor</b> (7-digit numeric)</p> <p>The exact expansion factor is calculated for each waybill, according to the formula shown below, and is used to expand the car, ton, trailer/container and revenue statistics to 100% levels. The format of this factor is ‘nnn.nn’ with an implied decimal point<sup>4</sup>.</p> $\text{Factor} = (\text{Population count} / \text{Sample count})$

Field	Description
183	<p><b>Total Variable Cost</b> (8-digit numeric)</p> <p>The expanded variable cost for all railroads in the waybill computed using the Uniform Railroad Costing System (URCS). URCS produces an average variable costs for Class I railroads using railroad specific accounting and operating data. Costs for local and regional railroads use URCS regional data. Ex Parte 270 (Sub 4) multiple car and unit train cost reductions are applied to multiple car shipment costs to reflect economies of scale. The costs removed from multiple car shipments are apportioned back to single car traffic using railroad specific “make whole” values. URCS costs are computed by the Surface Transportation Board<sup>4</sup>.</p>
185	<p><b>Railroad 1 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the first rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
186	<p><b>Railroad 2 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the second rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
187	<p><b>Railroad 3 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the third rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
188	<p><b>Railroad 4 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the fourth rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
189	<p><b>Railroad 5 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the fifth rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
190	<p><b>Railroad 6 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the sixth rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>

Field	Description
191	<p><b>Railroad 7 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the seventh rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
192	<p><b>Railroad 8 Variable Cost</b> (8-digit numeric)</p> <p>The portion of the total variable cost (item 183) for the eighth rail carrier in the route. Includes multiple car and unit train cost reductions or a railroad specific, single car “make whole” cost, as appropriate<sup>4</sup>.</p>
193	<p><b>Transborder Flag</b> (1-digit numeric)</p> <p>STB requires railroads to report information on either the entire international movement or treat the US portion of the movement as terminating at or near the border. Near the border is defined as either the last station or interchange point in the US that is within approximately 10 miles of the border, or the first station or interchange point in Canada or Mexico.</p> <ul style="list-style-type: none"> <li>(0) Normal Transborder</li> <li>(1) Near the Border</li> <li>(2) Not a Transborder</li> </ul>
194	<p><b>Origin Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the origin railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>

Field	Description
195	<p><b>First Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the first bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>
196	<p><b>Second Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the second bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>
197	<p><b>Third Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the third bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>

Field	Description
198	<p><b>Fourth Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the fourth bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>
199	<p><b>Fifth Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the fifth bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>
200	<p><b>Sixth Interchange Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the sixth bridge railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p> <p>Routes on Canadian Pacific and Canadian National are split into US and Canada portions - CNUS/CPUS for US operations and CN/ CPRS for Canadian operations. The country codes for CNUS/CPUS will be “US” and CPRS/CN will be “CA”</p>

Field	Description
201	<p><b>Termination Railroad Country Code</b> (2-character alpha)</p> <p>Country code for the termination railroad.</p> <p>“US” = United States</p> <p>“CA” = Canada</p> <p>“MX” = Mexico</p>
202	<p><b>Fuel Surcharge</b> (9-digit numeric)</p> <p>Show any fuel surcharge in dollars for the study waybill. This field should not be masked.</p>

- 171 Anchorage, AK
- 172 Honolulu, HI

**Note:** Codes are assigned, beginning with 001 in northern Maine, continuing south to Florida, then north to the Great Lakes, and continuing in

a serpentine pattern to the West Coast. Except for the Western Oklahoma economic area (126), the Northern Michigan economic area (058), and the 17 economic areas mainly corresponding to CMSA's, each economic area is named for the metropolitan area or city that is the node of its largest CEA and that is usually, but not always, the largest metropolitan area or city in the economic area. The name of each economic area includes each State that contains counties in that economic area.

**Note:** The following “BEA” Codes were created by the AAR/RAILINC processing team in order to maintain uniformity in this data field. These Codes are NOT recognized by the Department of Commerce.

- 173 Newfoundland
- 174 Nova Scotia
- 175 Prince Edward Island
- 176 New Brunswick
- 177 Quebec
- 178 Ontario
- 179 Manitoba
- 180 Saskatchewan
- 181 Alberta
- 182 British Columbia
- 183 Yukon/Northwest Territories
- 184 Puerto Rico
- 185 Mexico

# 2017 Surface Transportation Board Public Use Waybill 247-Byte Record Data Element Descriptions

Table 4-7. 247-Byte STB Public Use Waybill Data Element Descriptions

Field	Description
1	<p><b>Waybill Date (Month, Day, Year)</b> (6-digit numeric)</p> <p>The waybill date is the date on which the originating railroad prepares the waybill<sup>1</sup>.</p>
2	<p><b>Accounting Period (Month, Year)</b> (4-digit numeric)</p> <p>The accounting period is the month and year during which the study waybill is entered into the railroad's revenue accounting system. This information is subsequently reflected in the net income statement of the company for the specified account month<sup>1</sup>.</p>
3	<p><b>Number of Carloads</b> (4-digit numeric)</p> <p>The total number of carloads on the sampled waybill<sup>1</sup>.</p>
4	<p><b>Car Ownership Code</b> (1-character alpha)</p> <p>(P) Privately-owned car (R) Railroad-owned car<sup>2</sup></p>
5	<p><b>AAR Equipment Type Code</b> (4-character alphanumeric)</p> <p>Alpha-numeric code giving a general physical description of the type of equipment<sup>2</sup>. (See Umler Field Descriptions, <a href="#">AAR Equipment Type</a>)</p>
6	<p><b>AAR Mechanical Designation</b> (4-character alpha)</p> <p>Mechanical designation is dependent on AAR equipment type<sup>2</sup>. (See Umler Data Specification Manual, <a href="#">Section IX</a>)</p>
7	<p><b>STB Car Type</b> (2-digit numeric)</p> <p>The STB car type is inferred from the AAR equipment type, as described in item 5, and corresponds to the line number on STB Form 710 for type of car<sup>4</sup>. (See <a href="#">Table 4-9. STB Car Types</a>)</p>

Field	Description
-------	-------------

**8 Intermodal (TOFC/COFC) Service Code** (3-character alphanumeric, space fill)

The code for the Intermodal Service Code (ISC) must be entered in the first position of the field. If possible, when different ISC's are used during the course of the sampled waybill movement, enter the code for the applicable ISC at termination in the first position of the field, and the code for the applicable ISC at origination in the second position of the field. For example, 'B C' indicates that the TOFC movement started on ISC 20 and terminated on ISC 22.

**Note:** Three blanks in this field will indicate the movement is not intermodal in nature. 'Unknown' ISCs are indicated by 'X'<sup>1</sup>.

**Table 4-8. Revised Intermodal Service Plan Code Reporting**

Intermodal Service Code	Unit Owner	Service Provided by Carrier	Determination of Charges	STB Alternate Coding
15	Motor/Rail	R-R, Ramp to Ramp	Agreed between Trucker & Rail	<b>A</b>
20	Rail	T-R-T, Door to Door	Truck Competitive Rates	<b>B</b>
22	Rail	T-R, Door to Destination Ramp	Truck Competitive Rates	<b>C</b>
25	Rail	R-R, Ramp to Ramp	Special Mode of Code 20 Rates	<b>D</b>
27	Rail	R-T, Origin Ramp to Door	Truck Competitive Rates	<b>E</b>
40	Steamship/Stack Operator	T-R-T, Door to Door	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>F</b>
42	Steamship/Stack Operator	T-R, Door to Destination Ramp	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>G</b>
45	Steamship/Stack Operator	R-R, Ramp to Ramp	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>H</b>
47	Steamship/Stack Operator	R-T, Origin Ramp to Door	Domestic Container Movements Without Prior or Subsequent Waterborne Movement. Applies to U.S./Canada/Mexican Traffic. Equipment Supplied by Stack Operator or Steamship Line.	<b>I</b>
60	Patron	T-R-T, Door to Door	Patron Supplied Equipment	<b>K</b>
62	Patron	T-R, Door to Destination Ramp	Patron Supplied Equipment	<b>L</b>
65	Patron	R-R, Ramp to Ramp	Patron Supplied Equipment	<b>M</b>
67	Patron	R-T, Origin Ramp to Door	Patron Supplied Equipment	<b>N</b>
80	Steamship/Stack Operator	T-R-T, Door to Door	International Shipments With Prior or Subsequent Waterborne Movement. Includes Alaska, Hawaii, Puerto Rico. Equipment Supplied by Stack Operator or Steamship Line.	<b>O</b>
82	Steamship/Stack Operator	T-R, Door to Destination Ramp	International Shipments With Prior or Subsequent Waterborne Movement. Includes Alaska, Hawaii, Puerto Rico. Equipment Supplied by Stack Operator or Steamship Line.	<b>P</b>
85	Steamship/Stack Operator	R-R, Ramp to Ramp	International Shipments With Prior or Subsequent Waterborne Movement. Includes Alaska, Hawaii, Puerto Rico. Equipment Supplied by Stack Operator or Steamship Line.	<b>Q</b>
87	Steamship/Stack Operator	R-T, Origin Ramp to Door	International Shipments With Prior or Subsequent Waterborne Movement. Includes Alaska, Hawaii, Puerto Rico. Equipment Supplied by Stack Operator or Steamship Line.	<b>R</b>
Unknown	Unknown	Unknown	Unknown	<b>X</b>

<b>Field</b>	<b>Description</b>
<b>9</b>	<b>Number of TOFC/COFC Units</b> (4-digit numeric) The total number of TOFC/COFC units reported on the sampled waybill <sup>1</sup> .
<b>10</b>	<b>Intermodal Unit Ownership Code</b> (1-character alpha) (P) Privately-owned Trailer/Container (R) Railroad-owned Trailer/Container <sup>2</sup>
<b>11</b>	<b>Intermodal Unit Type Code</b> (1-character alpha) (T) TOFC Trailer (C) COFC Container (U) Unknown <sup>2</sup>
<b>12</b>	<b>Hazardous/Bulk Material in Boxcar</b> (1-character alpha) (B) Bulk, non-hazardous material (STCC 50 series), moved in a Boxcar (H) Hazardous material (STCC 49 series) moved in any type of car (blank) neither of the above <sup>8</sup>
<b>13</b>	<b>Commodity Code (STCC / non-HAZMAT)</b> (5-digit numeric) The Standard Transportation Commodity Code (STCC) identifies the product designation for the transported commodity. This field includes the first five digits of the seven-digit STCC; however, STCC 19 series commodities are reported only at the 2-digit level. See <a href="#">STCC Headers</a> for list of two to five digit STCC headers <sup>1</sup> . <b>Note:</b> This field does not include Hazardous materials (series 49xxx) or Bulk materials in Boxcars (series 50xxx). All STCC 49 and 50 series codes have been translated to actual product commodity codes.
<b>14</b>	<b>Billed Weight in Tons</b> (7-digit numeric) The billed weight of lading, calculated in tons <sup>1</sup> .
<b>15</b>	<b>Actual Weight in Tons</b> (7-digit numeric) The actual weight of lading (if provided), calculated in tons <sup>1</sup> .
<b>16</b>	<b>Freight Revenue (\$)</b> (9-digit numeric) The total line-haul freight revenue, from origin to destination, shown in dollars <sup>1</sup> .
<b>17</b>	<b>Transit Charges (\$)</b> (9-digit numeric) Transit charges, where applicable, shown in dollars <sup>1</sup> .

<b>Field</b>	<b>Description</b>
<b>18</b>	<p><b>Miscellaneous Charges (\$)</b> (9-digit numeric)</p> <p>The total of all miscellaneous charges (excluding transit charges and freight revenue) shown in dollars<sup>1</sup>.</p>
<b>19</b>	<p><b>Inter/Intra State Code (inferred)</b> (1-digit numeric)</p> <p>Normally, an Intrastate routing is inferred if the origin and destination states are the same. However, an Interstate routing is inferred in cases where the origin and destination stations are within a state but the customary routing exits and re-enters the state. Interstate movements also include import, export, ex-lake and lake cargo movements.</p> <p>(1) Interstate  (2) Intrastate  (9) Unknown<sup>1</sup></p>
<b>20</b>	<p><b>Type of Move (inferred)</b> (1-digit numeric)</p> <p>(0) Neither import nor export  (1) Imported commodity  (2) Exported commodity  (3) Commodity imported and exported, e.g., land bridge type traffic  (9) Unknown<sup>1</sup></p>
<b>21</b>	<p><b>All Rail/Intermodal Code</b> (1-digit numeric)</p> <p>(1) All Rail  (2) Intermodal - a continuous movement involving at least one railroad and another mode.  (9) Unknown  (X) Not reported on hardcopy waybills<sup>1</sup>.</p>

<b>Field</b>	<b>Description</b>
<b>22</b>	<p><b>Type of Move Via Water (inferred)</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not a water movement</li> <li>(1) Ex-Lake (from Great Lakes to reporting railroad)</li> <li>(2) Lake Cargo (Rail to Great Lakes)</li> <li>(3) Intercoastal - a continuous movement by U.S. rail which is part of an Atlantic Ocean (or Gulf) and Pacific Ocean movement, in either direction.</li> <li>(4) Coastwise - a continuous movement involving rail at either end of a coastwise movement between ports on the East Coast (including Gulf) or between ports on the West Coast.</li> <li>(5) Inland Waterways - a rail movement in combination with a barge movement on rivers and canals (other than the Great Lakes) that is not considered a part of the rail movement, e.g., rail car ferry.</li> <li>(9) Unknown</li> <li>(X) Not reported on hardcopy waybills<sup>1</sup>.</li> </ul>
<b>23</b>	<p><b>Transit Code</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not a transit movement</li> <li>(1) Transit—indicates that the shipment is the outbound movement from a transit point, where some service has been performed, to the destination point (which can be another transit point).</li> <li>(9) Unknown<sup>1</sup></li> </ul>
<b>24</b>	<p><b>Substituted Truck-for-Rail Service</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) Not substituted truck-for-rail service</li> <li>(1) Study movement involves substituted truck-for-rail service. (For example, a rail carrier may be authorized by the STB to institute truck for rail service when rail service is abandoned or a track is closed for various reasons.)</li> <li>(9) Unknown</li> <li>(X) Not reported on hardcopy waybills<sup>1</sup>.</li> </ul>
<b>25</b>	<p><b>Rebill Code</b> (1-digit numeric)</p> <ul style="list-style-type: none"> <li>(0) local shipment</li> <li>(1) originated—delivered</li> <li>(2) received—delivered</li> <li>(3) received—terminated</li> </ul>
<b>26</b>	<p><b>Estimated Short Line Miles (rounded)</b> (4-digit numeric)</p> <p>The short line miles (shortest rail distance between origin and destination), rounded up to the nearest ten miles<sup>6</sup>.</p>

Field	Description																											
27	<p><b>Stratum Identification</b> (1-digit numeric)</p> <table border="1"> <thead> <tr> <th></th> <th><i>Carloads per Waybill</i></th> <th><i>Sampling Rate</i></th> </tr> </thead> <tbody> <tr> <td>(1) MRI</td> <td>1–2</td> <td>1 of 40</td> </tr> <tr> <td>(2) MRI</td> <td>3–15</td> <td>1 of 12</td> </tr> <tr> <td>(3) MRI</td> <td>16–60</td> <td>1 of 4</td> </tr> <tr> <td>(4) MRI</td> <td>61–100</td> <td>1 of 3</td> </tr> <tr> <td>(5) MRI</td> <td>Over 100</td> <td>1 of 2</td> </tr> <tr> <td>(6) Hardcopy (FTP)</td> <td>1–5</td> <td>1 of 100</td> </tr> <tr> <td>(7) Hardcopy (FTP)</td> <td>6–25</td> <td>1 of 10</td> </tr> <tr> <td>(8) Hardcopy (FTP)</td> <td>26 or more</td> <td>1 of 5<sup>1 or 6</sup></td> </tr> </tbody> </table>		<i>Carloads per Waybill</i>	<i>Sampling Rate</i>	(1) MRI	1–2	1 of 40	(2) MRI	3–15	1 of 12	(3) MRI	16–60	1 of 4	(4) MRI	61–100	1 of 3	(5) MRI	Over 100	1 of 2	(6) Hardcopy (FTP)	1–5	1 of 100	(7) Hardcopy (FTP)	6–25	1 of 10	(8) Hardcopy (FTP)	26 or more	1 of 5 <sup>1 or 6</sup>
	<i>Carloads per Waybill</i>	<i>Sampling Rate</i>																										
(1) MRI	1–2	1 of 40																										
(2) MRI	3–15	1 of 12

## Surface Transportation Board Car Types

Table 4-9. STB Car Types

Schedule 710 Line Number	Description	Car Type Code
0	Locomotives	All Code D
36	Plain Box Cars 40'	B1 - B2__
37	Plain Box Cars 50' and longer	B3_0-7, B4_0-7, B5 , B6 , B7 , B8_
38	Equipped Box Cars	All Code A
39	Plain Gondola Cars	All Code G and J 1, J 2, J 3, and J 4
40	Equipped Gondola Cars	All Code E
41	Covered Hopper Cars	All Code C
42	Open Top Hopper Cars—General Service	All Code H
43	Open Top Hopper Cars—Special Service	All Code K, and J 0
44	Refrigerator Cars—Mechanical	R_6_, R_7_, and R_9_
45	Refrigerator Cars—Non-Mechanical	R_0_ and R_1_
46	Flat Cars TOFC/COFC	All Code P, Q, S, and U except Q8_
47	Flat Cars—Multi-Level	All Code V
48	Flat Cars—General Service	F10_, F20_, and F30_
49	Flat Cars—Other	F_1_, F_2_, F_3_, F_4_, F_5_, F_6_, F_8_, F40_, and F49__
50	Tank Cars—Under 22,000 Gallons	T 0, T 1, T 2, T 3, T 4, and T 5
51	Tanks Cars—22,000 Gallons And Over	T 6, T 7, T 8, and T 9
52	All Other Freight Cars	All Code L, Q8, and F_7_
54	Caboose	Code M930

## Umler Field Descriptions—Data Layout Detail

Table 4-10. Umler Field Descriptions—Data Layout Detail

Description	Field Length	Format	Equipment Type
<b>1) AAR Equipment Type Code</b>	<b>4</b>	<b>A</b>	<b>All</b>
Alphanumeric, report the Equipment Type Code that corresponds to the car's Mechanical Designation and special attributes.			
For articulated/multi-units, when the Equipment Type Code requires a load limit, the Equipment Type Code must correspond to the total load limit of the unit.			
<b>2) Cubic Feet Capacity-Actual</b>	<b>5</b>	<b>N</b>	<b>All</b>
Numeric actual, i.e., drawing dimension, inside volume of car in cubic feet—end to end, side to side, and from floor to carline.			
<ul style="list-style-type: none"> <li>• <i>Box:</i> Minimum 02000 to 11000 Maximum</li> <li>• <b>Note:</b> If automobile parts box cars equipped with loading racks and can be loaded with other commodities, report a cubic capacity reduced the amount corresponding to the overall depth of the racks when raised in a stored position against roof of car.)</li> <li>• <i>Gondola, Covered Hopper &amp; Hopper:</i> Minimum 00400 to 08500 Maximum</li> <li>• <b>Note:</b> For covered hoppers this field must agree with Equipment Type Code.)</li> <li>• <i>Refrigerator:</i> Minimum 01400 to 06700 Maximum</li> </ul>			
<b>Note:</b> For ARTICULATED/MULTI-UNIT SETS, report the sum of the units' cubic capacity.			
<b>3) Zeros (Formerly Umler Nominal Capacity)</b>	<b>3</b>	<b>N</b>	<b>All</b>
<b>Note:</b> Report zeros. If blanks are reported they will be output as zeros.			
<b>4) Tare Weight (00)</b>	<b>4</b>	<b>N</b>	<b>All</b>
Numeric, the actual light weight (tare) in hundreds of pounds for each car. If ARTICULATED, report in hundreds of pounds the sum of the lightweight, for the total number of units of the consist. Rounding instructions, e.g., actual 17550 report as 0175; actual 17551 report as 0176.			
<b>Note:</b> When reporting new cars (except advance registration) and cars that have been reweighed, the Weighing Road (Data No. 46) and Weighing Date (Data No, 47) must be reported.			
<ul style="list-style-type: none"> <li>• <i>Box:</i> Minimum 0160 to 1600 Maximum</li> <li>• <i>Gondola:</i> Minimum 0300 to 1100 Maximum</li> <li>• <i>Covered Hopper and Hopper:</i> Minimum 0230 to 1200 Maximum</li> <li>• <i>Refrigerator:</i> Minimum 0160 to 1400 Maximum</li> </ul>			

Description	Field Length	Format	Equipment Type
<b>5) Outside Dimensions—Length</b>	<b>5</b>	<b>N</b>	<b>All</b>

Numeric distance over pulling faces of couplers in normal positions. For ARTICULATED/MULTI-UNIT sets report the maximum coupled length of the set. (For ARTICULATION see Section VII). \*- Must be between 2 and 16 feet greater than inside length. Feet in Pos. 20-22, inches in Pos. 23-24. Round fraction to the higher inch, e.g., 05 ¼” = 06.

- *Box:* Minimum 03000 to 09811 Maximum
- *Gondola:* Minimum 02500 to 09500 Maximum  
**Exception:** GT ore jenny (Equipment Type Code J 00) Minimum 02400 to 05111 Maximum
- *Covered Hopper and Hopper:* Minimum 02000 to 08011 Maximum  
**Exception:** HMA ore jenny (Equipment Type Code K \_8\_): Minimum 02000 to 05111 Maximum
- *Refrigerator:* Minimum 03000 to 09811 Maximum

**Note 1:** Articulated/Multi-Unit sets in excess of 1,000 feet, report 99911.

**Note2:** Cars having a Gross Rail Load (GRL) of 286,000 lbs. must have minimum outside length greater than 41’ 11”.

**Note 3:** The edit criteria for Articulated/Multi-Unit sets for the outside length is equal to or greater than the number of articulated units x the minimum edit parameter for the equipment type. Ex:  
Box—5 x 03000 = 15000.

<b>6) Outside Dimensions/Upper Eaves Width</b>	<b>4</b>	<b>N</b>	<b>All</b>
--	----------	----------	------------

Numeric, measurement over top of eaves at side of car.

**Must:** (1) not exceed the outside extreme width, (2) not be greater than lower eaves width if lower eaves width is reported, (3) agree relationally with height from rail to upper eaves for clearance code reported. Feet in Pos. 37-38, inches in Pos. 39-40. Round fraction to the higher inch, e.g., 05 ¼” = 06.

If clearance is B	Minimum—04 00 to Maximum—10 08
If clearance is C	Minimum—04 00 to Maximum—10 08
If clearance is E	Minimum—04 00 to Maximum—10 08
If clearance is F	Minimum—04 00 to Maximum—10 08
If clearance exceeds plates B, C, E, F (Code G)	Minimum—04 00 to Maximum—10 11

For ARTICULATED/MULTI-UNIT SETS, report the dimension of the largest UNIT in the set. (For ARTICULATION see Section VII).

Description	Field Length	Format	Equipment Type
<b>7) Upper Eaves—Height</b>	<b>4</b>	<b>N</b>	<b>All</b>

Numeric, measurement is from rail to top of eaves at side of car.

**Must:** (1) not exceed extreme height, (2) not be less than the lower eaves height, if lower eaves height is reported, (3) agree relationally with upper eaves width for clearance code reported. Feet in Pos. 41-42, inches in Pos. 43-44. Round fraction to the higher inch, e.g., 05 ¼” = 06.

- *Box, Stock, Refrigerator:*

If clearance is B	Minimum—08 00 to Maximum—15 01
If clearance is C	Minimum—08 00 to Maximum—15 06
If clearance is E	Minimum—08 00 to Maximum—15 09
If clearance is F	Minimum—08 00 to Maximum—17 00
If clearance exceeds plates B, C, E, F (Code G)	Minimum—08 00 to Maximum—17 11

- *Gondola, Covered Hopper & Hopper:*

If clearance is B	Minimum—02 00 to Maximum—15 01
If clearance is C	Minimum—02 00 to Maximum—15 06
If clearance is E	Minimum—02 00 to Maximum—15 09
If clearance is F	Minimum—02 00 to Maximum—17 00
If clearance exceeds plates B, C, E, F (Code G)	Minimum—02 00 to Maximum—17 11

For ARTICULATED/MULTI-UNIT SETS, report the dimension of the largest UNIT in the set.

<b>8) Outside Dimensions-Extreme Height</b>	<b>4</b>	<b>N</b>	<b>All</b>
---	----------	----------	------------

Numeric, height from top of rail to extreme projection height, Feet in Pos. 33-34, inches in Pos. 35-36. Round fraction to the higher inch, e.g., 05 ¼” = 06.

If clearance is B	Minimum—02 00 to Maximum—15 01
If clearance is C	Minimum—02 00 to Maximum—15 06
If clearance is E	Minimum—02 00 to Maximum—15 09
If clearance is F	Minimum—02 00 to Maximum—17 00
If clearance exceeds plates B, C, E, F (Code G)	Minimum—02 00 to Maximum—18 01

For ARTICULATED/MULTI-UNIT SETS, report the dimension of the largest UNIT in the set.

Description	Field Length	Format	Equipment Type
<b>9) Bearing &amp; Brake Shoe Type</b>	<b>1</b>	<b>A</b>	<b>All</b>

Alphabetic code indicating the type of journal bearings and brake shoes.

- (A) Plain bearings and composition brake shoes
- (B) Roller bearings and composition brake shoes
- (C) Plain bearings and cast iron brake shoes
- (D) Roller bearings and cast iron brake shoes
- (E) Roller bearings, composition brake shoes and constant contact side bearings
- (F) Roller bearings, cast iron brake shoes and constant contact side bearings
- (G) Roller bearings, composition brake shoes and empty/load brake system
- (H) Roller bearings, composition brake shoes, constant contact side bearings and empty/load brake system
- (I) Roller bearings, cast iron brake shoes and empty/load brake system
- (J) Roller bearings, cast iron brake shoes, constant contact side bearings and empty/load brake system
- (K) Roller bearings, composition brake shoes and designed for high speed train operations
- (L) Roller bearings, composition brake shoes, empty/load brake system and designed for high speed train operations

**Note 1:** Cars having plain bearing codes A or C will be edited to ensure compliance with AAR interchange Rules. The code A or C may be present in the record if the transportation codes are equal to XJ.

<b>10) Axles</b>	<b>1</b>	<b>A</b>	<b>All</b>
------------------	----------	----------	------------

Report the applicable alphanumeric code indicating the number of axles per car.

**Note 1:** Mandatory for cars with 286,000 - pound total weight on rail.

**Note 2:** For ARTICULATED/MULTI-UNIT SETS, axles reported must be equal to or greater than: (2 x nbr. artic. Units) + 2.

Unit A	Unit D	Unit C	Unit B
2 1	1 1	1 1	1 2

(For ARTICULATION see Section VII).

Axle Code	Axles per Car	Axle Code	Axles per Car	Axle Code	Axles per Car	Axle Code	Axles per Car
2	2	C	13	K	21	S	29
4	4	D	14	L	22	T	30
6	6	E	15	M	23	U	31
8	8	F	16	N	24	V	32
9	9	G	17	O	25	W	33
0	10	H	18	P	26	X	34
A	11	I	19	Q	27	Y	35
B	12	J	20	R	28	Z	36 or more

Description	Field Length	Format	Equipment Type
<b>11) Draft Gear/Coupler</b>	<b>2</b>	<b>N</b>	<b>All</b>

Numeric, report the code indicating the type of draft gear and coupler.

- 55 Solid drawbar on both ends.
- 56 Articulated connector at intermediate connection.
- 57 Standard Draft Gear with solid drawbar rotary at the other end.
- 58 Solid drawbar one end with solid drawbar rotary at the other end.
- 59 Solid drawbar one end with draft gear rotary other end.
- 60 Solid drawbar one end E, F or E/F coupler.
- 66 Standard Draft Gear (24-5/8" pocket) with E, F or E/F bottom shelf coupler.
- 67 Hydraulic Draft Gear (3.25" to 6" stroke) with E, F or E/F bottom shelf coupler.
- 77 Standard Draft Gear (24-5/8" pocket) with E, F or E/F double (top and bottom) shelf coupler.
- 78 Hydraulic Draft Gear (3.25" to 6" stroke) with E, F or E/F double (top and bottom) shelf coupler.
- 88 Standard Draft Gear (24-5/8" pocket) with E or E/F coupler.
- 89 Hydraulic Draft Gear (3.25" to 6" stroke) with E or E/F coupler.
- 94 Hydraulic Draft Gear (3.25" to 6" stroke) with single rotary coupler at the B end.
- 95 Standard Draft Gear (24-5/8" pocket) with single rotary coupler at the B end.
- 96 Standard Draft Gear (24-5/8" pocket) with two rotary couplers.
- 97 Hydraulic Draft Gear (3.25" to 6" stroke) with two rotary couplers.
- 98 Hydraulic Draft Gear (3.25" to 6" stroke) with one rotary coupler at the A end.
- 99 Standard Draft Gear (24-5/8" pocket) with one rotary coupler at the A end.

Car equipped with sliding center sills or cushioned draft gear, report the inches of travel from normal position to maximum position to maximum extension for one end of car.

Inches of Travel                      Minimum 05 to 36 Maximum

**Note 1:** Equipment with rotary couplers, codes 57 through 59 and 95 through 99 must have the codes FROTARY or EROTARY reported accordingly in Coupler A-End and Coupler B-End (Data Nos. 41 and 42).

## AAR Equipment Type Code

The current equipment type codes and descriptions can be viewed on Railinc's website at [Railinc.com](http://Railinc.com).

<https://www.railinc.com/rportal/umlerreferences>

Figure 4-2. U.S. Census Bureau Region Map

## CS54 Group Codes

1. Railroads in the *Weekly Railroad Traffic* report originated approximately 87 percent of U.S. freight carloads, and 97 percent of intermodal units, during 2010. When the U.S. operations of the Canadian railroads are included, the figures increase to 96 percent and 100 percent. The Canadian railroads in the *Weekly Railroad Traffic* report accounted for 96 percent of Canadian traffic in 2002.
2. U.S Class I railroads are those earning revenues of at least 398.7 million in 2010, as defined by the Surface Transportation Board.
3. Individual week comparisons to the prior year are made to the week which ended 52 weeks earlier.
4. Revisions to the traffic data may be submitted by reporting railroads through the end of the following calendar year. When a railroad is unable to submit its traffic figures for the current week, the AAR repeats the figures from the prior year. These figures are replaced with carrier-reported figures as soon as possible, and cumulative figures and weekly data for the previous year incorporate these changes.
5. The following commodity groups are used for reporting carload traffic in Part A:

1.	Grain	STCC 0113 and 01144—includes grains (wheat, corn, oats, sorghum, etc.) and soybeans.
2.	Farm Products, Ex. Grain	STCC 01, except 0113 and 01144—includes all farm products except grains and soybeans.
3.	Metallic Ores	STCC 10—includes all metallic ores, such as iron, copper, lead, zinc, gold, silver, bauxite or aluminum, manganese, tungsten, and chromium ores.
4.	Coal	STCC 11—includes anthracite, bituminous, and lignite coal.
5.	Crushed Stone, Sand and Gravel	STCC 142 and 144—includes crushed or broken stone or riprap and sand or gravel.
6.	Nonmetallic Minerals	STCC 14, except 142 and 144—includes nonmetallic minerals (clay, phosphate rock, rock salt, etc.), except fuel, and crushed stone, sand and gravel.
7.	Grain Mill Products	STCC 204 and 20923—includes flour, prepared feed, cereal preparations, milled rice, wet corn milling or sorghum products, soybean cake.
8.	Food and Kindred Products	STCC 20, except 204 and 20923—includes all food and feed products, except grain mill products (distillers, dried grains).
9.	Primary Forest Products	STCC 241—includes primary forest or wood raw materials, except sawmill products.
10.	Lumber and Wood Products	STCC 24, except 241—includes all lumber and wood products, except furniture, and primary forest products.
11.	Pulp, Paper, and Allied Products	STCC 26—includes all products from pulp mills, paper, paperboard or fiberboard, containers or boxes, and building paper or board.
12.	Chemicals	STCC 28 and 49—includes all chemicals and allied products, and hazardous materials.
13.	Petroleum Products	STCC 291—includes crude and all products of petroleum refining, such as gasoline, jet or high volatile fuels, kerosene, distillate fuel oil, lubricating oils and greases, asphalt pitches or tars, residual fuel oils, and liquefied gases.
14.	Stone, Clay and Glass Products	STCC 32—includes all types of glass products, hydraulic cement, structural clay products, pottery or related products, concrete, gypsum or plaster products, cut stone or stone products, and abrasives or asbestos products.
15.	Coke	STCC 29911, 29913 and 29914—includes coal or coke briquettes, petroleum coke, and coke produced from coal.
16.	Metals and Products	STCC 33 and 34—includes primary metal products, including galvanized, and fabricated metal products, except ordnance materials, machinery and transportation equipment.
17.	Motor Vehicles and Equipment	STCC 371—

## SECTION 5 2017 WAYBILL MILING METHODOLOGY

The following documentation is included in this section:

- I. Overview
- II. Step 1: Match Waybill Data to Railinc Event Repository Data
  - A. Match STB Waybills to Railinc Trips
  - B. 1.2 Define Movement Events
  - C. 1.3 Determine if the Movement Event Route ‘Matches’ the Waybill Route
  - D. 1.4 Apply Mileage Using Events
  - E. 1.5 Validate Mileage Pairs
  - F. 1.6 Validate the Calculated Mileage for Each Waybill
  - G. 1.7 Send Waybills That Were Held to Pattern Match
- III. Step 2: Utilize Waybill Pattern Matching
  - A. 2.1 Define Waybill Patterns
  - B. 2.2 Match Waybills to Patterns
  - C. 2.3 Apply Median Waybill Data to Pattern Matched Waybills
  - D. 2.4 Send Remaining Unmiled Waybills to Step 3
- IV. Step 3: Utilize Enhanced Waybill Routing Logic
- V. Final Processing
  - A. 4.1 Apply Border Crossing Logic
  - B. 4.2 Modify Waybill Sample Interchanges if Necessary
  - C. 4.3 Apply State Flags
- VI. Step 5: Apply Shortline Miles to the Final File

## Overview

The purpose of this section is to explain the methodology Railinc utilized to apply miles to the 2017 Miling and Modifying Waybill Sample file. The foundation of the mileage methodology is the TRAIN II system. The TRAIN II system is the mechanism used by over 500 railroads to report movement events to Railinc for sharing with other railroads and their customers. An overview of the TRAIN II system is provided in Appendix C and a detailed document is also available from Railinc. The messages from the TRAIN II system are stored in the Event Repository (ER).

Because there is no direct link between the waybills in the sample and the movement events railroads report to Railinc in the ER, the goal of Railinc’s miling methodology is to apply ER railroad miles to the waybills. The methodology is structured to ensure event-based data is utilized as the primary source of mileage. The first step is to determine if the waybill in the sample can be matched to a set of events based on the waybill date, the railroads involved and the origin and destination. (There are waybills in the sample that did not have movement events recorded in the ER.) If a suitable event match cannot be determined, we look to see if there are very similar waybills in the 2017 sample that were miled based on events. If a sufficient number of similar event-miled waybills are found, we use that pattern of waybills to determine the miles. If too few or no similar event-miled waybills are found, utilize an Enhanced Waybill Routing Logic (EWR) model that is based on the Federal Railroad Administration’s North American Rail Network. Thus, the three steps are: (1) match waybill data to Railinc event data (sum miles for event pairs in the trip), (2) apply pattern matching to any waybills not miled after step 1 and (3) utilize the EWR model for any waybills not miled after step 2. Each of the high level steps and the sub processes are outlined in this section.

Table 5-1 outlines the summary statistics for the three step process. There were a total of 649,772 waybills submitted for the 2017 STB Waybill Sample:

*Table 5-1. Three Step Methodology*

Three Step Methodology	Count	Percent of Total
Match Waybill Data To Railinc Event Data	557,815	83.19%
Pattern Matching	46,995	7.01%
Enhanced Waybill Routing Logic	65,686	9.80%
Total	670,496	100%

The following explanations are about Railinc’s systems:

**Event Repository (ER):** Railinc stores all movement events reported via the TRAIN II system by the Railroads in an Event Repository. For more details on the TRAIN II system, please see [Appendix B](#). Railroads reported over three (3) billion events in 2017. The ER is also utilized for calculating Car Hire for the industry on a monthly basis.

**Equipment Cycle (EQC):** Railinc organizes the movement events into trips. A trip is a set of movement events that describe a car’s movement from origin to destination. For example, a trip

will start when the customer notifies the railroad the shipment has been released and the railroad sends Railinc a release movement event. Events on the progress of the shipment from origin to destination along with the final placement of the car at the customer are grouped together and defined as a trip.

## Step 1: Match Waybill Data to Railinc Event Repository Data

### 1.1 Match STB Waybills to Railinc Trips

Waybills in the sample are matched with trips created in Railinc's EQC process using the following parameters from the STB Waybill:

- Waybill date
- Origin railroad
- Destination railroad
- Origin location
- Terminating location

Locations are defined utilizing the industry reference file for Standard Point Location Codes (SPLCs).

When an EQC trip match cannot be determined, the waybills are held for pattern matching in Step 2.

### 1.2 Define Movement Events

For each waybill that was matched with a trip, all of the events for that trip are selected from the ER. A waybill could match all or part of a trip. Additional processing is performed to identify the subset of events in the trip that match the waybill submitted in the sample.

Events are selected via a 'Best Match' algorithm that determines the most logical start and end event of the waybill based on the origin and destination listed on the waybill. The start of trip (SOT) event is the event that best matches the origin on the waybill. The end of trip event (EOT) is the best match for the destination on the waybill.

- A match can fall into one of three categories in order of precedence:
  - **1 - Natural Match:** An exact match in events by both Railroad and SPLC.
  - **2 - Location Match:** The SPLC reported on the waybill matches the SPLC reported in an event.
  - **3 - Approximate Match:** The Railroad is an exact match and the SPLC found in the reported events is within 30 miles of the SPLC reported on the waybill.

A summary of the SOT and EOT match types (from Step 1) are listed in Table 5-2:

*Table 5-2. A Summary of the SOT and EOT Match Types*

SOT Match Type	EOT Match Type	Count	Percent
Natural Match	Natural Match	370,104	66.35%
Natural Match	Location Match	19,819	3.55%
Natural Match	Approximate Match	70,463	12.63%
Location Match	Natural Match	15,683	2.81%
Location Match	Location Match	1,783	0.32%
Location Match	Approximate Match	3,465	0.62%
Approximate Match	Natural Match	61,608	11.04%
Approximate Match	Location Match	2,983	0.53%
Approximate Match	Approximate Match	11,907	2.13%
Total		557,815	100.00%

See Appendix C for a detailed example.

### 1.3 Determine if the Movement Event Route ‘Matches’ the Waybill Route

#### 1.3.1 Route match definition

The movement events identified between the SOT and the EOT above are analyzed to develop the route the car in the waybill sample traveled. Interline routes are defined as origin SPLC and Railroad to a junction where the car is interchanged to another Railroad to be taken to the next junction or destination. Local routes are defined as origin SPLC, railroad and destination SPLC.

A route match is determined by the following:

- Origin and destination match
  - An event is reported by the origin (terminating) railroad at or within 30 miles of the origin (terminating) SPLC on the waybill or
  - An event is reported by a different railroad with the same SPLC as the origin (terminating) SPLC
- Interchange match: each of the railroads in the waybill route either receives or delivers the car within 30 miles of the origin/junction/destination on the waybill

The distance of 30 miles was selected to account for the area around gateways.

### 1.3.2 Examples of waybill route to event route matches:

The first example, in Table 5-3 below, shows the difference in how the route was reported on the waybill and how the equipment actually moved. In the waybill route details, the equipment is moving from the origin SPLC 123456 where Railroad #1 will move the equipment to SPLC 345678 and interchange the equipment to Railroad #2. Railroad #2 will then move the equipment to the destination SPLC 654321. In the event route details, the Railroad #3 is interchanging the equipment between Railroad #1 and Railroad #2 at SPLC 987654. Because SPLC 987654 is within 30 miles of the waybill reported SPLC 345678 the Railroad #3 is used and the miles are then applied to Railroad #1.

The second example illustrates a railroad not in the waybill route is delivering the equipment to final destination. In the waybill route details, the equipment is moving from the origin SPLC 123456 to the destination SPLC 987654 on Railroad #1. The event route details show the equipment from origin SPLC 123456 moving to SPLC 654321 where the equipment is interchanged to Railroad #2 for delivery to destination SPLC 987654. The Railroad #2 miles are applied to Railroad #1.

The third example illustrates a railroad not in the waybill route originating the equipment and interchanging the equipment to the railroad in the waybill. In the waybill route details the equipment is moving from the origin SPLC 123456 to the destination SPLC 987654 on Railroad #2. The event route details show the equipment from origination on the Railroad #1 from origin SPLC 123456 moving to SPLC 654321 where the equipment is interchanged to Railroad #2. Railroad #2 moves the equipment to destination SPLC 987654. Railroad #1 miles are applied to Railroad #2.

*Table 5-3. Waybill Route vs. Event Route*

No.	Routes	Details
1	Waybill Route	123456-Railroad #1-345678-Railroad #2-654321
	Event Route	123456-Railroad #1-987654-Railroad #3-987654-Railroad #2-654321
2	Waybill Route	123456-Railroad #1-987654
	Event Route	123456-Railroad #1-654321-Railroad #2-987654
3	Waybill Route	123456-Railroad #2-987654
	Event Route	123456-Railroad #1-654321-Railroad #2-987654

## 1.4 Apply Mileage Using Events

When a match is found, Railinc takes the selected events from the waybill and ER and pairs those events together. This prepares the data for mileage assignment. Miles are not calculated when the event pair is at the same location. In the example below events 0,1 and 2 are all at the same location. To get the miles for the reported event 3 we will pair this event to event 2.

Table 5-4. Example with Mileage Assignment

SOT and EOT Match	Event Timestamp	Event Type	Message From Road	Message To Road	Location	Event Reference
SOT Location Match	14FEB17:16:24	ARIL	Railroad #1		1TX, US	0
SOT Natural Match	14FEB17:16:29	ICHR	Railroad #1	Railroad #2	1TX, US	1
SOT Location Match	14FEB17:16:29	ICHD	Railroad #1	Railroad #2	1TX, US	2
SOT Natural Match	14FEB17:20:00	DFLC	Railroad #2		2TX, US	3
	14FEB17:20:30	ARIL	Railroad #2		3TX, US	4
	15FEB17:08:31	DFLC	Railroad #2		4TX, US	5
EOT Natural Match	15FEB17:08:55	DFLC	Railroad #2		5TX, US	6

From Event	Action	To Event	Miles
Event 2	Paired With	Event 3	10
Event 3	Paired With	Event 4	20
Event 4	Paired With	Event 5	15
Event 5	Paired With	Event 6	25
		Total Miles	70

## 1.5 Validate Mileage Pairs

Railinc uses its Enhanced Waybill Routing Logic (EWRL) model to determine rail distances between event pair locations. This model utilizes an ESRI server and the North American Rail Network (NARN) as supplied by the FRA. The model utilizes various impedance values that attempt to route between locations in the following order:

- First, over track indicated as owned by the railroad
- Second, over track the Railroad listed as having trackage rights on
- Third, over any available track. High impedances make this option very unlikely.

The miles between the event pairs are determined by the EWRL model and are reviewed for data quality. Pairs that do not meet the data quality criteria, identified below, are defined as suspect. Suspect pairs are defined with the following criteria:

- Miles between the paired events are greater than 300, and the average miles per hour is greater than 100

- EWRL process could not identify rail miles between the two locations on the paired events.

Waybills that have one or more suspect event pairs are not miled using the Step 1 approach and instead are held for pattern matching in Step 2.

## 1.6 Validate the Calculated Mileage for Each Waybill

For mileage produced in Step 1 to be considered a valid total mileage value, the following rules must be true:

- A high mileage validation where the total miles for the waybill from the event based mileage process must be less than 4000 (Note: this validation rule is not applied to Step 3)
- The total event based miles must be greater than the ‘as the crow flies’ straight line miles from origin to destination
- Total interchanges are less than or equal to six (6)

Total mileage values that do not pass validation are held for pattern matching in Step 2.

## 1.7 Send Waybills That Were Held to Pattern Match

Waybill Sample Records that were held are sent to Step 2.

# Step 2: Utilize Waybill Pattern Matching

## 2.1 Define Waybill Patterns

### 2.1.1 Create patterns from the event-based miled waybills

It is important to note that pattern matches are still using event-based mileage. A pattern is defined as a group of miled waybills with the same:

- ISM Service Group - group of Standard Transportation Commodity Codes (STCCs)
- Origin railroad
- Origin SPLC
- Interchange location and railroads (when interchanges are present)
- Destination railroad
- Destination SPLC

For a pattern to be used for matching in step 2, i.e., a “good pattern,” it must have at least five waybills with event-based mileage from Step 1. A minimum requirement of five waybills was chosen as a logical sample size to sufficiently represent the normal variability of a pattern.

### **2.1.2 Determine the median waybill for each good pattern**

The median waybill is the waybill whose total miles fall in the middle of the distribution of miles for the other waybills in the pattern.

## **2.2 Match Waybills to Patterns**

Evaluate each unmiled waybill from Step 1 to see if it matches a “good pattern”.

## **2.3 Apply Median Waybill Data to Pattern Matched Waybills**

Utilize the miles by railroad from the median waybill for each unmiled waybill that matched the pattern. The pattern matched waybills are now miled according to the median waybill from the pattern.

## **2.4 Send Remaining Unmiled Waybills to Step 3**

Not all unmiled waybills from Step 1 will match a “good pattern” in Step 2. The remaining unmiled waybills move to Step 3 in the miling process.

# **Step 3: Utilize Enhanced Waybill Routing Logic**

If a waybill does not match a trip in Step 1 or a pattern in Step 2, the EWRL model is utilized to determine the likely route. In this approach, the total miles and segmented railroad miles are calculated from the route reported on the waybill using the Federal Railroad Administration’s North American Rail Network. The EWRL model incorporates track ownership and trackage rights to assign a likely route for the waybill.

# **Step 4: Final Processing**

## **4.1 Apply Border Crossing Logic**

### **4.1.1 Event Based and Pattern**

Railinc determines the event pairs for each waybill, and the pairs are evaluated geospatially for border crossings.

**Note:** If the border crossings, which are handled by defining new interchanges, produce more than 7 total interchanges, the waybill is then dropped from the event-based mileage and miled via Step 3. Border crossing are then evaluated with the logic in 4.1.2.

#### **4.1.2 Enhanced Waybill Routing Logic (EWRL):**

Railinc determines the route segments for each waybill, establishes mileage for each segment, and those route segments are then evaluated geospatially for border crossings.

#### **4.1.3 Customer Border Logic:**

Custom border logic defined by the STB is then applied to split miles between the US and Canada.

## **4.2 Modify Waybill Sample Interchanges if Necessary**

The only time the route as reported on the waybill is altered, if necessary, is to add the ‘Faux’ interchanges for US/CA border crossings. The originally submitted data is available to the FRA/STB in a separate file.

## **4.3 Apply State Flags**

As the track sections that comprise the total mileage for a waybill are identified, the mileage by state and country is also captured. If there are miles greater than zero for a state, the state flag is set to 1 for that specific state and waybill. If the mileage is not greater than 1, the state flag remains blank. It is possible for the state flag to be set to 1 when the movement did not take place in that particular state. This is caused by ER-based miles which have interchanges that may be with a 30 mile radius.

Track sections miled in Step 1 and 2 are sections of track between event pairs as described in section 1.4. Track sections in step 3 are from origin to interchange, interchange to interchange or interchange to destination. The state flag methodology is the same for Steps 1, 2 and 3.

## **Step 5: Apply Shortline Miles to the Final File**

In the event a railroad does not populate the Shortline Mileage (field 24), the field is populated with the mileage calculated from the EWRL model.

It is possible for the shortline mileage value in field 24 to be larger than the total miles for the following reasons:

- Shortline miles reported by a railroad are longer than Railinc’s calculations. In this scenario, Railinc does not update what was reported by the railroad in field 24.

- The ER-based mileage process may have reported a precise SOT or EOT in an alternate locations from what was reported on the waybill due to the approximate match approach defined in Step 1.2 above (i.e., within 30 miles ).
- The ER-based miles have interchanges that are within the 30 mile radius of the interchanges in the waybill route. This could cause the ER-based miles to vary around interchanges.
- It was an intermodal movement where a substantial part of the trip was not on rail. The ER-based miles only include miles on rail. Note: Intermodal waybills miled in Step 3 will be miled from origin to destination entirely on rail because there is no ER data to differentiate the rail/non-rail portions of the movement.
- One or more short lines not on the waybill route were involved in the ER-based movement. The model may have chosen a longer path based on the track attributes in NARN – short line track attributes do not show the trackage rights.

# APPENDIX A: THE CARLOAD WAYBILL STATISTICS: USEFULNESS FOR ECONOMIC ANALYSIS\*

## INTRODUCTION

In recent years, before major reductions in governmental economic regulation of the railroad and motor carrier industries, a wide variety of transportation-related data bases were publicly available. These data bases encompassed annual reports, traffic flow samples, financial reports, equipment utilization studies and many other types of data and analyses generated from the government mandated data provided by private sector firms. The combination of deregulation, governmental budget cuts, and the Federal Paperwork Reduction Act of 1980 have reduced or eliminated the availability of the timely and expansive data bases which prevailed before 1980. For example, the Commodity Transportation Survey of the 1977 Census of Transportation was not fully redone until the 1993 Commodity Flow Survey. Concurrently, 1980 marked the last year where the inland water carriers and non-class I railroads were required to file annual reports with the Interstate Commerce Commission (ICC)<sup>1</sup>. Publications by private sector firms such as TRINCS and Transportation Facts and Trends have either been reduced in scope or eliminated due, in part, to a lack of information.<sup>2</sup> With the advent of deregulation, collection of data for many regulatory purposes was no longer necessary. Although in recent years the government has generally reduced data reporting requirements, the railroad Waybill Sample has actually been expanded. Beginning in mid-1981, the railroad industry, in return for the ability to provide this traffic sample on computer tape, was required to provide additional information.

The history of the Waybill Sample dates to the late 1800's, when data for specific shippers' freight movements were collected and analyzed for proceedings before the ICC. The first all commodity annual Waybill Sample was conducted in 1939, but it was not until 1946 that the continuous sample was initiated. Since that time, the continuous sample has undergone significant changes in submission methods and sampling rates. Although generally referred to as the "one percent" Waybill Sample, the overall sampling rate today is close to three percent.<sup>3</sup>

Waybill data have been used by shippers, consultants, railroads, and various federal and state governmental agencies in a wide array of cases before the ICC (now the STB), state regulatory bodies, and the courts. Aside from these judicial or regulatory uses, the Waybill Sample is utilized as a tool for market research and analysis. The Waybill is also used in the annual calculation of the statutorily-mandated Cost Recovery Percentage<sup>4</sup> and as the basis for the Productivity Adjustment Factor for the Rail Cost Adjustment Factor.<sup>5</sup> In addition, the Waybill has been used to: develop the multi-level (auto flatcar) reload program, perform market-share analyses, equipment utilization studies, car cycle analyses, and hazardous material flow and risk cost assessment as well as to evaluate other rail data bases such as the TeleRail Automated Information Network (TRAIN II) and the Freight Commodity Statistics (FCS).

While the STB provides a precise set of instructions for the sampling and reporting of the Waybill Sample, there exists a flexibility in the billing methods authorized in the Official Railway Accounting Rules which can produce subtle nuances in the sample data. One example is the rebilling of interline received or bridge traffic as local traffic. This rebilling tends to understate the actual length of haul for the movement. Unless these nuances in the Waybill Sample are fully understood, the use of these data and the ensuing conclusions from their analysis may be flawed. The remainder of this paper addresses several major waybill data concepts which, in some recent applications, appear to have been discounted or ignored, and provides guidelines for their interpretation.

## MAJOR WAYBILL ISSUES

### Waybill Sampling Rate

While intended to be a "one percent" sample, in reality the Waybill Sample was closer to an 0.7 to 0.9 percent sample of waybills during the years 1946 to 1980 (see Table 1).<sup>6</sup> Since adoption of Ex Parte No. 385 dual sampling procedures in 1981, the exact sampling rate has been a function not only of the waybill

submission method used, but also the billing method chosen by the railroad. If the railroad chose the "hardcopy" method of reporting, the sampling rate would range between one and twenty percent. If the railroad chose the Machine-Readable-Input (MRI) submission method, the sampling rate would vary between 2.5 and 50 percent.

The billing method is also a determinant of sample size. As a railroad may bill local (or rebill interline received) multiple car movements as a series of single car moves, the sampling rate may be reduced. The reduction in the sampling rate will have no impact upon the quality of the population estimate, since the exact sampling rate for each record (population of the stratum from which the sample was drawn, divided by the sample count) is used. If the road, by virtue of its billing procedures, increases the population of a stratum, a larger sample will be drawn. Nevertheless, the proper population estimate can still be computed. Single car billing of multiple carload movements may alter calculated individual Waybill movement costs (as these single-car waybills will not receive multiple car costing adjustments).

While the "hardcopy" Waybill Sample is heavily comprised of single car waybills which produce a sampling rate of a little over 1.1 percent, the MRI roads collectively report a sample of nearly 3 percent (see Tables 2 and 3). As the percentage of MRI waybills increases, the overall Waybill sampling rate also increases.

Hardcopy to MRI conversion has had several positive effects upon the Waybill Sample, aside from the reduction in reporting costs borne by the railroad industry. Generally speaking, MRI waybills are more error free due to internal editing of the data by the railroads before the sample is submitted to the STB. Another effect of this MRI conversion has been a denser and more representative sample. In addition, the number of waybills in each year's sample was increased, due mainly to the more intensive sampling rates of the MRI waybills. During the period 1980 to 1995, the Waybill Sample size increased by nearly 175 percent, to over 495,000 waybills. Concurrently, the incidence of multiple car waybill reporting grew dramatically (see Figure 1).

The impact of the improved sample is also evident in the Waybill-to-FCS comparison. While the Waybill had fallen short in the past, it now exceeds the FCS total car loading and tonnage figures by a logical magnitude (see Figure 2). Due to this historical shortcoming, it was common practice to expand the 1972 to 1980 Samples by first multiplying them by 100 (the theoretical inverse of the "1 percent" Waybill sampling rate) and then create a second "FCS expansion" factor by comparing the expanded car loading, tonnage, and revenue figures from the Sample with those reported in the FCS data base by the Class I carriers. With the introduction of the MRI Sample, calculation of the FCS expansion factor was no longer necessary.

Another benefit of the new sampling methodology was the inclusion of data on each observation in the Sample which enables calculation of the exact sampling rate for each waybill movement. Comparison of the population count (from which the Sample was chosen) and the total number of records in each strata enable the user of the Sample to calculate the specific sampling rate rather than using the theoretical sampling rate which might lead to non-sampling bias when investigating small subsamples of the data.

## **Multiple Car Reporting**

As illustrated in Figure 1, multiple car movements were often reported on a "per car" basis prior to imposition of Ex Parte 385. This was due to the ICC's desire to obtain data (during the period of extensive railroad regulation) on a prorated per-car basis to more easily facilitate regulatory oversight. Prior to 1980, it was uncommon for two or more cars to be shown as billed on the one waybill in the Sample. Consequently, due to the changes in sampling methodology explained here and in the previous section, Sample data from 1972 through 1980 are not strictly comparable, in regards to shipment sizes, with data collected after 1981 under Ex Parte 385.

## Reported Revenues

The ICC states: "The Waybill Sample is a source of reliable and comprehensive information on rail carload freight traffic flows and characteristics."<sup>7</sup> Although the Sample is employed in a variety of planning studies, regulatory oversight is the prime purpose behind its collection. Both the Cost Recovery Percentage, required under Section 202 of the Staggers Act, and the output measure employed in the productivity adjustment to the Rail Cost Adjustment Factor, required under Ex Parte 290, are calculated from the Sample.

Within regulatory proceedings, while the ICC and STB have repeatedly allowed access to confidential Sample data, they have made it clear that the data's confidentiality must be maintained. While the ICC established a "Public Use" file, a truncated version of the Master Waybill Sample that excludes fields showing railroad, detailed equipment ownership, and detailed geographic information, they reaffirmed the necessity to retain any and all information which is confidential. Been focused on railroad rate changes.<sup>8</sup> In many of these analyses, revenue data from the STB's Waybill Sample have been employed. While significant changes occurred in the Sample in 1986 with respect to the reported revenue field, these events have not been generally reflected in recent literature.<sup>9</sup>

In response to railroad industry concerns regarding the potential release of sensitive contract rate information at a time when the ICC desired continued accuracy in revenue related data, the ICC altered its method of contract revenue data collection. Beginning with the 1986 Sample, railroads were allowed to disguise their contract revenues through factoring them by a scalar value at the three digit STCC level.<sup>10</sup> Carriers employing this contract revenue masking technique provide the STB with a table indicating that all waybills with a "calculated rate flag" have their revenues scaled up or down by the table factor corresponding to the waybill three digit STCC.

These contract revenue factor tables are highly confidential -- known only between the reporting railroad and the STB. Moreover, these data are utilized by the STB only for internal analyses. These factored values are never provided to the Sample contractor and are not reflected in reported revenues in either the Master or Public Use files. While carriers are not required to universally employ the contract confidentiality factor, it has been estimated that about two-thirds of all waybills in the Sample make use of this confidentiality mechanism. Hence, failure to understand the nature of revenues reported in the Sample may lead to erroneous conclusions.

In essence, the calculated rate flag method of data security allows railroads to mask contract revenues, while allowing the STB to internally utilize the most accurate contract rate data available in its calculation of the Cost Recovery Percentage and the Productivity Adjustment Factor to the Rail Cost Adjustment Factor. As a result, and based on one author's experience in working with railroads on reported revenues for contract traffic, revenue data derived from Sample files since 1986 are generally overstated due to use of this confidentiality mechanism. Coupled with rounded mileages, revenue per ton-mile figures for the period 1986 to date are not strictly comparable with those obtained from the period 1982-1985.<sup>11</sup>

Reported revenues can lead to serious shortcomings in analyses that process individual waybill records, as in shipment specific mode-choice models. As shown in Table 4, nearly identical movements of rail grain traffic can show very different implied rates. In the single-line, unit-train sample records of STCC 01137 from Oklahoma City BEA to Houston BEA shown in the table, revenues per car mile range from over \$3.00 to less than 10 cents.<sup>12</sup> The wide range of revenues for this traffic cannot be explained away by possibilities of differences in cost structures across railroads carrying the traffic, private car ownership for some of the moves, rate seasonality, or additional services performed for some of the moves -- the lower range revenues are not sufficient to cover crew, locomotive, and fuel costs. Although the movements shown in the table were selected from the Public Use File, freight revenue and carloads values from this version of the sample are identical to those of the corresponding records in the Master File. Only the

short-line rail distance differs across the two files - the Public Use File rounds to the nearest 10 miles while the Master File rounds to the nearest mile.

Mode-choice models that include freight rates as a factor affecting the choice, and use individual waybill record reported revenues as a rate proxy for the rail shipment, may get unrealistic results in mode selection, especially when the alternative mode's rate is calculated by formula. In models where that is the case, rail rates for the records described above would have the variability described above, while the alternative mode rate, calculated by formula, would have little or no variability.

One such mode-choice model is the Truck-Rail, Rail-Truck Diversion Model developed by Transmode Consultants, Inc. for the U.S. Department of Transportation (USDOT). This model can be used to estimate diversion from rail to truck using waybill sample records as inputs. As originally developed, the model estimates diversion by reading in selected fields from the Waybill Sample, selecting a rail rate proxy (reported revenue for carload traffic, calculated by a rate algorithm for intermodal), computing a truck rate proxy for the shipment, and computing both rail and truck non-transport logistics cost for the shipment. Total logistics cost for each mode are calculated as the sum of the freight charges and the non-transport logistics cost. The mode with the lowest total logistics cost is chosen as the winning mode.

The 1994 users manual for this model suggests ways to calibrate the model if there is diversion in the base case, that is, if traffic diverts to truck under existing truck costs. The suggestions, however deal only with the rail movements that appear over-priced to the point of diverting, not recognizing that there is also a rate problem with the under-priced traffic which was retained in the base case. The failure to adjust rates on the under-priced traffic along with the over-priced traffic could lead to scenario results that under-state diversion. Since its original development, USDOT has recognized that revenues on some traffic are understated and has calibrated the model to account for understated revenues on those waybill records as well as the original calibration for records with overstated revenues.

### **Billed Versus Actual Weight**

Freight weight statistics from the Waybill are based on billed rather than actual lading weights. Carloads may be weighed for a variety of reasons: for example, to ensure that minimum tariff weights are met, that equipment is not overloaded, and that the shipper receives a full load. However, in an increasing number of cases, weighing today is not required as other methods (i.e., shipment conditions) are available to ensure the requirements for proper rate application have been made.<sup>13</sup> Consequently, the STB has not required that actual weights be provided on all waybills as mandatory. While the absolute incidence of reporting actual weights fell from 23.9 percent of the waybills in the 1984 Sample to 17.4 percent in the 1994 Sample, the number of useable responses actually fell to slightly less than 14 percent of the 1994 Sample.<sup>14</sup> While the overall difference between billed and actual weights may be small, there does exist statistically significant variation among many individual commodities (see Table 5).<sup>15</sup> Consequently, the use of billed weights in certain types of waybill analysis can lead to biased conclusions for a variety of reasons. For one, tariff weight structures may change without a corresponding alteration in actual weight.

What is at issue is the degree to which Waybill Sample data may be utilized and still accurately reflect aggregate industry-wide activity. While it is clear that differences between actual and billed weight are minor, it is unwise to extrapolate weight related calculations to multiple decimal point levels of precision. Overall, failure to recognize issues related to billed versus actual weights may result in analysis measuring changes in billing methods and price application across time rather than the topic originally focused upon.

## **Freight Mandatory Rule 11**

With the cancellation of joint rates and the desire to receive quicker revenue settlements and remain competitive, railroads are increasingly making use of this accounting rule which allows them to rebill deregulated traffic. Apart from the rebill designation on the waybill, these waybills appear to be "local" movements. Use of rebilling can be illustrated in the high portion of waybill movements which appear to originate or terminate in the state of Illinois. Over the years, Illinois appeared to originate and terminate more carloads than the west coast states of California, Oregon, and Washington combined. In actuality, many of these movements involved long-distance traffic which was rebilled in Chicago. However, estimates of true commodity length of haul may be understated. As transcontinental shipments are often billed as two or more separate waybills, the Waybill Sample will not indicate a true representation of mini-bridge movements, although it will provide accurate estimates of import or export traffic.

Freight Mandatory Rule 11 rebilling has the effect of overstating tonnage and units (car loads and intermodal boxes) and understating the length of haul in the Waybill Sample. Each rebilled waybill record in the sample double counts the tonnage and units of the originating waybill. Although the total distance moved by rebilled traffic is captured in full, length-of-haul statistics are understated by showing a single shipment as two, shorter-haul, shipments. Ton-mile statistics from the sample, however, are not affected by rebilled traffic.

In order to determine the extent to which rebilling affects Waybill summary statistics, a methodology for determining what traffic in the sample is rebilled must be devised. To this end, we extended a methodology used by Manalytics, Inc. in a 1991 study on rubber-tired interchange.<sup>16</sup> Preliminary analysis using this methodology indicate that rebilling of intermodal units increased from 351,000 units in 1984 to 1,146,000 in 1994 (see Table 6). Over the same period, rebilled carload tonnage increased from five million tons in 1984 to forty-five million tons in 1994 (see Table 7).

The implications of rebilled traffic in the Waybill Samples must be considered when using them for analyses. For example, preliminary analysis of intermodal traffic from waybill samples for 1984 and 1994 indicates that the number of intermodal units moving 500 miles or less, increased by 1,006,000 units between the two years. After adjusting for apparent rebilling, however, the volume increase in this mileage block falls to 607,000 units. The same analysis shows that before adjusting for rebilling, the number of intermodal units moving 2,500 miles and over, decreased by 42,000 units between 1984 and 1994. When adjusted for rebilling, the data indicate an increase in volume for this mileage block of 273,000 units (see Table 8).

Without recognizing, and adjusting for, an increase in rebilled traffic over time, growth and modal share analyses will be biased, overstating growth and modal share in shorter lengths of haul and in total and understating growth and modal share in longer lengths of haul. (Modal shares measured in boxes or tonnage will be misstated whether classified by length-of-haul or in total. Measured in ton-miles, modal share will be misstated when classified by length-of-haul, but not in total.) Conversely, should railroad billing practices change due to mergers or changes in interline billing agreements and the trend in rebilling reversed, growth for shorter lengths of haul and in total would be understated and growth for longer lengths of haul would be overstated. Analyses that do not address the issue of rebilled traffic in the Waybill Sample are likely to lead to erroneous conclusions.

### **Adjustment for Intermodal Carloadings**

Intermodal traffic records captured in the Waybill Sample contain the number of intermodal units (boxes) and the number of cars for the waybills sampled. Because much of intermodal traffic is billed at single unit prices, some 90 percent of the intermodal records in the 1992 Sample were one box/one car combinations, even where the car contained multiple platforms. Because of the one-to-one box-to-car

billing demographics of intermodal traffic, the Waybill Sample overstates the number of intermodal cars moved during the sample period. Given the high incidence of one box/one car billing for intermodal traffic, analysis of the Waybill Sample to determine intermodal car utilization or intermodal car costing will be inaccurate. In order to address the overstatement of intermodal cars in the sample, a logical adjustment should be made for restating the number of intermodal cars in the sample before analysis is undertaken.

One methodology to adjust the number of intermodal cars in the sample was developed as part of a long term planning project for the Association of American Railroad's Research and Test Department. This methodology, applied to the 1992 Waybill Sample, adjusted the number of intermodal carloads by using the Universal Machine Language Equipment Register (Umler) car-type in the Waybill record and applying the number of platforms from the Umler Specification Manual. The number of cars on the waybill were adjusted to reflect the assignment of boxes to platforms rather than to cars. The adjustment assumed a platform utilization factor provided by the Research and Test Department and was applied only to the one box/one car intermodal records from the sample. The number of platforms assigned to each intermodal car was based on the Umler car-type specification of the waybill record. For records with Umler car-type 'P' (conventional intermodal cars) or 'Q' (lighter weight, low profile intermodal cars) showing more than one platform, an 80 percent platform utilization rate was assumed. Records with Umler car-type 'S' (double stack cars) were assigned an 88 percent platform utilization rate.

The effect of the adjustment methodology was to reduce 'P' cars in the Sample by 30 percent, 'Q' cars by 60 percent and 'S' cars by 70 percent.<sup>17</sup> Overall, intermodal carloads in the Sample were reduced by 43 percent. With the adjustment, statistics for number of boxes per car went from 1.07 to 1.53 for Umler 'P' cars, from 1.01 to 2.53 for Umler 'Q' cars and from 1.34 to 4.54 for Umler 'S' cars (see table 9).

To test the validity of the adjustment process, sample data for unadjusted and adjusted car-miles were compared with data reported in railroad 1992 R-1 reports to the ICC. Table 10 shows how the intermodal car count adjustment affected the number of carloads in the sample and how the adjusted numbers compare with data reported in the R-1 annual reports. Before adjustment, intermodal car-miles accounted for 42 percent of total car-miles in the sample. After adjustment, intermodal car-miles accounted for 28 percent of total car-miles. The percentage of intermodal car-miles reported by Class I railroads in R-1 annual reports to the ICC for 1992 was 26 percent of total car-miles.

## CONCLUSIONS

Collected for regulatory purposes by the ICC (now the STB), the Carload Waybill Sample receives broad application of use in rate cases, development of costing systems, productivity studies, market dominance and merger studies, and deregulatory evaluations. In addition, the sample is often used as a tool for studies of rail traffic demographics. Due to flexibility in billing methods and reporting procedures for contract rates, results of these secondary type of analyses can be misleading if the analyst does not recognize the effects that reporting procedures may have on the data integrity of the fields being analyzed.

Waybill samples have been collected for nearly a century. Since 1946, a continuous sample of all carload traffic has been taken on an annual basis. Beginning in 1981, the Waybill sampling methodology was modified to improve the sample's quality with respect to the regulatory purposes for which it is collected. In addition to providing more expansive and higher quality data, the improvements from Ex Parte No. 385 allowed both the rail industry and the ICC (and STB) to reduce costs associated with this data collection process.

Although the Waybill Sample contains a plethora of rail demographic data, care must be exercised in its use beyond the primary reason for its collection. When properly interpreted, the data can be helpful in detailing the current rail industry and general trends in the industry when compared across years.<sup>18</sup>

However, due to variations in billing and submission methods which may occur across years, studies requiring extreme precision and consistency, such as those related to productivity analyses, do not lend themselves to use of the Waybill Statistics. Common areas of misunderstanding in applying the sample to analyses include: the effects of calculated rate flag reporting on freight revenue analysis; the effects of Freight Mandatory Rule 11 rebilling on volume and flow analyses; and the effects of intermodal billing practices on carload volumes of intermodal traffic.

DECREASED USE OF SINGLE CAR BILLING HAS INCREASED THE INCIDENCE OF MULTIPLE CAR WAYBILLS SINCE 1980

FIGURE 2

THE WAYBILL SAMPLE ACCURATELY REFLECTS RAILROAD ACTIVITY

## APPENDIX B: TRAIN II

The TRAIN II system was developed from the need for industry-wide control of car location and utilization to enable better management of the car fleet. It is used to monitor the full movement cycle of equipment from the time it is loaded to the time it is unloaded and returned to its owner. The system provides up-to-date information on railroad car locations and increases the flow of the car fleet industry-wide.

TRAIN II input includes:

- Placements
- Loading Reports
- Origin and Destination Reports
- Interchanges
- Regional Boundary Crossings
- Arrivals at Destination
- Unloadings
- Bad Order Storage/Hold Reports
- Empty Car Destination Reports
- Car Grade Inspections
- Early Warning Inspections
- ETA (Estimated Time of Arrival)
- Ramped and Deramped
- Shipper Rejection Reasons

With the TRAIN II system, a railroad can request a status (location) on any car and Railinc will respond with the latest data. This is done in a real-time environment. Parameter Trace and Service Monitoring provides tracing without a need to query or otherwise know the equipment initial and number. A parameter record (TRAIN17&18) containing selection criteria will be matched against every Waybill which contains the requesting road in the route. If a match is found, car movement and interchange data (TRAIN76) will be sent to the requesting road until that loaded cycle is complete. Data can be furnished in batch (every 30 minutes) or real-time (as received at Railinc).

Interchange Reports are sent to Railinc using a TRAIN10, TRAIN01 or TRAIN31 message and inform the TRAIN II System of the exchange of freight equipment between railroads. Use of the TRAIN10 syntax is encouraged. The TRAIN10 is the most comprehensive of the event reporting messages and includes new features not available in TRAIN01/31 messages.

## APPENDIX C

This example details how events from a trip are selected to mile a waybill in the sample.

This waybill sample record shows a movement from Laredo, TX to Chicago, IL on Railroad #2.

Origin Railroad	Origin SPLC	Destination Railroad	Destination SPLC	Waybill Route
<b>Railroad #2</b>	TX, US	<b>Railroad #2</b>	IL, US	TX, US- <b>Railroad #2</b> -IL,US

All of the event data for the trip is pulled to start the process. The trip that this waybill matched was from Texas to Illinois. The trip started with a released load (RLOD) event on Railroad #1 and ended with a placement actual (PACT) on Railroad #4. The Railroad #2 waybill reported in the sample represents the Railroad #2 portion of the trip.

The events highlighted in yellow in the Event Data table are selected as the SOT and EOT events for calculating miles for the Railroad #2 waybill sample record shown above. In this example, multiple matches are available for the SOT and EOT. The earliest reported best match is used. All of the event in yellow and grey are paired and miled to create the total miles for this waybill.

### Event Types

EVENT_CODE	EVENT_DESC
ICHD	INTERCHANGE DELIVERY
ICHR	INTERCHANGE RECEIPT
RLOD	RELEASE LOAD
PFPS	PULL FROM PATRON SIDING
ARRI	ARRIVAL AT FINAL DESTINATION
ARIL	ARRIVAL INTRANSIT
PACT	PLACEMENT-ACTUAL
DFLC	DEPARTED FROM LOCATION

## ENDNOTES

- \* The views expressed in this paper are solely those of the authors and may not reflect the views of the Association of American Railroads or its members.
1. The Surface Transportation Board assumed responsibility for collection of the Waybill Sample from the Interstate Commerce Commission on January 1, 1996.
  2. The last TRINCS was published in 1984 and contained 1983 data.
  3. For an extensive discussion of the Waybill Sample, see Wolfe (1986).
  4. Section 202 of the Staggers Act.
  5. The Waybill is employed to create a revenue weighted output index. Refer to Ex Parte 290 (Sub-No. 4) Railroad Cost Recovery Procedures - Productivity Adjustment; served March 24, 1989, decided March 22, 1989.
  6. Estimated from comparisons between Freight Commodity Statistics and expanded Waybill Sample data (for Class I carriers only) for involved years.
  7. ICC, Ex Parte 385 (Sub-No. 3) p. 1. Service date, January 31, 1990.
  8. Refer to Babcock (1981), Babcock et. al. (1985), Chow (1986), Fuller et. al. (1983, 1987), and MacDonald (1987)
  9. For example, Fuller et. al. (1990) made use of 1983 to 1988 data (p.267)
  10. ICC, Ex Parte 385 (Sub-No. 2). Service date, January 8, 1986. The same procedure applies to line haul, miscellaneous, and transit revenues.
  11. The Sample's collection methodology was substantially altered in July of 1981. Data from before that time tended to exclude multiple car movements. Masking of contract rates through confidential scalar factors began in 1986. Refer to Wolfe (1986, 1991).
  12. There are more extreme ranges of grain movement revenue-per-car-mile by origin-destination pair, with spreads exceeding \$10.00, in waybill samples than presented in the table. The traffic included in the table was selected because of the volume of traffic it represents, over 13,000 carloads.
  13. Shipment conditions are standardized terminology employed to ensure that the circumstances required in the rate have been met (e.g., the movement took place in a particular type of car, owned by a particular party, interchanged at a particular gateway, etc.). In lieu of physically weighing the car, shipment conditions referring to loading a car "full visible capacity" are often employed to ensure proper rate application.
  14. To facilitate a better comparison across years, multiple platform cars were excluded from this analysis. While only accounting for 56 instances (out of over 80,000) in the 1984 Sample where both actual and billed weights were provided, they accounted for 16,734 instances (out of 82,769) in the 1994 Sample. Exclusion was necessary as several carriers either bill or rebill intermodal movements on the basis of one unit per car. Consequently, comparison of per "car" weights between waybills employing articulated intermodal equipment and those using other equipment (or billing practices) would lead to incorrect (downwardly biased) conclusions.

15. Results reported in Table 5 indicate where differences in group means were statistically significant at least at the .05 level (i.e., group means were statistically different at either the .01 or .05 level).
16. The methodology developed for this study involved matching waybill records moving within a 10 day spread of each other in the same intermodal box, of the same general commodity description and weight, which appeared to be a single movement which had been rebilled at a common interchange point. For this paper, the methodology has been extended to include carload traffic.
17. It should be noted that a number of intermodal records in the Sample have been assigned "dummy" car marks in lieu of the identifying mark for the car that the shipment actually moved on. In the 1992 Sample, 24% of the intermodal records showed one of four cars (TTX 000105, TTWX 971346, SOU 050100, TTWX 972800). All of these cars are 'P' cars with a first numeric between 5 and 8, and are thus assigned two platforms in the adjustment methodology.
18. Waybills collected during the period 1972 through 1981 are not strictly comparable with ones collected since Ex Parte No. 385 due to the under-reporting of multiple car shipments from the earlier years.
