

Optimal Investment in Rail Infrastructure: The Divergence of Public and Private Interests

STB Vice Chairman Francis P. Mulvey

Electric Utility Consultants Inc. Mesa, Arizona March 28, 2006

Introduction

Transportation & the National Economy

- Drivers of Transportation Demand
 - Economic Activity
 - Population
 - Globalization

Transportation Supply

- Public Private Provision
 - Private: Rail, Pipelines
 - Public: Roads, Airports, Port facilities
- Historic Pattern: Supply preceded and shaped demand
- Today: Respond to crises

- Affect both shippers and passengers
- TTI annual studies document the problem is getting worse?
- Congestion caused
 - 3.7 Billion hours of travel delay
 - 23 Billion gallons of wasted fuel consumption
- Travel during peak hours takes 40% longer than during off-peak
 - In 1982, it took 13% longer

- More than 2/3rds of all travel during peak periods occurs in congested conditions
 - Compared to 1/3rd in 1982
- Roughly 60% of major roads are congested at peak times
- Length of congested period has grown from 4.5 to 7 hours
- Travel time reliability is greatly reduced
 - And it will get worse

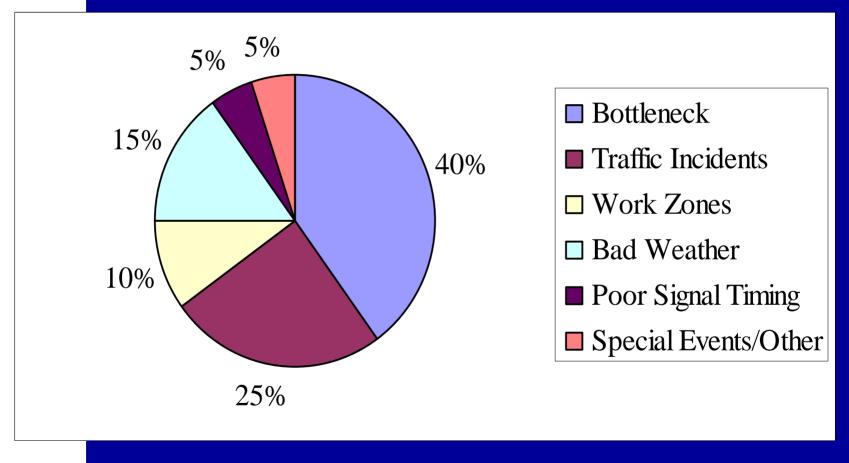

By 2025...

- Population will increase by 26%
- GDP will approximately double
- Total passenger travel will rise 72%
- Truck tonnage will grow 75% by 2020

Sources of Congestion

• Investment in urban transport infrastructure inadequate to meet demand

• To maintain current levels, 5000 additional lane miles of roads required

• Major trans projects take 10-15 years from conception to completion

• Some progress being made – under TEA-21 highway spending grew and more roads were improved

 However, >50% of spending went to system preservation

- Problem not limited to highways
- Ports dealing with larger vessels and rapidly expanding international trade
- Rail capacity problem is of more recent vintage
- Economic regulation fostered excess capacity, especially for railroads

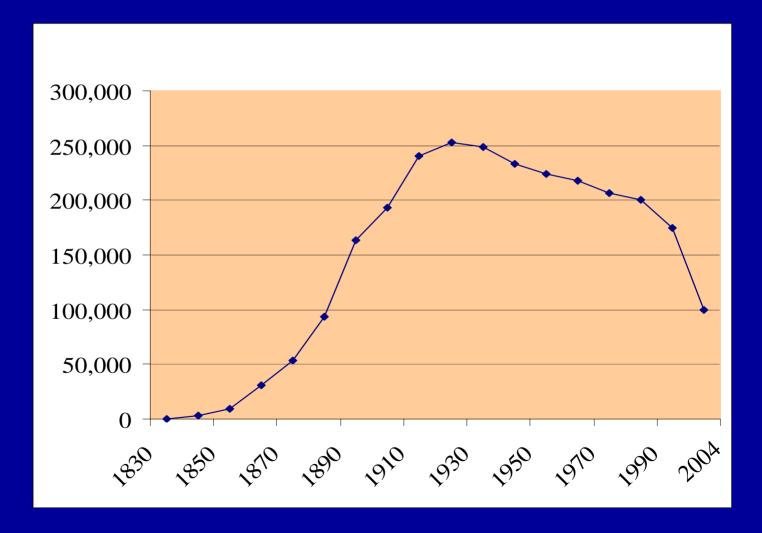

The Developing Rail Capacity Crisis

- Shrinking workforce and infrastructure partially offset by productivity improvement but... continuous increase in traffic begins to absorb "excess capacity"
- Network becomes more vulnerable to stochastic events
- A "perfect storm" or the rail version of global warming

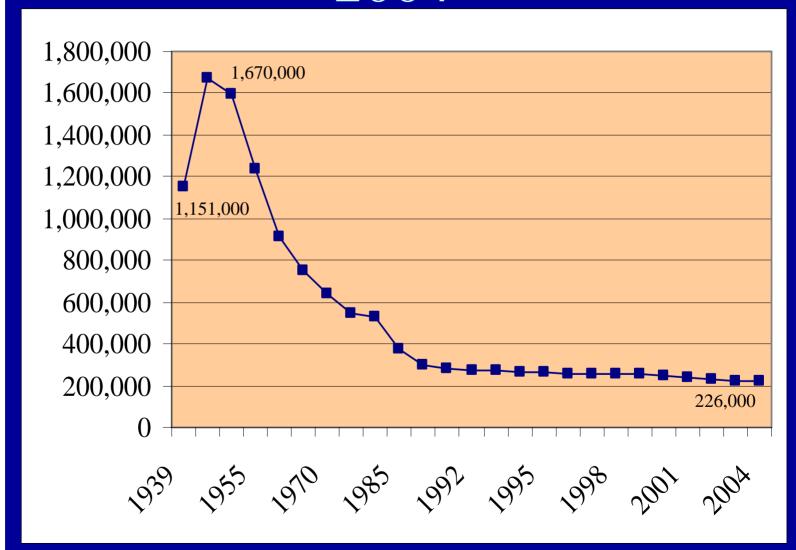

Growth & Decline of Class I Railroad Mileage

Railroad Employment 1939-2004

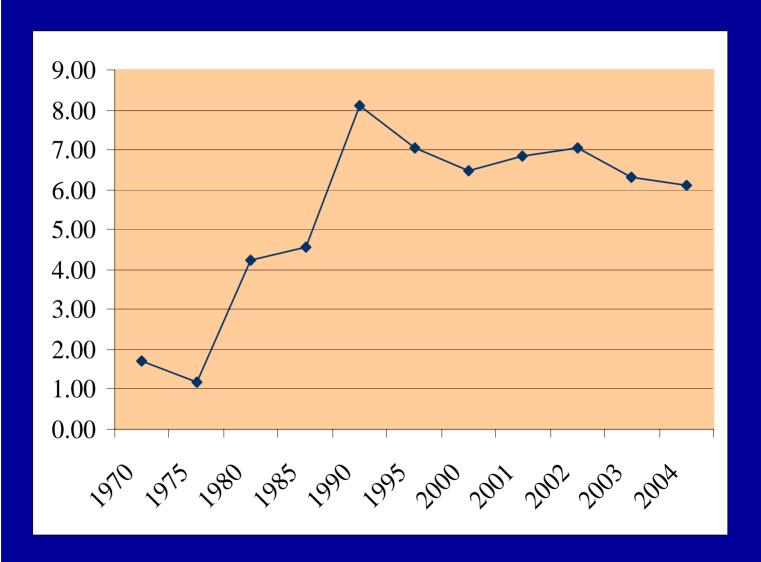

The Genesis of the Railroad Capacity Problem

- Improved earnings yet not revenue adequate
- RR's 'punished' by Wall Street for making capital investments
- RR's often found that infrastructure investments failed to generate sufficient income
- L/T strategy to reduce size of workforce
- Added rail infrastructure is long-lived while demand increases can be short-lived

Railroad ROI 1970-2003

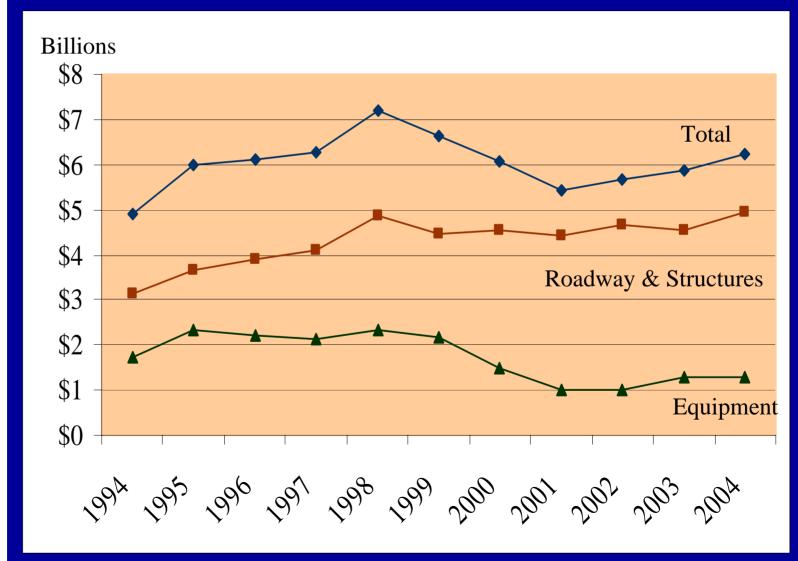

Short-term Capacity Problems

- Expanding economy lead to surge in imports
- Large grain harvests in 2003-2004
- Growth in export coal market
- Crew shortages due to wave of retirements
- Equipment shortages due to reduced purchases
- Cutbacks in capital spending programs
- Tight capacity in trucking industry

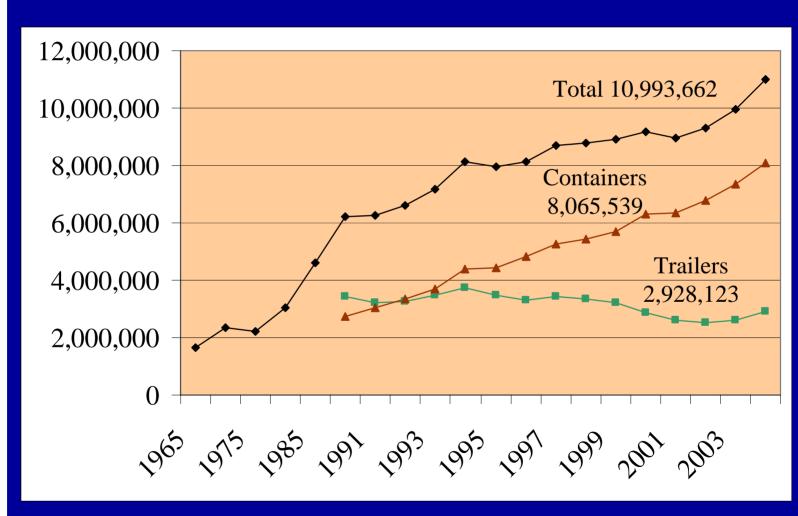

Class I Capital Expenditures 1994 - 2004

Intermodal Shipments Beginning 1965

Carrier Responses to Recent Capacity Problem

- More railcars and locomotives purchased and leased
- Accelerated hiring and training of crews
- Some infrastructure expansion efforts
- Price rationing of available capacity
- RR's choosing who they will serve and the common carrier obligation

Common Carrier Obligation

- 49 USC § 11101. Common carrier transportation, service, and rates
- (a) A rail carrier providing transportation or service subject to the jurisdiction of the Board under this par shall provide the transportation or service on reasonable request.
- (b) A rail carrier shall also provide to any person, on request, the carrier's rates and other service terms. The response by a rail carrier to a request for the carrier's rates and other terms shall be—
 - (1) in writing...prompt
 - (2) ...made available in electronic form

Exempt Commodities

- 49 CFR §1039.10 Exemptions of agricultural commodities except grain, soybeans and sunflower seeds
 - Farm products
 - Fresh fish, meat, poultry
- 49 CFR §1039.11 Miscellaneous commodities exemptions
 - Many commodities included
 - Examples: Sand/Gravel, Rubber or Misc.
 plastics, motor vehicles, Rock salt, Scrap paper

Long-term Rail Capacity Constraint Factors

- Demand for freight rail projected to grow by 60-70% over next two decades
- RR's inability to earn cost of capital
- Pressure from Wall Street to reduce capital costs and improve ROI
- Long-term contracts limit RR pricing flexibility
- RR's tend to bid L/T contract rates down

Approaches to the Transportation Congestion Problem

- Build more physical infrastructure
- Adopt technological innovations
 - Can RR's do this and maintain profitability?
- Better utilize existing facilities
- Promote shipper/traveler behavioral changes
- Public/Private Partnerships

 All have potential but all have limits

Infrastructure Capacity

- SAFETEA-LU 2 years late, \$90 Billion short
- \$286.5 Billion over 6 years
 - 38% more than TEA-21 in 1998
 - Far short of \$375 Billion estimated need
- Contains rail title but far from intermodal legislation
- Expands the RIFF program to \$35 Billion, *makes shippers eligible*

Rail Capacity Investment

- RR's support limited public sector role
- Public/Private partnerships
 - Alameda Corridor
 - CREATE
- RR Trust Fund concept
- Investment Tax Credits
 - Short Lines 286K car issue
 - Class I access and limited fiscal capacity
- RIM and RIFF

Obstacles

- Dollar resources
- Resistance to change
- Labor contracts
- Ineffective lobbying efforts to address freight transportation needs

Need to Focus on Freight Issues & Intermodal Solutions

- Reauthorization of highway program is only 4 years away
- Increase visibility of freight issues
- Install a comprehensive evaluation process (i.e. c/b analysis) within in the planning process
- Address limitations on federal funding that dedicates \$ to a single mode or non-freight purposes

Thank you. Questions?
